NEW QUESTION # 216

Which of the following roles, according to the shared responsibility model, is responsible for securing the company's database in an IaaS model for a cloud environment?

- A. Cloud provider
- **B. Client**
- C. Third-party vendor
- D. DBA

Answer: B

Explanation:

Explanation

According to the shared responsibility model, the client and the cloud provider have different roles and responsibilities for securing the cloud environment, depending on the service model. In an IaaS (Infrastructure as a Service) model, the cloud provider is responsible for securing the physical infrastructure, such as the servers, storage, and network devices, while the client is responsible for securing the operating systems, applications, and data that run on the cloud infrastructure. Therefore, the client is responsible for securing the company's database in an IaaS model for a cloud environment, as the database is an application that stores data. The client can use various security controls, such as encryption, access control, backup, and auditing, to protect the database from unauthorized access, modification, or loss. The third-party vendor and the DBA (Database Administrator) are not roles defined by the shared responsibility model, but they may be involved in the implementation or management of the database security. NEW QUESTION # 217

Which of the following steps in the risk management process involves establishing the scope and potential risks involved with a project?

- **A. Risk identification**
- B. Risk monitoring and review
- C. Risk treatment

- D. Risk mitigation

Answer: A

Explanation:

Risk identification is the first step in the risk management process, where potential threats and vulnerabilities are analyzed to understand their impact on an organization. This includes identifying assets, evaluating threats, and assessing potential vulnerabilities.

- * Risk mitigation: Reducing risk by implementing controls.
- * Risk treatment: Determining how to handle identified risks.
- * Risk monitoring and review: Ongoing evaluation of risk controls.

NEW QUESTION # 218

Which of the following is used to improve security and overall functionality without losing critical application data?

- A. Encryption
- **B. Patching**
- C. Decommissioning
- D. Reformatting

Answer: B
