# Pass Guaranteed Quiz OGA-032 - ArchiMate 3 Part 2 Exam Pass-Sure Exam Materials
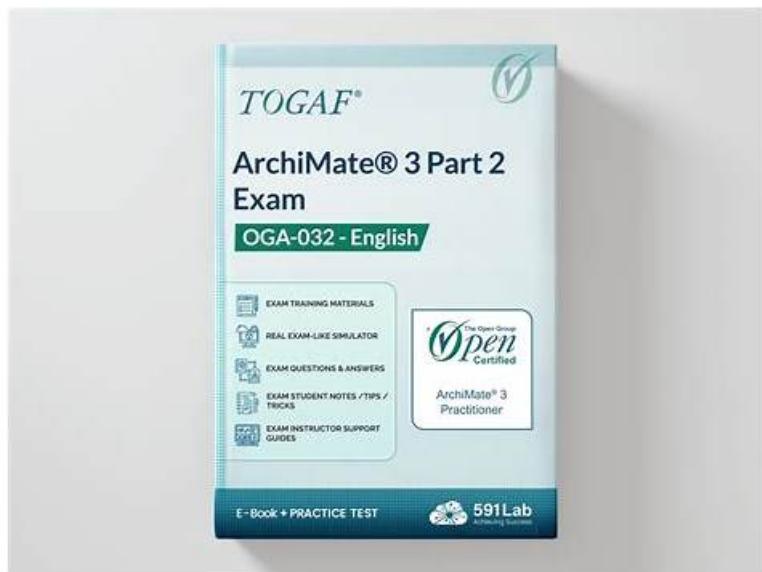

PracticeDump also provides easy to use OGA-032 practice test brain dump preparation software for OGA-032. Moreover, after the date of purchase of the OGA-032 testing engine, you will receive free updates for 90 days. The OGA-032 dumps practice test software is easy to install and has a simple interface. The practice test software for OGA-032 Exam provides a real feel of an exam and allows you to test your skills for the exam. The OGA-032 software comes with multiple features including the self-assessment feature. You will get free updates for 90 days after the purchase date that will allow you to get latest and well-curated questions for the OGA-032 exam.

The Open Group OGA-032 (ArchiMate 3 Part 2) Certification Exam is a professional certification designed for individuals who want to demonstrate their proficiency in using the ArchiMate modeling language. The ArchiMate modeling language is a graphical language used to describe enterprise architectures, and it provides a common language for stakeholders to understand complex enterprise architectures. ArchiMate 3 Part 2 Exam certification exam is the second part of the ArchiMate 3 Certification program, and it focuses on the advanced concepts and techniques of the ArchiMate modeling language.

Marvelous Exam OGA-032 Materials by PracticeDump

Using PracticeDump's OGA-032 test certification training materials to pass OGA-032 certification exam is easy. Our OGA-032 test certification training materials is made up of senior IT specialist team through their own exploration and continuous practice and research. Our PracticeDump's OGA-032 test certification training materials can help you in your first attempt to pass OGA-032 exam easily.

The Open Group ArchiMate 3 Part 2 Exam Sample Questions (Q10-Q15):

NEW QUESTION # 10
Please read this scenario prior to answering the question
ArchiCar has been a market leader in the premium priced luxury car sector for the last decade. Its product leadership strategy has brought superior products to market, and enabled ArchiCar to achieve premium prices for its cars. This strategy has been widely successful in the past, but recently competitors have been offering comparable products and taking significant market share. The governing board of ArchiCar has identified opportunities in emerging markets where the ArchiCar brand is associated with luxury and high performance products, but is thought to be too expensive for mass-market success. Based on this assessment, the board has made the decision to setup a subsidiary company to mass- produce affordable cars locally. This will be achieved by focusing on a strategy of operational excellence. Such a strategy is ideal for such markets where customers value cost over other factors.
To facilitate this strategic transformation, the project has been divided into multiple phases within a five-year program. The initial phase, known as "Achieving Operational Excellence," is underway. The engineering team has begun devising an action plan to drive

the necessary changes and outlining the technological conditions that must be met. The product architect has identified three current capabilities - industry-leading engineering, high-quality materials sourcing, and cutting-edge focussed R&D - along with their contributions to the new production philosophy.

