

Pass Guaranteed Quiz MuleSoft-Integration-Architect-I - High Hit-Rate Salesforce Certified MuleSoft Integration Architect I Exam Dumps

P.S. Free & New MuleSoft-Integration-Architect-I dumps are available on Google Drive shared by ExamTorrent:
<https://drive.google.com/open?id=1mTbvoiQbqzZAKzoNBxoOd6thvJO26us>

The software creates an Salesforce Certified MuleSoft Integration Architect I (MuleSoft-Integration-Architect-I) exam-like scenario for you which helps to kill anxiety about the Salesforce MuleSoft-Integration-Architect-I Certification Exams Questions. Customizable MuleSoft-Integration-Architect-I practice test software enables you to change settings of practice exam time and questions. Since the ExamTorrent software tracks your progress, you can know mistakes and overcome them before the Salesforce MuleSoft-Integration-Architect-I final test.

Salesforce MuleSoft-Integration-Architect-I Exam Syllabus Topics:

Topic	Details
Topic 1	• Designing Integration Solutions to Meet Persistence Requirements: It addresses the usage of VM queues and connectors, object stores and services, and stateful components configured with object stores.
Topic 2	• Designing Integration Solutions to Meet Reliability Requirements: It includes selecting alternatives to traditional transactions, recognizing the purpose of various scopes and strategies, differentiating disaster recovery and high availability, and using local and XA transactions.
Topic 3	• Designing for the Runtime Plane Technology Architecture: It includes analyzing Mule runtime clusters, designing solutions for CloudHub, choosing Mule runtime domains, leveraging Mule 4 class loader isolation, and understanding the reactive event processing model.
Topic 4	• Designing Integration Solutions to Meet Security Requirements: This topic emphasizes securing access to the Anypoint Platform and APIs, using Anypoint Security, counteracting security vulnerabilities, and understanding audit logging capabilities.

Topic 5	• Designing Automated Tests for Mule Applications: This topic covers unit test suites, and scenarios for integration and performance testing.
Topic 6	• Designing Architecture Using Integration Paradigms: This topic focuses on creating high-level integration architectures using various paradigms. It includes API-led connectivity, web APIs and HTTP, event-driven APIs, and message brokers, and designing Mule application using messaging patterns and technologies.
Topic 7	• Initiating Integration Solutions on Anypoint Platform: Summarizing MuleSoft Catalyst and Catalyst Knowledge Hub, differentiating between functional and non-functional requirements, selecting features for designing and managing APIs, and choosing deployment options are its sub-topics.
Topic 8	• Designing and Developing Mule Applications: It includes selecting application properties, using fundamental features, designing with core routers, understanding the Salesforce Connector, and leveraging core connectors.

MuleSoft-Integration-Architect-I Exam Certification - New MuleSoft-Integration-Architect-I Exam Prep

Some of our customers are white-collar workers with no time to waste, and need a Salesforce certification urgently to get their promotions, meanwhile the other customers might aim at improving their skills. Our reliable MuleSoft-Integration-Architect-I question dumps are developed by our experts who have rich experience in the fields. Constant updating of the MuleSoft-Integration-Architect-I Prep Guide keeps the high accuracy of exam questions thus will help you get use the MuleSoft-Integration-Architect-I exam quickly. During the exam, you would be familiar with the questions, which you have practiced in our MuleSoft-Integration-Architect-I question dumps. That's the reason why most of our customers always pass exam easily.

Salesforce Certified MuleSoft Integration Architect I Sample Questions (Q156-Q161):

NEW QUESTION # 156

During a planning session with the executive leadership, the development team director presents plans for a new API to expose the data in the company's order database. An earlier effort to build an API on top of this data failed, so the director is recommending a design-first approach.

Which characteristics of a design-first approach will help make this API successful?

- A. Building MUnit tests so administrators can confirm code coverage percentage during deployment
- B. Publishing the fully implemented API to Exchange so all developers can reuse the API
- C. Adding global policies to the API so all developers automatically secure the implementation before coding anything
- D. Developing a specification so consumers can test before the implementation is built

Answer: D

Explanation:

A design-first approach in API development focuses on creating a detailed API specification before any implementation begins. This specification acts as a contract that defines the API's endpoints, request/response formats, and error codes. By developing this specification early, potential consumers can provide feedback, and testing can be conducted against mock implementations to ensure the API meets their needs. This approach helps identify issues early in the development process, improving the likelihood of successful implementation and adoption.

NEW QUESTION # 157

According to MuleSoft, which system integration term describes the method, format, and protocol used for communication between

two system?

- A. Component
- B. interaction
- C. Message
- **D. Interface**

Answer: D

NEW QUESTION # 158

Which Mulesoft feature helps users to delegate their access without sharing sensitive credentials or giving full control of accounts to 3rd parties?

- **A. Connected apps**
- B. Secure Scheme
- C. client id enforcement policy
- D. Certificates

Answer: A

Explanation:

Connected Apps

The Connected Apps feature provides a framework that enables an external application to integrate with Anypoint Platform using APIs through OAuth 2.0 and OpenID Connect. Connected apps help users delegate their access without sharing sensitive credentials or giving full control of their accounts to third parties.

Actions taken by connected apps are audited, and users can also revoke access at any time. Note that some products do not currently include client IDs in this release of the Connected Apps feature. The Connected Apps feature enables you to use secure authentication protocols and control an app's access to user data.

Additionally, end users can authorize the app to access their Anypoint Platform data.

NEW QUESTION # 159

Which Salesforce API is invoked to deploy, retrieve, create or delete customization information such as custom object definitions using a Mule Salesforce connector in a Mule application?

- **A. REST API**
- B. Bulk API
- C. SOAP API
- D. Metadata API

Answer: A

NEW QUESTION # 160

An integration Mule application consumes and processes a list of rows from a CSV file. Each row must be read from the CSV file, validated, and the row data sent to a JMS queue, in the exact order as in the CSV file.

If any processing step for a row fails, then a log entry must be written for that row, but processing of other rows must not be affected.

What combination of Mule components is most idiomatic (used according to their intended purpose) when Implementing the above requirements?

- A. VM connector first Successful scope On Error Propagate scope
- B. Scatter-Gather component On Error Continue scope
- **C. For Each scope On Error Continue scope**
- D. Async scope On Error Propagate scope

Answer: C

Explanation:

* On Error Propagate halts execution and sends error to the client. In this scenario it's mentioned that "processing of other rows must not be affected" so Option B and C are ruled out.

* Scatter gather is used to club multiple responses together before processing. In this scenario, we need sequential processing. So option A is out of choice.

* Correct answer is For Each scope & On Error Continue scope Below requirement can be fulfilled in the below way

1) Using For Each scope, which will send each row from csv file sequentially. each row needs to be sent sequentially as requirement is to send the message in exactly the same way as it is mentioned in the csv file

2) Also other part of requirement is if any processing step for a row fails then it should log an error but should not affect other record processing. This can be achieved using On error Continue scope on these set of activities. so that error will not halt the processing. Also logger needs to be added in error handling section so that it can be logged.

* Attaching diagram for reference. Here it's try scope, but similar would be the case with For Each loop.

NEW QUESTION # 161

.....

Although the pass rate of our MuleSoft-Integration-Architect-I study materials can be said to be the best compared with that of other exam tests, our experts all are never satisfied with the current results because they know the truth that only through steady progress can our MuleSoft-Integration-Architect-I Preparation braindumps win a place in the field of exam question making forever. Therefore, buying our MuleSoft-Integration-Architect-I actual study guide will surprise you with high grades and you are more likely to get the certification easily.
