ASIS Physical Security Professional Exam Sample Questions (Q67-Q72):

NEW QUESTION # 67

What have been secured to some extent by limiting access to underground areas?

- A. Terminals
- B. Maritime operations
- C. Security measures
- D. Resealing

Answer: A

NEW QUESTION # 68

A project specification includes, but is not limited to, system requirements that identify:

- A. Equipment tolerances
- B. Performance expectations
- C. The cost of the installed system
- D. Testing specifications

Answer: B

Explanation:

Project specifications define system requirements, including performance expectations such as detection accuracy, response times, image quality, or access control capabilities. These expectations guide vendors in delivering compliant solutions and help measure system acceptance upon completion.

A (Cost) is part of project budgeting, not specifications.

B and C (Testing and tolerances) may be included but are not the core element.

NEW QUESTION # 69

The system which provides an extra measure of security by requiring that exchanges take place at the entrance to each restricted area within the controlled area is called:

- A. Pass-exchange system
- B. Contractive pass system
- C. Single pass system
- D. Multiple-pass system

Answer: D

NEW QUESTION # 70

What generally means removing the risk to the company by paying for the protection of an insurance policy?

- A. Self-assurance
- B. Collateral
- C. Security
- D. Risk transfer

Answer: D

Explanation:

Risk transfer refers to shifting the financial burden of potential losses from an organization to a third party, typically through insurance. By paying a premium, the company secures coverage that will compensate for specific losses, thereby reducing its own financial exposure.

NEW QUESTION # 71

When conducting a risk analysis, the BEST way to state the impact of an adverse event or circumstance is to express it as:

- A. Cost-benefit ratio
- B. Monetary value
- C. Downtime estimate
- D. Frequency-of-occurrence graph

Answer: B

Explanation:

The best way to express the impact of a risk in business terms is through monetary value. This allows decision-makers to understand the financial consequences of threats and justify investments in controls or mitigation strategies. Assigning a dollar value helps in prioritizing risks and performing cost-benefit analyses.

B (Cost-benefit ratio) is used in analysis, not direct impact expression.

C (Downtime estimate) is useful, but only a part of financial impact.

D (Frequency graph) represents likelihood, not impact.
