After successful competition of the FCP_FGT_AD-7.4 certification, the certified candidates can put their career on the right track and achieve their professional career objectives in a short time period. However, to pass the FCP_FGT_AD-7.4 Exam you have to prepare well. For the quick FCP_FGT_AD-7.4 exam preparation the FCP_FGT_AD-7.4 Questions are the right choice.

Fortinet FCP - FortiGate 7.4 Administrator Sample Questions (Q38-Q43):

NEW QUESTION # 38

Refer to the exhibit.

ID	Name	Source	Destination	Schedule	Service	Action	NAT	Type	Security Profiles
1	Full_Access	Remote-users	all	always	HTTP HTTPS ALL_ICMP	ACCEPT	NAT	Standard	WEB Category_Monitor SSL certificate-inspection

FortiGate is configured for firewall authentication. When attempting to access an external website, the user is not presented with a login prompt.

What is the most likely reason for this situation?

- A. The Service DNS is required in the firewall policy.
- B. No matching user account exists for this user.
- C. The user is using an incorrect user name.
- D. The Remote-users group is not added to the Destination.

Answer: A

Explanation:

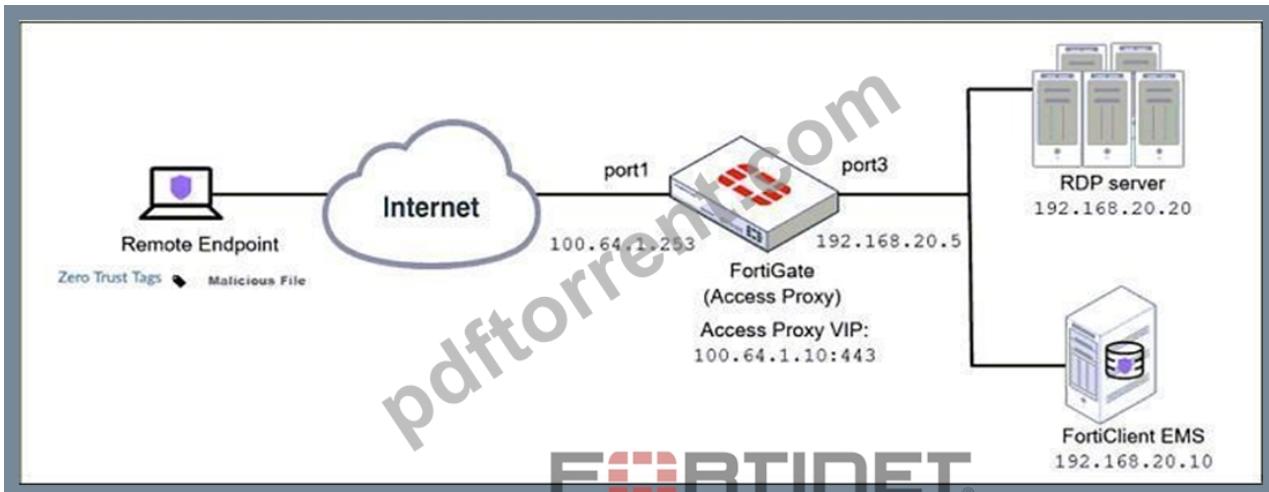

Firewall authentication generally requires the DNS service to be enabled in the firewall policy to correctly resolve hostnames during the authentication process. If DNS is not allowed in the firewall policy, the FortiGate cannot resolve external domains, and as a result, the user may not be presented with the login prompt when attempting to access an external website.

NEW QUESTION # 39

Refer to the exhibit.

Based on the ZTNA tag, the security posture of the remote endpoint has changed.

What will happen to endpoint active ZTNA sessions?

- A. They will be re-evaluated to match the endpoint policy.
- B. They will be re-evaluated to match the security policy.
- C. They will be re-evaluated to match the firewall policy.
- D. They will be re-evaluated to match the ZTNA policy.

Answer: D

Explanation:

C: They will be re-evaluated to match the ZTNA policy.

Endpoint posture changes trigger active ZTNA proxy sessions to be re-verified and terminated if the endpoint is no longer compliant with the ZTNA policy.

NEW QUESTION # 40

Refer to the exhibits.

Application sensor configuration

Edit Application Sensor

2	Apple	Filter	Monitor

Application and Filter override configuration

The exhibits show the application sensor configuration and the Excessive-Bandwidth and Apple filter details. Based on the configuration, what will happen to Apple FaceTime if there are only a few calls originating or incoming?

- A. Apple FaceTime will be allowed, based on the Video/Audio category configuration.
- B. Apple FaceTime will be blocked, based on the Excessive-Bandwidth filter configuration.**
- C. Apple FaceTime will be allowed, based on the Apple filter configuration.
- D. Apple FaceTime will be allowed only if the Apple filter in Application and Filter Overrides is set to Allow.

Answer: B

Explanation:

Based on the application sensor configuration and the filter details:

* D. Apple FaceTime will be blocked, based on the Excessive-Bandwidth filter configuration: The "Excessive-Bandwidth" filter is set to block, which includes "FaceTime" under its application signature.

As a result, FaceTime will be blocked regardless of the "Apple" filter configuration because the "Excessive-Bandwidth" filter takes precedence due to its block action setting.

The other options are not correct:

- * A. Apple FaceTime will be allowed, based on the Video/Audio category configuration: The Video/Audio category is not relevant because FaceTime is specifically included in the Excessive-Bandwidth filter, which blocks it.
- * B. Apple FaceTime will be allowed, based on the Apple filter configuration: Although the Apple filter is set to monitor, the block action of the Excessive-Bandwidth filter will override this.

* C. Apple FaceTime will be allowed only if the Apple filter in Application and Filter Overrides is set to Allow: The allow setting for the Apple filter is irrelevant in this context, as the block action in the Excessive-Bandwidth filter will prevail.

NEW QUESTION # 41

The HTTP inspection process in web filtering follows a specific order when multiple features are enabled in the web filter profile. Which order must FortiGate use when the web filter profile has features such as safe search enabled?

- A. Static domain filter, SSL inspection filter, and external connectors filters
- B. DNS-based web filter and proxy-based web filter
- C. **Static URL filter, FortiGuard categoryfilter, and advanced filters**
- D. FortiGuard category filter and ratingfilter

Answer: C

NEW QUESTION # 42

Which downstream FortiGate VDOM is used to join the Security Fabric when split-task VDOM is enabled on all FortiGate devices?

- A. **Root VDOM**
- B. Customer VDOM
- C. FG-traffic VDOM
- D. Global VDOM

Answer: A

Explanation:

If you enable split-task VDOM mode on the upstream FGT device, it can allow downstream FGT devices to join the Security Fabric in the root and FG-Traffic VDOMs. If split-task VDOM mode is enabled on the downstream FortiGate, it can only connect to the upstream FortiGate through the downstream FortiGate interface on the root VDOM.

NEW QUESTION # 43

.....

We all harness talents with processional skills. Mastering the certificate of the FCP_FGT_AD-7.4 practice exam is essential for you. With all instability of the society, those knowledge and profession certificate mean a lot for you. So it is unquestionable the FCP_FGT_AD-7.4 learning questions of ours can do a big favor. And we have become the most popular exam braindumps provider in this career and supported by numerous of our loyal customers. You will be satisfied with our FCP_FGT_AD-7.4 study guide as well.
