UiPath Certified Professional Automation Business Analyst Professional v1.0 Sample Questions (Q167-Q172):

NEW QUESTION # 167

What event can affect selector reliability in automations?

- A. Automation target applications being updated
- B. An increase in the volume of transactions
- C. An update to the UiPath Robot running the automation
- D. Target applications changing their position on the screen

Answer: A

Explanation:

An event that can affect selector reliability in automations is the target applications being updated. Updates to applications can alter the UI elements and structures that selectors depend on, leading to failures in identifying these elements during automation execution. UiPath Documentation on Selector Reliability at <https://docs.uipath.com/>.

NEW QUESTION # 168

In UiPath Studio ReFramework, what can be the output from the Process Transaction state?

- A. Success, Fail, Paused
- B. Success, Waiting for input, Business Exception
- C. Success, Business Exception, System Exception
- D. Success, Error

Answer: C

Explanation:

In UiPath Studio's ReFramework, the outputs from the Process Transaction state can be Success, Business Exception, or System Exception. This classification helps in handling different outcomes of transaction processing effectively-Success for transactions completed without issues, Business Exception for errors related to the business logic, and System Exception for errors related to the system or application. References:

UiPath Documentation on ReFramework at <https://docs.uipath.com/>.

NEW QUESTION # 169

Which of the following factors most influences the complexity of a process proposed for automation?

- A. The speed of the process
- **B. The number of steps involved**
- C. The level of automation
- D. The number of people involved

Answer: B

Explanation:

The complexity of a process proposed for automation is most influenced by the number of steps involved. A higher number of steps typically indicates a more complex process, as it may involve multiple decision points, variations, and interactions with different systems or applications. Complexity can be defined by factors such as the number of applications/systems, the frequency of human intervention, or the number of steps required to execute the task. Processes with fewer steps are generally easier to automate because they are simpler and have fewer variables to manage during the automation.

NEW QUESTION # 170

What is same-screen detection for actions recorded in an UiPath Task Capture diagram?

- A. Prior to starting the capture process, Task Capture analyzes the applications used and groups them by similarity of appearance, so that during the recording the screenshots will be automatically grouped
- B. During the capture process Task Capture automatically detects actions that contain similar screenshots and also merges them
- **C. After finishing the capture process, Task Capture offers to detect actions per all documents that contain similar screenshots and also offers to merge them. The actions can also be manually reviewed prior to merging**
- D. After finishing the capture process, Task Capture offers to detect actions per all documents that contain similar screenshots and also offers to merge them. The merge is automatic, thus making the process fast and efficient

Answer: C

Explanation:

In an UiPath Task Capture diagram, same-screen detection for actions recorded is described by the feature where after finishing the capture process, Task Capture offers to detect actions per all documents that contain similar screenshots and also offers to merge them. The actions can also be manually reviewed prior to merging. This feature ensures that similar actions are grouped, enhancing the clarity and efficiency of the process documentation.

Reference: UiPath Documentation on Task Capture at <https://docs.uipath.com/>.

NEW QUESTION # 171

What is the purpose of creating an AS IS process map during the business analysis phase for RPA?

- **A. To understand the current state of the business process**
- B. To design the automation solution
- C. To identify potential automation opportunities
- D. To evaluate the feasibility of the automation solution

Answer: A

Explanation:

The purpose of creating an AS IS process map during the business analysis phase for RPA is to understand the current state of the business process. This mapping is crucial as it provides a detailed visualization of the process as it currently operates, including all

NEW QUESTION # 172

Our company has employed a lot of leading experts in the field to compile the UiPath-ABAv1 exam torrents, so you can definitely feel rest assured about the high quality of our UiPath-ABAv1 question torrents. On the other thing, the pass rate among our customers who prepared the exam under the guidance of our UiPath-ABAv1 Study Materials has reached as high as 98% to 100%. What's more, you will have more opportunities to get promotion as well as a pay raise in the near future after using our UiPath-ABAv1 question torrents since you are sure to get the certification.