Moving forward, it has been determined that two out of the three current capabilities require revision.

Materials sourcing needs to be adjusted to meet optimization demands, and R&D targets must align with future goals to enable affordable production. Additionally, process engineering is introduced as a fourth capability to shift the company's focus from products to a process-oriented approach.

The Enterprise Architecture team has been tasked with migration planning, and identifying key work packages and deliverables. They have identified two transition states between the current and future scenario.

The first transition aims to adjust

current capabilities, including revising the R&D approach and procurement strategy. The second transition aims to shift from a product-centric mindset to a process-focused approach and adjust materials sourcing accordingly. It is important to consider existing supplier contracts that cannot be immediately canceled during this process.

The Enterprise Architecture team has identified that the second transition must implement a process framework, in order to shift to a process focus and meet a number of requirements, including the requirement for end-to-end process thinking. As this requirement impacts procurement processes, it also impacts the procurement strategy.

Refer to the Scenario

You have been asked to model parts of the overall scenario, including migration planning, the motivations driving the migration, and the work packages necessary to achieve the desired deliverables.

Which of the following answers best describes the scenario?

- A. A diagram of process flow Description automatically generated
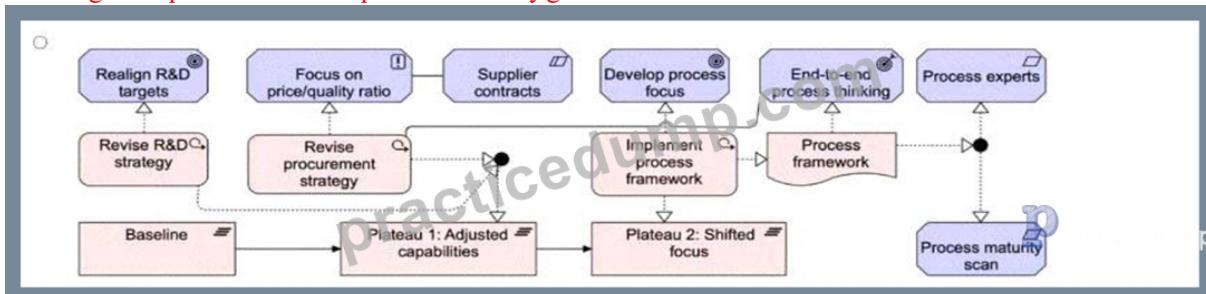

- B. A diagram of a process Description automatically generated
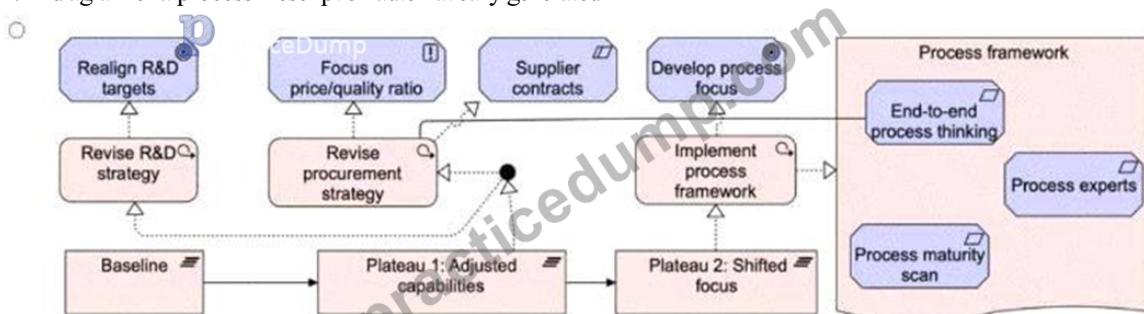

