CCE Global Counselor Preparation Comprehensive Examination (CPCE) Sample Questions (Q100-Q105):

NEW QUESTION # 100

Parametric statistics assume the population data are

- A. multivariate.
- B. relatively invariant.
- C. normally distributed.

Answer: C

Explanation:

Parametric statistics require that the data in the population from which samples are drawn are normally distributed. Other assumptions may include interval or ratio level measurement and homogeneity of variance, but the normality assumption is central. Reference: Helwig, A. A. (2020). CPCE Study Guide and Review; Royse, D., Thyer, B. A., & Padgett, D. K. (2016). Program Evaluation: An Introduction.

NEW QUESTION # 101

During a counseling session, a client who is notably upset about spousal extramarital affairs discloses ownership of a gun and intention to make the spouse pay. In this case, a professional counselor would be expected to

- A. follow federal guidelines for reporting a homicidal client.
- B. arrange an additional session to evaluate the client's lethality.
- C. warn others of the client's intentions to do harm.

Answer: C

Explanation:

When a client discloses an intention to harm someone, counselors are ethically and legally required to take reasonable steps to warn the potential victim and/or notify authorities. This is known as the "duty to warn" (from the landmark Tarasoff v. Regents of the University of California case). The counselor must breach confidentiality if there is a clear threat of violence to an identifiable person. Reference: Helwig, A. A. (2020). CPCE Study Guide and Review; American Counseling Association (ACA) Code of Ethics (2014).

NEW QUESTION # 102

In group counseling, a "closed group" is one that:

- A. Allows new members to join at any time
- B. Does not allow new members after the group begins
- C. Is open only to specific populations

Answer: B

Explanation:

A closed group means membership is fixed once the group starts; no new members are added during the group process. This structure helps develop group cohesion and trust over time.

Reference: Helwig, A. A. (2020). CPCE Study Guide and Review; Corey, G. (2015). Theory and Practice of Group Counseling.

NEW QUESTION # 103

What is the most likely impact of exposure to adverse childhood experiences (ACEs) in adulthood?

- A. increased risk of physical, social, and emotional problems

- B. increased risk of posttraumatic stress disorder
- C. increased likelihood of resilience

Answer: A

Explanation:

Exposure to adverse childhood experiences (ACEs) has been strongly linked to an increased risk of physical, social, and emotional problems in adulthood, including chronic health conditions, substance abuse, mental illness, and difficulties in relationships and functioning.

Reference: Helwig, A. A. (2020). CPCE Study Guide and Review; Centers for Disease Control and Prevention (CDC) ACEs Study.

NEW QUESTION # 104

Which research design involves collecting data at a single point in time to assess prevalence?

- A. Longitudinal
- B. Experimental
- C. Cross-sectional

Answer: C

Explanation:

Across-sectional design collects data from a population at one specific time point to examine the prevalence or characteristics of variables. This design contrasts with longitudinal studies that collect data over time. It is commonly used in counseling research to describe current states.

Reference: Helwig, A. A. (2020). CPCE Study Guide and Review; Creswell, J. W. (2014). Research Design.
