The Ultimate Guide to Passing Fortinet EMEA-Advanced-Support Exam

For candidates who are looking for the EMEA-Advanced-Support training materials, we will be your best choose due to the

following reason. EMEA-Advanced-Support training materials are high-quality and high accuracy, since we are strict with the quality and the answers. We ensure you that EMEA-Advanced-Support Exam Dumps are available, and the effectiveness can be also guarantees. We are pass guarantee and money back guarantee if you fail to pass the exam after buying EMEA-Advanced-Support trainin materials from us. Free update for one year is available to you.

Fortinet EMEA Advanced Support Exam Sample Questions (Q21-Q26):

NEW QUESTION # 21

Which FortiGate feature supports load balancing across multiple WAN links?

- **A. SD-WAN**
- B. Virtual Routing
- C. Multi-Path Routing
- D. Link Aggregation

Answer: A

Explanation:

FortiGate's SD-WAN feature enables load balancing and intelligent traffic steering across multiple WAN links based on criteria like bandwidth, latency, or application. Link Aggregation (B) bonds interfaces, Virtual Routing (C) is VRF, and Multi-Path Routing (D) is not a standard term. Exact extract: "SD-WAN enables load balancing and traffic steering across multiple WAN links, optimizing performance and reliability based on configured rules and metrics."

NEW QUESTION # 22

Which statement is true about IPsec VPNs and SSL VPNs?

- A. Either a SSL VPN or an IPsec VPN can be established between an end-user workstation and a FortiGate device
- **B. All of the above**
- C. SSL VPN creates a HTTPS connection. IPsec does not
- D. Both SSL VPNs and IPsec VPNs are standard protocols

Answer: B

Explanation:

Both SSL VPN and IPsec VPN are standard protocols supported by FortiGate devices for secure remote access. SSL VPN typically uses HTTPS (TCP port 443) for encrypted communication, while IPsec uses protocols like IKE and ESP. Both can be configured between an end-user workstation (e.g., via FortiClient) and a FortiGate device, supporting various authentication methods. All options are correct, making D the correct answer. Exact extract: "SSL VPN technology uses the standard SSL/TLS protocol to provide a secure connection to the FortiGate unit. The FortiGate SSL VPN can be configured to use HTTPS..." and "IPsec VPNs use standardized protocols like IKE and ESP to create secure tunnels... FortiClient supports both IPsec and SSL VPN connections to FortiGate devices for remote access."

NEW QUESTION # 23

What does the FortiGate 'set nat enable' command do in a firewall policy?

- A. Disables NAT for the policy
- B. Forces NAT to use a specific IP pool
- **C. Enables NAT for outgoing traffic**
- D. Enables NAT for incoming traffic only

Answer: C

Explanation:

The 'set nat enable' command in a FortiGate firewall policy enables Source NAT (SNAT) for outgoing traffic, typically rewriting the source IP to the FortiGate's interface IP or an IP pool. It does not disable NAT (B), force a specific pool (C), or limit to incoming traffic (D). Exact extract: "The 'set nat enable' command in a firewall policy enables Source NAT, rewriting the source IP address of outgoing traffic to the egress interface IP or a configured NAT pool."

NEW QUESTION # 24

What are the advantages of using a hub-and-spoke IPsec VPN configuration instead of a fully-meshed set of IPsec tunnels? (Select all that apply below)

- A. The routing table management is simpler because of fewer routes compared to a fully meshed node.
- B. Using a hub and spoke topology simplifies configuration because fewer tunnels are required.
- C. Using a hub and spoke topology is required to achieve full redundancy.
- D. Using a hub and spoke topology provides stronger encryption.

Answer: A,B

Explanation:

Hub-and-spoke IPsec VPN reduces the number of tunnels needed (one per spoke to hub instead of $n(n-1)/2$ in full mesh), simplifying configuration and routing tables with summarized routes at the hub. It does not inherently provide stronger encryption or require for redundancy (though can be made redundant). Exact extract: I want to have a way to quickly (preferably automated) setup VPN's to my 2 hubs from each spoke.

However we do not want/need VPNs between spokes. Hub Configuration: Configure the FortiGate unit as the hub. Set up IPsec VPN tunnels for each spoke. Use preshared keys for authentication. The purpose of this document is to describe the requirements and general information for building a Hub & Spoke architecture using FortiGate-VM on Oracle Cloud ... The remote sites do not need to have connectivity to each other nor does the customer want them to have connectivity to each other. Given these ... This article gives a brief configuration example from one spoke to other spoke using IPsec, through the Hub firewall.

NEW QUESTION # 25

Which of the following is a benefit of using FortiGate's Security Fabric?

- A. It enables centralized management of multiple Fortinet devices
- B. It increases the speed of IPsec VPN tunnels
- C. It reduces the need for firewall policies
- D. It automatically configures VLANs on FortiSwitches

Answer: A

Explanation:

The Fortinet Security Fabric provides a centralized management platform for multiple Fortinet devices (e.g., FortiGate, FortiSwitch, FortiAP), enabling coordinated security policies, telemetry sharing, and simplified administration. It does not directly speed up VPNs (B), reduce firewall policies (C), or auto-configure VLANs (D). Exact extract: "The Fortinet Security Fabric enables centralized management and visibility across Fortinet devices, allowing coordinated security policies and telemetry sharing for enhanced protection."

NEW QUESTION # 26
