Nowadays, the certification has been one of the criteria for many companies to recruit employees. And in order to obtain the C-ABAPD-2507 certification, taking the C-ABAPD-2507 exam becomes essential. Although everyone hopes to pass the exam, the difficulties in preparing for it should not be overlooked. There are plenty of people who took a lot of energy and time but finally failed to pass. You really need our C-ABAPD-2507 practice materials which can work as the pass guarantee.

SAP C-ABAPD-2507 Exam Syllabus Topics:

Topic	Details
Topic 1	ABAP RESTful Application Programming Model: This section of the exam measures skills of SAP Application Programmers and covers the fundamentals of the ABAP RESTful Application Programming Model (RAP). It includes topics such as behavior definitions, service binding, and the use of managed and unmanaged scenarios. The focus is on building modern, scalable, and cloud-ready applications using RAP.
Topic 2	Core ABAP Programming: This section of the exam measures skills of SAP Application Programmers and covers foundational ABAP programming knowledge. Topics include modularization techniques, internal tables, control structures, and classical report programming. Mastery of these concepts is essential for building efficient ABAP applications.
Topic 3	ABAP SQL and Code Pushdown: This section of the exam measures skills of SAP ABAP Developers and covers the use of advanced SQL techniques within ABAP. It includes code pushdown strategies that leverage database-level processing to enhance application performance. Key areas include Open SQL enhancements and integrating logic closer to the database.

Topic 4	• SAP Clean Core Extensibility and ABAP Cloud: This section of the exam measures skills of SAP Application Programmers and covers the clean core principles and extensibility options within SAP BTP. It also includes cloud-native ABAP development practices, emphasizing the creation of upgrade-stable and maintainable extensions aligned with SAP's cloud strategy.

Real C-ABAPD-2507 Questions & C-ABAPD-2507 New Real Exam

The key trait of our product is that we keep pace with the changes of syllabus and the latest circumstance to revise and update our C-ABAPD-2507 study materials, and we are available for one-year free updating to assure you of the reliability of our service. Our company has established a long-term partnership with those who have purchased our C-ABAPD-2507 exam guides. We have made all efforts to update our product in order to help you deal with any change, making you confidently take part in the exam. We will inform you that the C-ABAPD-2507 Study Materials should be updated and send you the latest version in a year after your payment. We will also provide some discount for your updating after a year if you are satisfied with our C-ABAPD-2507 exam prepare.

SAP Certified Associate - Back-End Developer - ABAP Cloud Sample Questions (Q74-Q79):

NEW QUESTION # 74

For what kind of applications would you consider using on-stack developer extensions? Note: There are 2 correct answers to this question.

- A. Applications that integrate data from several different systems
- B. Applications that provide APIs for side by side SAP BTP apps
- C. Applications that run separate from SAP S/4HANA
- D. Applications that access SAP S/4HANA data using complex SQL

Answer: B,D

Explanation:

On-stack developer extensibility is a type of extensibility that allows you to create development projects directly on the SAP S/4HANA Cloud technology stack. It gives you the opportunity to develop cloud-ready and upgrade-stable custom ABAP applications and services inside the SAP S/4HANA Cloud, public edition system. You can use the ABAP Development Tools in Eclipse to create and deploy your on-stack extensions. On-stack developer extensibility is suitable for the following kinds of applications:

Applications that provide APIs for side by side SAP BTP apps. On-stack developer extensibility allows you to create OData services or RESTful APIs based on CDS view entities or projection views. These services or APIs can expose SAP S/4HANA data and logic to other applications that run on the SAP Business Technology Platform (SAP BTP) or other platforms. This way, you can create a loosely coupled integration between your SAP S/4HANA system and your side by side SAP BTP apps.

Applications that access SAP S/4HANA data using complex SQL. On-stack developer extensibility allows you to use ABAP SQL to access SAP S/4HANA data using complex queries, such as joins, aggregations, filters, parameters, and code pushdown techniques. You can also use ABAP SQL to perform data manipulation operations, such as insert, update, delete, and upsert. This way, you can create applications that require advanced data processing and analysis on SAP S/4HANA data.

The other kinds of applications are not suitable for on-stack developer extensibility, as they have different requirements and challenges. These kinds of applications are:

Applications that integrate data from several different systems. On-stack developer extensibility is not meant for creating applications that integrate data from multiple sources, such as other SAP systems, third-party systems, or cloud services. This is because on-stack developer extensibility does not support remote access or data replication, and it may cause performance or security issues. For this kind of applications, you should use side by side extensibility, which allows you to create applications that run on the SAP BTP and communicate with the SAP S/4HANA system via public APIs or events.

Applications that run separate from SAP S/4HANA. On-stack developer extensibility is not meant for creating applications that run independently from the SAP S/4HANA system, such as standalone apps, microservices, or web apps. This is because on-stack developer extensibility requires a tight coupling with the SAP S/4HANA system, and it may limit the scalability, flexibility, and portability of the applications. For this kind of applications, you should use side by side extensibility, which allows you to create applications that run on the SAP BTP and leverage the cloud-native features and services of the platform.

NEW QUESTION # 75

What are valid statements? Note: There are 3 correct answers to this question.

Object-oriented design

3 of 80

Given this code,

```
INTERFACE if1.  
    METHODS m1.  
ENDINTERFACE.
```

```
CLASS cl1 DEFINITION.  
PUBLIC SECTION.  
    INTERFACES if1.  
    METHODS m2.  
ENDCLASS.
```

```
...  
* in a method of another class  
DATA go_if1 TYPE REF TO if1.  
DATA go_cl1 TYPE REF to cl1.  
go_cl1 = NEW #( ... ).  
go_if1 = go_cl1.
```

what are valid statements?

