

Pass Guaranteed Quiz Google - Professional-Cloud-Architect - Google Certified Professional - Cloud Architect (GCP)–The Best New Real Exam

P.S. Free 2025 Google Professional-Cloud-Architect dumps are available on Google Drive shared by Free4Dump:
<https://drive.google.com/open?id=1mLbz3mYK--R-chKd-SbCAOMZdhG5yzC>

Free4Dump provides actual to help candidates pass on the first try, ultimately saving them time and resources. These questions are of the highest quality, ensuring success for those who use them. To achieve success, it's crucial to have access to quality Google Professional-Cloud-Architect Exam Dumps and to prepare for the likely questions that will appear on the exam. Free4Dump helps candidates overcome any difficulties they may face in exam preparation, with a 24/7 support team ready to assist with any issues that may arise.

Prerequisites

The recommended industry experience for the potential candidates is at least three years and an additional one year of experience in designing and managing solutions with the use of GCP. You must also understand the content of the corresponding exam before sitting for it. It is also recommended that you have expertise in software development methodologies as well as different approaches such as multi-tiered distributed applications for hybrid and multi-Cloud environments.

Designing for Compliance and Security

- Design for compliance: this covers one's knowledge of legislation (health record privacy, data privacy, ownership, and children's privacy); commercial (sensitive data handling and personally identifiable information); industry certifications (SOC 2); audits (such as logs).
- Design for security: the learners need to gain knowledge of penetration testing; identity and access management; resource hierarchy; separation of duties; security control; data security; customer-managed encryption key management with Cloud KMS;

Free Professional-Cloud-Architect Exam Dumps | Professional-Cloud-Architect New Braindumps Pdf

With Professional-Cloud-Architect study tool, you are not like the students who use other materials. As long as the syllabus has changed, they need to repurchase learning materials. This not only wastes a lot of money, but also wastes a lot of time. Our industry experts are constantly adding new content to Professional-Cloud-Architect Exam Torrent based on constantly changing syllabus and industry development breakthroughs. We also hire dedicated staff to continuously update our question bank daily, so no matter when you buy Professional-Cloud-Architect guide torrent, what you learn is the most advanced.

Google Professional-Cloud-Architect Certification Exam is designed for professionals who want to validate their skills and knowledge in designing and managing solutions on the Google Cloud Platform (GCP). Google Certified Professional - Cloud Architect (GCP) certification is ideal for architects, engineers, and developers who want to demonstrate their expertise in designing and deploying scalable, reliable, and secure cloud solutions. Google Certified Professional - Cloud Architect (GCP) certification exam covers a broad range of topics, including cloud architecture, infrastructure, data management, security, and compliance.

Google Certified Professional - Cloud Architect (GCP) Sample Questions (Q81-Q86):

NEW QUESTION # 81

Your architecture calls for the centralized collection of all admin activity and VM system logs within your project. How should you collect these logs from both VMs and services?

- A. All admin and VM system logs are automatically collected by Stackdriver.
- B. Launch a custom syslogd compute instance and configure your GCP project and VMs to forward all logs to it.
- C. Install the Stackdriver Logging agent on a single compute instance and let it collect all audit and access logs for your environment.
- **D. Stackdriver automatically collects admin activity logs for most services. The Stackdriver Logging agent must be installed on each instance to collect system logs.**

Answer: D

Explanation:

<https://cloud.google.com/logging/docs/agent/>

NEW QUESTION # 82

Which of TerramEarth's legacy enterprise processes will experience significant change as a result of increased Google Cloud Platform adoption?

- A. Opex/capex allocation, LAN changes, capacity planning
- B. Data Center expansion, TCO calculations, utilization measurement
- C. Capacity planning, utilization measurement, data center expansion
- **D. Capacity planning, TCO calculations, opex/capex allocation**

Answer: D

NEW QUESTION # 83

TerramEarth has equipped all connected trucks with servers and sensors to collect telemetry data. Next year they want to use the

data to train machine learning models. They want to store this data in the cloud while reducing costs. What should they do?

- A. Push the telemetry data in real-time to a streaming dataflow job that compresses the data, and store it in Cloud Bigtable
- B. Push the telemetry data in real-time to a streaming dataflow job that compresses the data, and store it in Google BigQuery
- **C. Have the vehicle's computer compress the data in hourly snapshots, and store it in a GCS Coldline bucket**
- D. Have the vehicle's computer compress the data in hourly snapshots, and store it in a Google Cloud Storage (GCS) Nearline bucket

Answer: C

Explanation:

Storage is the best choice for data that you plan to access at most once a year, due to its slightly lower availability, 90-day minimum storage duration, costs for data access, and higher per-operation costs. For example:

Cold Data Storage - Infrequently accessed data, such as data stored for legal or regulatory reasons, can be stored at low cost as Coldline Storage, and be available when you need it.