- C. A diagram of a process Description automatically generated

- D. A diagram of a process Description automatically generated

Realign R&D targets | Focus on price/quality ratio | Supplier contracts | Develop process focus | End-to-end process thinking | Process experts

Revise R&D strategy | Revise procurement strategy | Implement process framework | Process framework

Baseline | Plateau 1: Adjusted capabilities | Plateau 2: Shifted focus | Process maturity scan
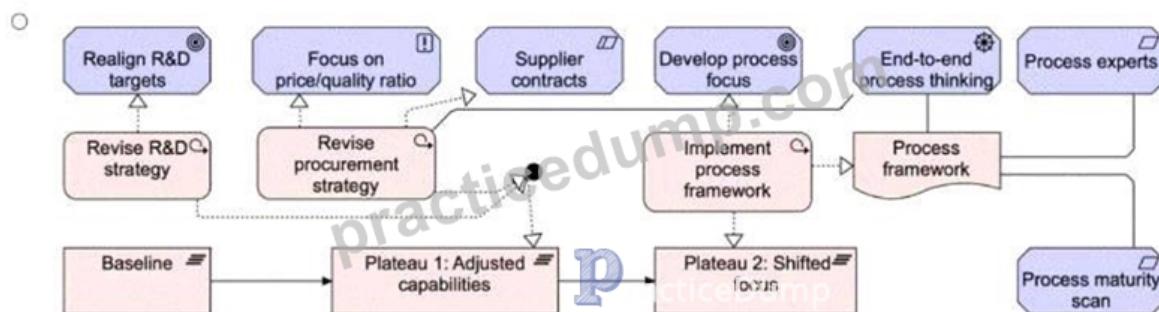