Note: There are 3 correct answers to this question.

- ☐ Instead of `go_cl1 = NEW #( ... )` you could use `go_if1 = NEW cl1( ... )`.
- ☐ `go_if1` may call method `m1` with `go_if1->m1( ... )`.

```
CLASS cl1 DEFINITION.  
PUBLIC SECTION.  
    INTERFACES if1.  
    METHODS m2.  
ENDCLASS.
```

```
...  
* in a method of another class  
DATA go_if1 TYPE REF TO if1.  
DATA go_cl1 TYPE REF to cl1.  
go_cl1 = NEW #( ... ).  
go_if1 = go_cl1.
```

what are valid statements?

Note: There are 3 correct answers to this question.

- ☐ Instead of `go_cl1 = NEW #( ... )` you could use `go_if1 = NEW cl1( ... )`.
- ☐ `go_if1` may call method `m1` with `go_if1->m1( ... )`.

- ☐ go_cl1 may call method m1 with go_cl1->if1~m1(...).
- ☐ Instead of go_cl1 = NEW #(...) you could use go_if1 = NEW #(...).
- ☐ go_if1 may call method m2 with go_if->m2(...).

Valid Statements (3 correct answers):

- ✓ **1. Instead of go_cl1 = NEW #(...) you could use go_if1 = NEW cl1(...).**

This is valid because cl1 implements if1. You can directly instantiate cl1 into a reference typed as if1.

- ✓ **2. go_if1 may call method m1 with go_if1->m1(...).**

This is valid because m1 is defined in interface if1, and go_if1 is typed as reference to if1.

- ✓ **3. go_cl1 may call method m1 with go_cl1->if1~m1(...).**

This is also valid. go_cl1 is typed as cl1, which implements if1, and method m1 can be explicitly accessed via interface reference.

Incorrect Options:

- ✗ **go_if1 may call method m2 with go_if1->m2(...)**

Invalid. m2 is not part of if1, and go_if1 is only typed as if1.

- ✗ **go_cl1 may call method m1 directly without interface notation**

Depends on implementation. If m1 is not redefined in public section directly, you must use interface access: go_cl1->if1~m1().

- A. go_cl1 may call method m1 with go_cl1->if1~m1(...).
- B. go_if1 may call method m2 with go_if1->m2(...)
- C. go_cl1 may call method m1 directly without interface notation
- D. go_if1 may call method m1 with go_if1->m1(...).
- E. Instead of go_cl1 = NEW #(...) you could use go_if1 = NEW cl1(...).

Answer: A,D,E

NEW QUESTION # 76

What RESTful Application Programming object contains only the fields required for a particular app?

- A. Projection View
- B. Data model view
- C. Database view
- D. Metadata extension

Answer: A

Explanation:

A projection view is a RESTful Application Programming object that contains only the fields required for a particular app. A projection view is a CDS view entity that defines a projection on an existing CDS view entity or CDS DDIC-based view. A projection view exposes a subset of the elements of the projected entity, which are relevant for a specific business service. A projection view can also define aliases, virtual elements, and annotations for the projected elements. A projection view is the top-most layer of a CDS data model and prepares data for a particular use case. A projection view can have different provider contracts depending on the type of service it supports, such as transactional query, analytical query, or transactional interface.

A database view is a CDS DDIC-based view that defines a join or union of database tables. A database view has an SQL view attached and can be accessed by Open SQL or native SQL. A database view can be used as a projected entity for a projection view, but it does not contain only the fields required for a particular app.

A metadata extension is a RESTful Application Programming object that defines additional annotations for a CDS view entity or a

projection view. A metadata extension can be used to enhance the metadata of a CDS data model without changing the original definition. A metadata extension does not contain any fields, but only annotations.

A data model view is a CDS view entity that defines a data model based on database tables or other CDS view entities. A data model view can have associations, aggregations, filters, parameters, and annotations. A data model view can be used as a projected entity for a projection view, but it does not contain only the fields required for a particular app.

NEW QUESTION # 77

Which statement creates a reference variable for class CL_VEHICLE?

- A. DATA lo_vehicle LIKE REF cl_vehicle.
- **B. DATA lo_vehicle TYPE REF TO cl_vehicle.**
- C. TYPES lo_vehicle TYPE cl_vehicle.
- D. DATA lo_vehicle TYPE REF OF cl_vehicle.

Answer: B

Explanation:

Comprehensive and Detailed Explanation from Exact Extract:

* In ABAP, object references must be declared with TYPE REF TO <class>.

* Option D is correct: DATA lo_vehicle TYPE REF TO cl_vehicle. creates a reference variable.

* Option A # Incorrect, TYPES defines a type, not a variable.

* Option B # Syntax error, correct keyword is REF TO, not REF OF.

* Option C # Invalid, LIKE REF is not supported in ABAP.

Study Guide Reference: ABAP Objects Programming Guide - Reference Variable Declarations.

NEW QUESTION # 78

Which of the following models must you use to develop artifacts that expose ABAP-based backend services based on semantic data models? Note: There are 2 correct answers to this question.

- A. ABAP Cloud Development Model
- **B. ABAP Programming Model for SAP Fiori**
- **C. ABAP RESTful application programming model**
- D. Cloud Application Programming Model

Answer: B,C

NEW QUESTION # 79

.....

We assure you that we are focused on providing you with guidance about our C-ABAPD-2507 exam question, but all services are free. If you encounter installation problems, we will have professionals to provide you with remote assistance. Of course, we will humbly accept your opinions on our C-ABAPD-2507 Quiz guide. If you have good suggestions to make better use of our C-ABAPD-2507 test prep, we will accept your proposal and make improvements. Each of your progress is our driving force. We sincerely serve for you any time.
