Trustworthy Juniper JN0-105 Examcollection Vce With Interactive Test Engine & Newest JN0-105 Latest Braindumps Free

Our JN0-105 prep torrent boosts the highest standards of technical accuracy and only use certificated subject matter and experts. We provide the latest and accurate Junos, Associate (JNCIA-Junos) exam torrent to the client and the questions and the answers we provide are based on the real exam. But you buy our JN0-105 prep torrent you can mainly spend your time energy and time on your job, the learning or family lives and spare little time every day to learn our Junos, Associate (JNCIA-Junos) exam torrent. Our

answers and questions are compiled elaborately and easy to be mastered. Because our JN0-105 Test Braindumps are highly efficient and the passing rate is very high you can pass the exam fluently and easily with little time and energy needed.

Juniper JN0-105 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">• Junos OS Fundamentals: It covers concepts, benefits, and functionality of the core elements of the Junos OS.
Topic 2	<ul style="list-style-type: none">• Routing Fundamentals: This topic discusses pointing out basic routing concepts or functionality for Junos devices. Moreover, the topic also describes configuring or monitoring basic routing elements for a Junos device.
Topic 3	<ul style="list-style-type: none">• User Interfaces: This topic delves into identifying the concepts, operation, or functionality of the Junos user interface.
Topic 4	<ul style="list-style-type: none">• Configuration Basics: Identification of the main elements for configuring Junos devices is discussed in this topic. Moreover, it describes configuring basic components of a Junos device
Topic 5	<ul style="list-style-type: none">• Routing Policy and Firewall Filters: The topic of Routing Policy and Firewall Filters covers routing policy and firewall filters on Junos devices. Furthermore, the topic also deals with routing policies and firewall filters on a Junos device.

Juniper Junos, Associate (JNCIA-Junos) Sample Questions (Q34-Q39):

NEW QUESTION # 34

What is the protocol data unit (PDU) of the Data Link Layer?

- A. segment
- B. byte
- C. bit
- **D. frame**

Answer: D

Explanation:

In the OSI model, the Data Link Layer is responsible for node-to-node delivery of data. It frames the packets received from the Network Layer and prepares them for physical transmission. The Protocol Data Unit (PDU) for the Data Link Layer is called a "frame." Frames encapsulate the network layer packets, adding a header and a trailer that include the hardware addresses of the source and destination, among other things, facilitating the data link layer services like frame synchronization, flow control, and error checking.

NEW QUESTION # 35

Which statement is correct about the candidate configuration in the Junos OS?

- A. It is only used to restore the configuration to factory default settings
- B. It contains the most recent rescue configuration
- **C. It contains changes that have not been committed**
- D. It is created when you execute a commit from the CLI

Answer: C

Explanation:

In Junos OS, there are two main configuration databases:

* Candidate configuration: a working copy of the configuration that holds any uncommitted changes.

All configuration edits are made here.

* Active configuration: the running configuration that the system currently uses.

When you issue a commit command, the candidate configuration is promoted to active, replacing the previous configuration. Until that happens, all changes remain in the candidate configuration and do not affect device operation.

From Junos Fundamentals Guide:

"The candidate configuration is a separate copy of the configuration database. All changes are made to the candidate configuration and do not take effect until they are committed." References:

Juniper TechLibrary - Junos Configuration Fundamentals

JNCIA-Junos Exam Objective: Configuration Basics

NEW QUESTION # 36

Click the Exhibit button.

```
user@router> show route

inet.0: 13 destinations, 14 routes (13 active, 0 holdtdown, 0
hidden)
+ = Active Route, - = Last Active, * = Both

0.0.0.0/0          *[Static/5] 00:05:38
                   > to 172.29.1.1 via ge-0/0/3.0
```

Referring the exhibit, what does the highlighted number indicate?

- A. metric is 5
- B. route preference is 5
- C. hop count is 5
- D. cost is 5

Answer: B

Explanation:

In the exhibit shown, the highlighted number next to the route type (Static) within the square brackets indicates the route preference, also known as the administrative distance. In Junos, the route preference is a value that determines the priority of the route source. Lower numbers indicate a higher priority when the routing table is being calculated. The route preference is used to select the best route when multiple paths to the same destination exist from different routing sources. The number 5 is unusually low for a static route by default, suggesting it has been manually configured to override other route types.

NEW QUESTION # 37

Click the Exhibit button.

Exhibit

```
[edit protocols ospf]
user@router# show
area 0.0.0.0 {
  interface all;
}
export [ policy1 policy2 policy3 ];
[edit routing-options]
user@router# show
static {
  route 10.10.10.0/24 next-hop 192.168.1.254;
}
```

Referring to the exhibit, OSPF has three export policies that match different static route prefixes. The 10.10.10.0/24 static route does not match any terms in the policy1 routing policy.

What happens next in this scenario?

- A. The static route is evaluated by the policy3 routing policy.
- B. The static route is rejected by the policy1 routing policy.
- C. The static route is evaluated by the policy2 routing policy.
- D. The static route is rejected by the default routing policy.

Answer: C

Explanation:

In Junos, when multiple policies are applied to a routing protocol for route export, the routes are evaluated in the order in which the policies are listed. In the exhibit, the OSPF configuration has three export policies listed: policy1, policy2, and policy3. The static route 10.10.10.0/24 does not match any terms in policy1; therefore, it is not rejected by policy1 but is instead passed on to the next policy in the sequence, which is policy2.

If the static route matches a term in policy2 that permits the route, it will be exported into OSPF. If it does not match in policy2, it will then be evaluated by policy3. If there is no match in policy3 as well, and assuming there are no more policies listed, the route would then be subject to the default routing policy behavior, which typically rejects the route unless an explicit accept statement is present in the policies.

NEW QUESTION # 38

Click the Exhibit button.

Exhibit

```
user@router> show route

inet.0: 13 destinations, 14 routes (13 active, 0 holddown, 0
hidden)
+ = Active Route, - = Last Active, * = Both

0.0.0.0/0          *[Static/5] 00:05:38
                   > to 172.29.1.1 via ge-0/0/3.0
```

Referring the exhibit, what does the highlighted number indicate?

- A. metric is 5
- **B. route preference is 5**
- C. hop count is 5
- D. cost is 5

Answer: B

Explanation:

In the exhibit shown, the highlighted number next to the route type (Static) within the square brackets indicates the route preference, also known as the administrative distance. In Junos, the route preference is a value that determines the priority of the route source. Lower numbers indicate a higher priority when the routing table is being calculated. The route preference is used to select the best route when multiple paths to the same destination exist from different routing sources. The number 5 is unusually low for a static route by default, suggesting it has been manually configured to override other route types.

NEW QUESTION # 39

.....

The main key to passing the JN0-105 exam is to use your time affectionately and grasp every topic so you can attempt the maximum number of questions in the actual JN0-105 Exam. By studying the questions mentioned in the prep material, the candidates have control over the exam anxiety in no time.