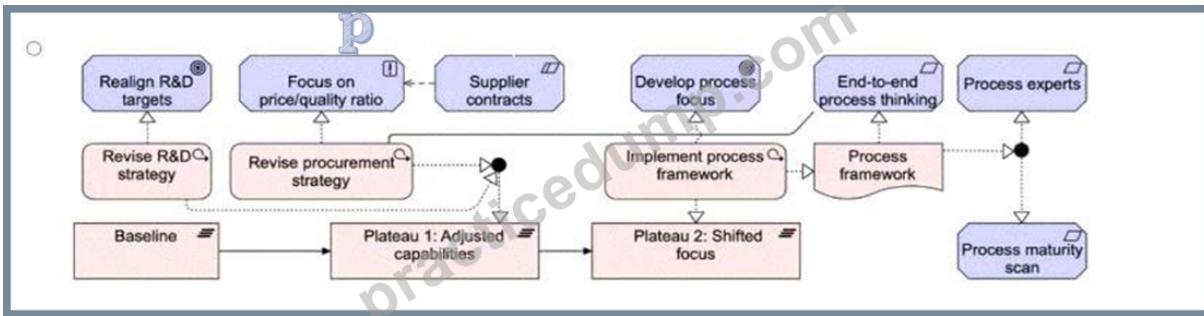

Answer: A

Explanation:
This scenario involves migration planning for ArchiCar as it transitions from a product-centric approach to an operational excellence strategy for mass-producing affordable cars in emerging markets. The task is to model the steps involved, including work packages, deliverables, and the motivations driving the transitions.
Key ArchiMate® 3.2 Concepts Applied:
* Capabilities and Transition Phases:
* The existing capabilities-R&D, material sourcing, and engineering-need to be adjusted to fit the new strategy. In particular:
* Revising R&D targets to align with the goal of affordable production.
* Revising the procurement strategy to optimize material sourcing.
* Introduction of a process focus in the second phase to shift from a product-centered approach to operational excellence.
* Two transition states are identified:
* Plateau 1 (Adjusted Capabilities):Focuses on revising the R&D strategy and procurement strategy.
* Plateau 2 (Shifted Focus):Involves shifting to a process-oriented focus, adjusting material sourcing, and implementing a process framework to enable end-to-end process thinking.
* Work Packages and Deliverables:
* Work packages include activities such as revising R&D strategy and procurement strategy during the first transition, and then developing process focus and implementing a process framework in the second transition.
* These work packages are linked to key deliverables:
* Plateau 1: Realigning R&D and procurement strategies to achieve adjusted capabilities.
* Plateau 2: Implementing a process framework, shifting to process-oriented thinking, and achieving the operational excellence goals.
* Motivation Elements:
* The migration is driven by a need to align current capabilities (such as focusing R&D on affordability and optimizing procurement) and a requirement to shift focus from product leadership to operational excellence.
* The external driver is the competition and market opportunity in emerging markets, where cost is more critical than luxury.
* Dependencies and Constraints:
* Supplier contracts may impose constraints on how quickly procurement strategies can change, which is considered in the transition planning.
* The process framework must be implemented in a way that supports end-to-end process thinking
.
Why Option B is Correct:
* Option B accurately reflects the two transition phases (Plateaus 1 and 2) and shows the appropriate work packages and deliverables in line with the scenario.
* It clearly models the steps for revising R&D strategy and procurement strategy in the first transition, and the shift to a process focus in the second transition.
* The process framework and its link to end-to-end process thinking and procurement strategy are also correctly modeled, fulfilling the requirements of the scenario.
* Motivations for the changes, such as the focus on the price/quality ratio, and the external drivers for shifting strategy are well captured.
Why Other Options Are Incorrect:
* Option A and Option C misrepresent or omit important relationships between work packages, such as the link between the process framework and the end-to-end process thinking.
* Option D does not correctly capture the sequence of work packages and the logical flow of transitions between phases.
Conclusion:
Option B provides the most complete and accurate description of the scenario, correctly illustrating the migration planning, motivations, and the work packages necessary to achieve the target state. It aligns well with ArchiMate® 3.2 modeling standards and meets the scenario's requirements.

Please read this scenario prior to answering the question

ArchiSurance has decided to leverage its financial expertise by offering defined contribution retirement plans.

Each trading day, ArchiSurance submits consolidated mutual fund trading transactions to a stock exchange on behalf of its retirement plan participants.

The daily mutual fund trading cycle consists of four key processes: Transaction capture, pricing, trading and reconciliation.

Transaction capture consists of two sub-processes: manual exchange and loans and distributions (L&D). For transaction capture, retirement plan participants use an online account management application to enter manual fund exchange transactions. For L&D, plan participants use a separate application to enter requests. The L&D application determines whether the request can be fulfilled based on the mutual fund balances held in each plan balances and a set of business rules. Each day's captured manual exchange transactions accumulate in a transaction database.

ArchiSurance contracts with a third-party information service to receive a file of mutual fund prices at the close of each trading day. The pricing application uses this file to convert captured transaction into trades, and then validates each trade against the mutual fund balances held in each plan. The pricing application generates a trade file with the minimum number of trades necessary. The trading application sends this file to an external trading service. When the trading application receives a confirmation file back from the trading service, it passes it to the reconciliation application, which updates the plan recordkeeping database.

The lead application Architect has decided to merge the pricing application, the trading application and the reconciliation application into one application, which will be serving the pricing, trading and reconciliation processes respectively. The reason for this is that maintenance costs for these three components are too high and the performance is too slow. This implementation will increase the performance and lower the maintenance cost significantly.

The CIO has agreed on this plan, but wants this to be done in two phases, each in a separate project. Phase 1 should include the merger of the Trading and Pricing applications. Phase 2 should then merge the merged applications with the Reconciliation application respectively. Each project phase has a number of defined deliverables. Phase 1 has two deliverables, TraPri application implemented and tested' and 'Active TraPri application', whichtogether form a first transition architecture. Phase 2 has two deliverables, 'Recon 2.0 application implemented and tested' and 'Back-up applications phased out', which together form the second transition architecture. These two projects are part of the ArchiSurance application integration program scheduled for the next 6 months.

