High Pass-Rate 156-315.81 Premium Exam | Amazing Pass Rate For 156-315.81: Check Point Certified Security Expert R81 | Professional 156-315.81 Valid Exam Prep

Try our best to get the related 156-315.81 certification is the best way to show our professional ability, however, the exam is hard nut to crack and there are so many 156-315.81 preparation questions related to the exam, it seems impossible for us to systematize all of the key points needed for the exam by ourselves. We would like to help you out with the 156-315.81 Training Materials compiled by our company. There are so many strong points of our 156-315.81 training materials, you will be bound to pass the 156-315.81 exam with high scores.

CheckPoint 156-315.81 Exam is a challenging and comprehensive certification exam that is designed to test the skills and knowledge of IT professionals in the field of network security. By passing the exam and earning the Check Point Certified Security Expert R81 certification, IT professionals can demonstrate their expertise and commitment to the field, and elevate their careers to the next level.

CheckPoint Check Point Certified Security Expert R81 Sample Questions (Q460-Q465):

NEW QUESTION # 460

After making modifications to the \$CVPNDIR/conf/cvpnd.C file, how would you restart the daemon?

- A. cvpnrestart
- **B. cvpnd_restart**
- C. cvpnd_restart
- D. cvpnd restart

Answer: B

Explanation:

The cvpnd_restart command is used to restart the daemon after making modifications to the \$CVPNDR/conf/cvpnd.C file. The cvpnd daemon is responsible for managing the communication between the Check Point components and the Content Vectoring Protocol (CVP) server. The CVP server is an external server that provides content inspection and filtering services for Check Point gateways. The \$CVPNDR/conf/cvpnd.C file contains the configuration settings for the cvpnd daemon, such as the CVP server IP address, port number, timeout value, and debug level. Reference: Check Point Security Expert R81 Course, Content Inspection Using ICAP, cvpnd daemon debug file

NEW QUESTION # 461

What solution is Multi-queue intended to provide?

- A. Reduce the confusion for traffic capturing in FW Monitor
- B. Reduce the performance of network interfaces
- **C. Improve the efficiency of CoreXL Kernel Instances**
- D. Improve the efficiency of traffic handling by SecureXL SNDs

Answer: C

NEW QUESTION # 462

Which command gives us a perspective of the number of kernel tables?

- A. fw tab -t
- B. fw tab -n
- **C. fw tab -s**
- D. fw tab -k

Answer: C

Explanation:

The command "fw tab -s" is used to display information about the state of various kernel tables in a Check Point firewall. It provides a perspective on the number and status of these tables, which can be helpful for troubleshooting and monitoring firewall performance. Option B correctly identifies the command that gives a perspective of the number of kernel tables, making it the verified answer. References: Check Point Certified Security Expert (CCSE) R81 documentation and learning resources.

NEW QUESTION # 463

What is the amount of Priority Queues by default?

- A. There is no distinct number of queues since it will be changed in a regular basis based on its system requirements.
- B. There are 7 priority queues by default and this number cannot be changed.
- **C. There are 8 priority queues by default, and up to 8 additional queues can be manually configured**
- D. There are 8 priority queues and this number cannot be changed.

Answer: C

Explanation:

There are 8 priority queues by default, and up to 8 additional queues can be manually configured¹. Priority Queues are a feature of SecureXL that accelerates the performance of the Security Gateway by offloading CPU-intensive operations to the SecureXL device². Priority Queues are used to prioritize traffic when the Security Gateway is stressed and needs to drop packets². By default, there are 8 priority queues, each with a different priority level and type of connections². You can manually configure up to 8 additional queues by setting the relevant kernel parameters in \$FWDIR/boot/modules/fwkern.conf file¹. You can also customize the queue length, the load balancing method, and the services that are considered as control connections¹.

NEW QUESTION # 464

Due to high CPU workload on the Security Gateway, the security administrator decided to purchase a new CPU to replace the existing single core CPU. After installation, is the administrator required to perform any additional tasks?

- A. Administrator does not need to perform any task. Check Point will make use of the newly installed CPU and Cores
- B. Go to clash-Run cpconfig | Configure CoreXL to make use of the additional Cores | Exit cpconfig | Reboot Security Gateway
- C. Go to clash-Run cpconfig | Configure CoreXL to make use of the additional Cores | Exit cpconfig | Reboot Security Gateway | Install Security Policy
- D. Go to clash-Run cpstop | Run cpstart

Answer: B

NEW QUESTION # 465
