

Pass Guaranteed Quiz HP - HPE0-J68 - Useful Reliable HPE Storage Solutions Braindumps Questions

BONUS!!! Download part of ValidVCE HPE0-J68 dumps for free: <https://drive.google.com/open?id=1DYF15-TV0yWGPfAgezm-2wW84TSYOOw>

Begin to learn the HPE0-J68 exam questions and memorize the knowledge given in them. Only ten days is enough to cover up the content and you will feel confident enough that you can answer all HPE0-J68 Questions on the syllabus of HPE0-J68 certificate. Such an easy and innovative study plan is amazingly beneficial for an ultimately brilliant success in exam.

Through years of efforts and constant improvement, our HPE0-J68 study materials stand out from numerous study materials and become the top brand in the domestic and international market. Our company controls all the links of HPE0-J68 study materials which include the research, innovation, survey, production, sales and after-sale service strictly and strives to make every link reach the acme of perfection. Our company pays close attentions to the latest tendency among the industry and the clients' feedback about our HPE0-J68 Study Materials.

100% Pass Quiz HPE0-J68 - HPE Storage Solutions Authoritative Reliable Braindumps Questions

Many candidates do not have actual combat experience, for the qualification examination is the first time to attend, so about how to get the test HPE0-J68 certification didn't own a set of methods, and cost a lot of time to do something that has no value. With our HPE0-J68 Exam Practice, you will feel much relax for the advantages of high-efficiency and accurate positioning on the content and formats according to the candidates' interests and hobbies. And you will be bound to pass the exam with our HPE0-J68 learning guide!

HPE Storage Solutions Sample Questions (Q187-Q192):

NEW QUESTION # 187

Your customer currently uses a VMware-based Veeam backup proxy. They would like to perform a direct backup from their FC-connected Alletra 9000 array. What could be the reason for the backup falling back to network mode?

- A. Direct backup from a FC-connected array is only available on physical server-based backup proxy
- B. VM-based backup proxy has not enough RAM and more must be assigned in VM properties
- C. Direct backup from an HPE Alletra 9000 array requires an Advanced Backup LTU
- D. HPE Alletra 9000 storage array WS API connection timeout value must be increased

Answer: A

Explanation:

If a customer is using a VMware-based Veeam backup proxy and attempts to perform a direct backup from their Fibre Channel (FC)-connected HPE Alletra 9000 array, but the backup falls back to network mode, the likely reason is that direct backup from an FC-connected array is only supported on a physical server-based backup proxy. VMware-based (virtual) proxies do not support direct FC connections, which is why the backup process defaults to network mode. To achieve direct backup via FC, the customer would need to configure a physical server as the backup proxy.

NEW QUESTION # 188

A customer needs a centralized solution for storing departmental data to be accessed by Windows-based laptops and other personal devices.

Which solution should you recommend?

- A. Block storage, directly accessed over SAS
- B. Block storage, directly accessed over FC
- C. Object storage, accessed over S3 connector
- **D. File-oriented storage, accessed over SMB**

Answer: D

Explanation:

For a customer needing a centralized storage solution accessible by Windows-based laptops and other personal devices, file-oriented storage accessed over SMB (Option D) is the most appropriate recommendation. SMB (Server Message Block) is a network file sharing protocol that allows files to be shared among devices running on a Windows network.

File-oriented storage solutions, like HPE's StoreEasy or Nimble with file services, are designed to serve files over the network using SMB, providing easy and secure access to departmental data.

NEW QUESTION # 189

You are presenting the HPE StoreEver portfolio to a media agency.

What advantage is offered when using LTFS?

- **A. file management capabilities will be provided with tape cartridges**
- B. WORM functionality for file, block and object storage access on tape
- C. file encryption with public and private key management
- D. file and block data management within an HPE HSM solution

Answer: A

Explanation:

The Linear Tape File System (LTFS) provides an easy and intuitive way to manage files stored on tape cartridges. LTFS allows users to organize, browse, and access files directly from the tape as if they were on a disk. This file system presents tape as a drive letter on Windows or as a mount point on Linux, making it simpler to use tape for data archiving and management. This capability makes LTFS an attractive option for organizations that require long-term data storage with easy access.

NEW QUESTION # 190

A customer is a cloud service provider with infrastructure powered by HPE 3PAR StoreServ 9000. The customer is concerned about their ability to ensure the quality of service and protect their tenants from unpredictable bursts of I/O from other tenants. What should you recommend to your customer?

- A. Use adaptive optimization to optimize service level automatically
- B. Use virtual domain to automatically set multi-tenant policies
- C. Use dynamic optimization to automatically manage quality of service

- **D. Use priority optimization to enable service level for workloads**

Answer: D

Explanation:

For a cloud service provider using HPE 3PAR StoreServ 9000, Priority Optimization is the recommended solution to ensure the quality of service (QoS) and protect tenants from unpredictable bursts of I/O from other tenants. Priority Optimization allows administrators to set service levels for different workloads, ensuring that critical workloads receive the necessary resources while maintaining overall system performance. This feature helps manage and enforce QoS in a multi-tenant environment, providing predictable performance and preventing noisy neighbors from impacting other tenants.

NEW QUESTION # 191

How does HPE GreenLake for Block Storage perform write operations caching?

- A. Data goes directly to space based on NVMe
- B. Data is stored in supercapacitor-protected RAM
- **C. Data is cached on DFC-hosted SSDs**
- D. Data is buffered in NVDIMM

Answer: C

Explanation:

HPE GreenLake for Block Storage performs write operations caching by caching the data on DFC-hosted SSDs. The Data Fabric Controller (DFC) manages the SSDs and is responsible for optimizing the performance of the storage system by caching write operations. This approach ensures that write-intensive workloads are handled efficiently, providing lower latency and higher throughput for applications that demand fast storage performance.

For further details, refer to:

NEW QUESTION # 192

.....

We can't forget the advantages and the conveniences that reliable HPE0-J68 study materials compiled by our companies bring to us. First, by telling our customers what the key points of learning, and which learning HPE0-J68 method is available, they may save our customers money and time. They guide our customers in finding suitable jobs and other information as well. Secondly, a wide range of practice types and different version of our HPE0-J68 Study Materials receive technological support through our expert team.