Refer to the Scenario

You have been asked by the lead application architect to show how the applications used for daily trading can be migrated. This should include a description of the work packages, deliverables and transition architectures.

Which of the following answers best describes the applications and migration plan?

- A. A diagram of a process AI-generated content may be incorrect.
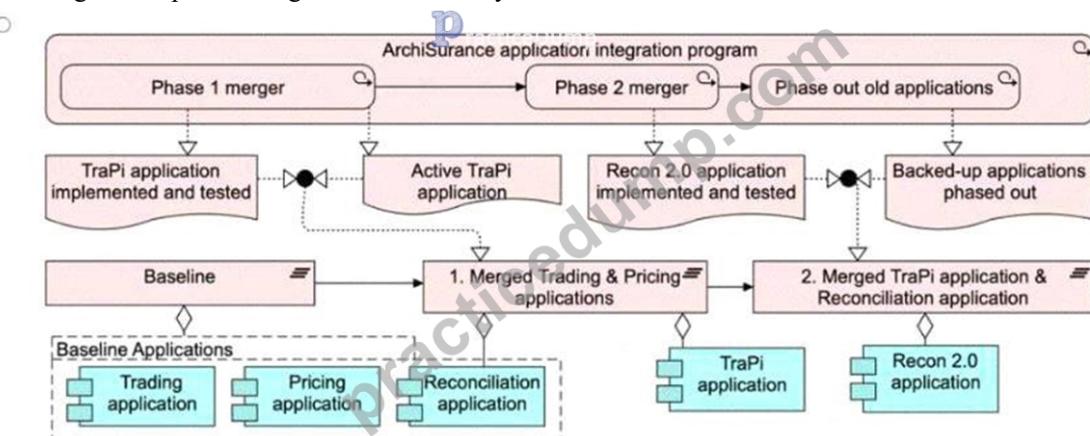

- B. A diagram of a trading application AI-generated content may be incorrect.
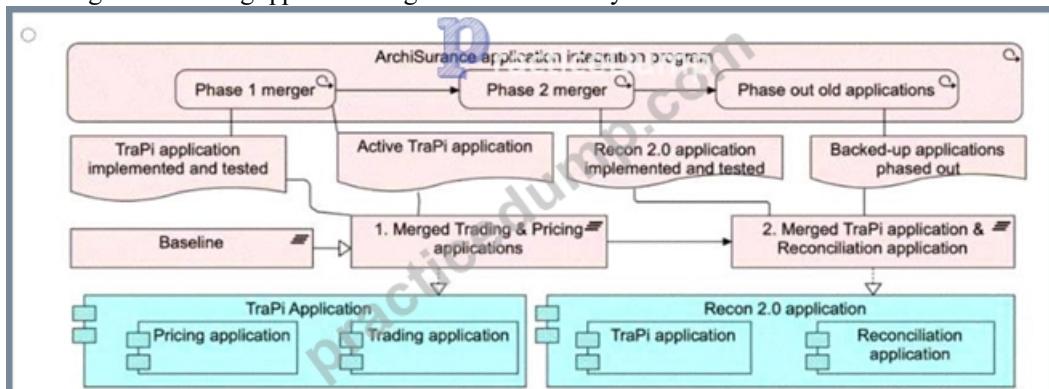