Disaster recovery - In the event of a disaster recovery event, recovery time is key. Cloud Storage provides low latency access to data stored as Coldline Storage.

NEW QUESTION # 84

Mountkirk Games wants to set up a real-time analytics platform for their new game. The new platform must meet their technical requirements.

Which combination of Google technologies will meet all of their requirements?

- **A. Cloud Dataflow, Cloud Storage, Cloud Pub/Sub, and BigQuery**
- B. Cloud Dataproc, Cloud Pub/Sub, Cloud SQL, and Cloud Dataflow
- C. Kubernetes Engine, Cloud Pub/Sub, and Cloud SQL
- D. Cloud Pub/Sub, Compute Engine, Cloud Storage, and Cloud Dataproc
- E. Cloud SQL, Cloud Storage, Cloud Pub/Sub, and Cloud Dataflow

Answer: A

Explanation:

Ingest millions of streaming events per second from anywhere in the world with Cloud Pub/Sub, powered by Google's unique, high-speed private network. Process the streams with Cloud Dataflow to ensure reliable, exactly-once, low-latency data transformation. Stream the transformed data into BigQuery, the cloud-native data warehousing service, for immediate analysis via SQL or popular visualization tools.

From scenario: They plan to deploy the game's backend on Google Compute Engine so they can capture streaming metrics, run intensive analytics.

Requirements for Game Analytics Platform

1. Dynamically scale up or down based on game activity
2. Process incoming data on the fly directly from the game servers
3. Process data that arrives late because of slow mobile networks
4. Allow SQL queries to access at least 10 TB of historical data
5. Process files that are regularly uploaded by users' mobile devices
6. Use only fully managed services

Reference: <https://cloud.google.com/solutions/big-data/stream-analytics/> Mountkirk Games, B Testlet 1 Company Overview

Mountkirk Games makes online, session-based, multiplayer games for mobile platforms. They build all of their games using some server-side integration. Historically, they have used cloud providers to lease physical servers.

Due to the unexpected popularity of some of their games, they have had problems scaling their global audience, application servers, MySQL databases, and analytics tools.

Their current model is to write game statistics to files and send them through an ETL tool that loads them into a centralized MySQL database for reporting.

Solution Concept

Mountkirk Games is building a new game, which they expect to be very popular. They plan to deploy the game's backend on Google Compute Engine so they can capture streaming metrics, run intensive analytics, and take advantage of its autoscaling server environment and integrate with a managed NoSQL database.

Business Requirements

* Increase to a global footprint

- * Improve uptime - downtime is loss of players
- * Increase efficiency of the cloud resources we use
- * Reduce latency to all customers

Technical Requirements

Requirements for Game Backend Platform

- * Dynamically scale up or down based on game activity
- * Connect to a transactional database service to manage user profiles and game state
- * Store game activity in a timeseries database service for future analysis
- * As the system scales, ensure that data is not lost due to processing backlogs
- * Run hardened Linux distro

Requirements for Game Analytics Platform

- * Dynamically scale up or down based on game activity
- * Process incoming data on the fly directly from the game servers
- * Process data that arrives late because of slow mobile networks
- * Allow queries to access at least 10 TB of historical data
- * Process files that are regularly uploaded by users' mobile devices

Executive Statement

Our last successful game did not scale well with our previous cloud provider, resulting in lower user adoption and affecting the game's reputation. Our investors want more key performance indicators (KPIs) to evaluate the speed and stability of the game, as well as other metrics that provide deeper insight into usage patterns so we can adapt the game to target users. Additionally, our current technology stack cannot provide the scale we need, so we want to replace MySQL and move to an environment that provides autoscaling, low latency load balancing, and frees us up from managing physical servers.

NEW QUESTION # 85

For this question, refer to the Dress4Win case study. To be legally compliant during an audit, Dress4Win must be able to give insights in all administrative actions that modify the configuration or metadata of resources on Google Cloud.

What should you do?

- A. Use Stackdriver Monitoring to create a dashboard on the project's activity.
- **B. Use Stackdriver Trace to create a trace list analysis.**
- C. Enable Cloud Identity-Aware Proxy in all projects, and add the group of Administrators as a member.
- D. Use the Activity page in the GCP Console and Stackdriver Logging to provide the required insight.

Answer: B

Explanation:

<https://cloud.google.com/logging/docs/audit/>
