NEW QUESTION # 225

In many places 24 V AC has been popular as a power source but now 12 V and 24 V DC is increasing in popularity because

- A. There is less power loss in cables with DC.
- **B. It is easier to back-up DC with battery.**
- C. There is more energy in DC.
- D. There is less risk for surge with DC.

Answer: B

Explanation:

12 V and 24 V DC power sources are becoming increasingly popular compared to 24 V AC because it is easier to back-up DC with batteries. DC power systems can be directly connected to battery backup systems without the need for conversion, making the implementation simpler and more reliable during power outages. This efficiency in backup capability is one of the primary reasons for the shift from AC to DC in many applications, including surveillance systems. NEW QUESTION # 226

Which statement is true regarding H.264 and Motion JPEG?

- A. Bandwidth savings using H.264 has nothing to do with frame rate, only scene complexity
- B. Bandwidth savings using H.264 has nothing to do with frame rate, only Group of Video (GOV) setting
- C. The highest bandwidth savings using H.264 compared to Motion JPEG is at low frame rates
- **D. The highest bandwidth savings using H.264 compared to Motion JPEG is at high frame rates**

Answer: D

Explanation:

H.264 compression technology is designed to be more efficient than Motion JPEG, especially at higher frame rates. This is because H.264 uses inter-frame compression, which reduces redundancy by encoding differences between successive frames, leading to significant bandwidth savings. Motion JPEG, on the other hand, compresses each frame independently, resulting in higher bandwidth usage. [Reference: Axis Communications - Video Compression Technologies]
