

Pass Guaranteed Quiz CTFL-AT - Accurate ISTQB Certified Tester - Foundation Level Extension - Agile Tester Valid Dumps

P.S. Free 2025 ISQI CTFL-AT dumps are available on Google Drive shared by TestKingFree: <https://drive.google.com/open?id=1bN-vaFrCXVj50wW-NkZShBIC55jMYCqL>

Managing time during the ISQI CTFL-AT exam is a challenging task. Most candidates cannot manage their time during the ISQI CTFL-AT exam, leave the questions, and fail. Time management skills can help students gain excellent marks in the CTFL-AT Exam. ISQI CTFL-AT practice exam on the software help you identify which kind of CTFL-AT questions are more time-consuming, and they would be able to assess their efficiency in answering questions.

ISQI CTFL-AT Certification Exam is a valuable certification for software testers seeking to advance their careers in agile testing. CTFL-AT exam covers essential topics in agile development processes and methodologies and requires a deep understanding of the testing process. ISTQB Certified Tester - Foundation Level Extension - Agile Tester certification serves as an indicator of an individual's expertise and commitment to continuous learning and professional development.

CTFL-AT Latest Braindumps Sheet - Reliable CTFL-AT Test Questions

We have a team of experts curating the real CTFL-AT questions and answers for the end users. We are always working on updating the latest CTFL-AT questions and providing the correct CTFL-AT answers to all of our users. We provide free updates for one year from the date of purchase. You can benefit from the updates CTFL-AT Preparation material, and you will be able to pass the CTFL-AT exam in the first attempt.

Achieving the ISQI CTFL-AT certification is a valuable asset for professionals working in agile software development projects. It demonstrates a strong understanding of agile principles and practices, and it can lead to career advancement opportunities and higher salaries. Overall, the ISQI CTFL-AT certification exam is an excellent opportunity for professionals looking to enhance their skills and knowledge in agile testing.

ISQI CTFL-AT (ISTQB Certified Tester - Foundation Level Extension - Agile Tester) certification exam is designed for software testers who want to validate their knowledge and skills in agile testing. ISTQB Certified Tester - Foundation Level Extension - Agile Tester certification is an extension of the ISTQB Foundation Level certification and focuses on agile methodologies and practices. The CTFL-AT Certification Exam is a globally recognized certification, and it is regarded as one of the most sought-after certifications in the software testing industry.

ISQI ISTQB Certified Tester - Foundation Level Extension - Agile Tester Sample Questions (Q22-Q27):

NEW QUESTION # 22

You are a tester in an agile team. The user story you are due to test is still under development so your tests are blocked. The main issue holding progress on this user story is that the developer's unit tests are constantly failing. As an agile tester, which of the following actions should you take?

- A. Work together with the developer, suggesting reasons why the tests are failing.
- B. Review the design of the problematic user story and improve it where possible.
- C. Use the time to improve and automate existing test cases of other user stories.
- D. Create a bug report for each of your blocked tests.

Answer: A

Explanation:

As an agile tester, you should work together with the developer, suggesting reasons why the tests are failing.

This is an example of the agile principle of collaboration and communication within the team, as well as the agile testing practice of early and frequent feedback. By working together with the developer, you can help to identify and resolve the root causes of the test failures, as well as share your testing knowledge and perspective. This can lead to faster and better quality delivery of the user story, as well as improved team relationships and trust.

Option A is not a good action, because reviewing and improving the design of the user story is not the tester's responsibility, and it may not address the test failures. Option B is also not a good action, because creating bug reports for blocked tests is not an agile way of handling issues, and it may create unnecessary overhead and waste. Option D is not a good action, because it does not help to unblock the current user story, and it may distract you from the sprint goal and the team's focus.

NEW QUESTION # 23

Which of the following statements about test automation and regression risk in Agile projects is true?

- A. Technical debt is due to manual testing and it cannot be present when the team implements test automation
- B. Automated unit tests are generally not run with each code check-in as they take longer to run than automated acceptance tests and could slow down the code check-in process
- C. Test automation can help to manage regression risk since it allows the running of regression test suites within each iteration
- D. Regression risk is reduced when there is a high degree of code changes being applied from one iteration to the next

Answer: C

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

From CTFL-AT Syllabus v4.0, Section 4.3 Test Automation and Continuous Integration, it states:

"Automated tests help detect regression defects quickly and can be run frequently during development, thus reducing regression risk." So, Option D is correct - test automation supports regression testing within iterations, making it an essential Agile practice.

* Option A is false - automated unit tests are designed to be fast and are ideally run with every check-in.

* Option B is incorrect - more code changes increase, not reduce, regression risk.

* Option C is incorrect - technical debt can still exist with automation if the automation is poorly designed or not maintained.

References:

CTFL-AT Syllabus v4.0, Section 4.3

Learning Objective (K2) - Understand how automation supports regression testing

NEW QUESTION # 24

What is the definition of agile software development?

- A. A group of software development methodologies based on iterative incremental development with self-organizing cross-functional teams who cooperate to define requirements and to implement the solution.
- B. A framework to describe the software development lifecycle activities from requirements specification to maintenance where test planning of the various test levels is done as soon as the test basis is ready
- C. A way of developing software where the test cases are developed, and often automated, before the software under test is developed.
- D. Testing carried out informally where no formal test preparation or execution takes place, no recognized test design technique is used and there are no expectations for results.

Answer: A

Explanation:

Explanation

Agile software development is a term that encompasses a group of software development methodologies that are based on iterative incremental development, where requirements and solutions evolve through collaboration between self-organizing cross-functional teams. Agile methods promote adaptive planning, evolutionary development and delivery, a time-boxed iterative approach, and encourage rapid and flexible response to change. Some examples of agile methods are Scrum, Extreme Programming (XP), Kanban, and Lean Software Development. References:

2: ASTQB Agile Tester Certification Resources, Agile Testing Foundations, Chapter 1, Section 1.1.1

NEW QUESTION # 25

Which of the following tools would you expect to be the most useful to report defects found during exploratory testing sessions in Agile projects?

- **A. Tools that capture and log activities performed on an application during its use**
- B. Continuous integration and build distribution tools
- C. Application lifecycle management (ALM) and task management tools
- D. Tools that generate data to populate an application's database

Answer: A

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

From CTFL-AT Syllabus v4.0, Section 3.1 Exploratory Testing:

"Exploratory testing benefits from tools that record tester activity, allowing the tester to reproduce and document issues found during unscripted testing sessions." Option D is correct - activity capture tool helps testers log, replay, and report findings effectively in exploratory sessions.

* Option A is for test data preparation, not reporting.

* Option B is related to integration, not exploratory testing.

* Option C helps track tasks but lacks session capture features.

References:

CTFL-AT Syllabus v4.0, Section 3.1

Learning Objective (K2) - Use appropriate tools during exploratory testing

NEW QUESTION # 26

You have been asked to execute an exploratory testing session on Park & Ride system. The test charter has been titled as "Buy a bus ticket". As a result, a number of defects were reported, the titles of which are listed below.

Which defect is out of scope for the given test charter?

- A. Failed to buy a bus ticket after 18:00.
- **B. Payment for parking ticket is restricted to cash only (no credit card supported).**
- C. Price for a bus ticket was calculated incorrectly.
- D. Failed to buy a bus ticket when the network connection to the Central System is down.

Answer: B

Explanation:

Explanation

The test charter for the exploratory testing session is focused on buying a bus ticket, not a parking ticket.

Therefore, any defect related to the payment for parking ticket is out of scope for the given test charter. The other defects are related to the functionality, usability, or reliability of buying a bus ticket, which are in scope for the test charter.