- C. A diagram of a process flow AI-generated content may be incorrect.
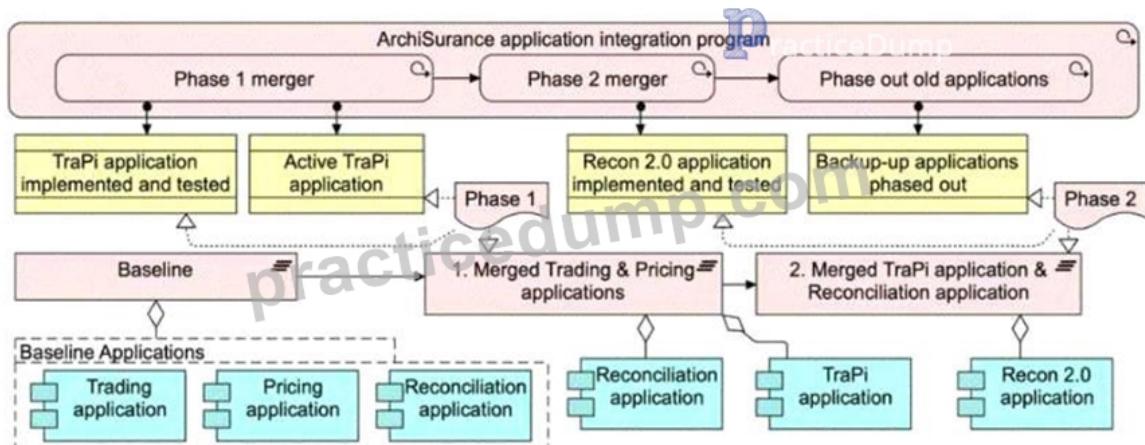

- D. A diagram of a process flow AI-generated content may be incorrect.
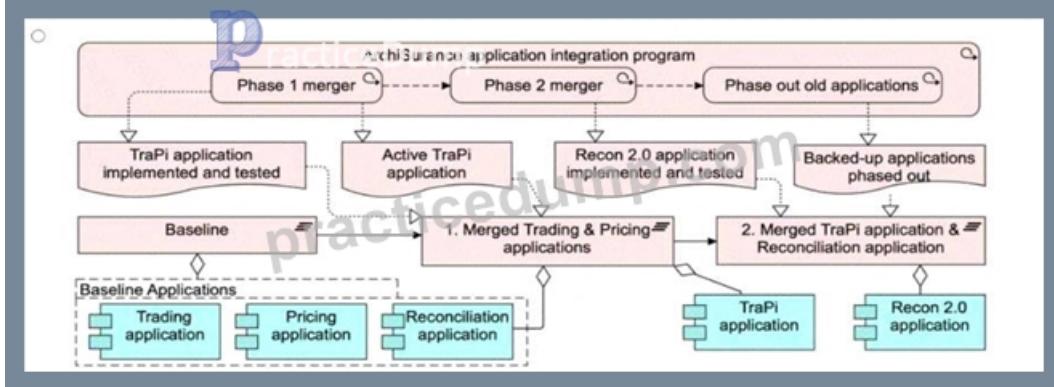

Answer: D

Explanation:
We need to determine the best model that:
* Shows the current applications and their functions- Pricing, Trading, and Reconciliation applications.
* Represents the migration phases-
* Phase 1:Merges the Trading and Pricing applications intoTraPri.
* Phase 2:MergesTraPriwith the Reconciliation application to createRecon 2.0.
* Includes transition architectures- Each phase has distinct deliverables marking the transition from old applications to new merged applications.
* Shows the work packages and dependencies- The sequence of activities leading to the final implementation.
Why D is the Best Choice:
#Clearly distinguishes baseline (existing) applications and the new applicationsafter the migration.# Illustrates the two transition states correctly-
* First transition:Implementation and activation of theTraPriapplication.
* Second transition:Implementation ofRecon 2.0and phase-out of backup applications.#Depicts the migration process sequentially-Ensuring a clear understanding of how the applications evolve over time.#Work packages and deliverables are well structured-Aligning with the phases described in the scenario.
Why Not A, B, or C?
* A:Does not correctly represent the transition phases and their deliverables.
* B:Lacks clarity in differentiating baseline applications from transition architectures.
* C:Misrepresents dependencies and transition states, making the migration process unclear.

NEW QUESTION # 12
Please read this scenario prior to answering the question
The ArchiSurance senior management, board members, customers, and major stockholders have expressed long-standing concerns regarding the business continuity risks associated with relying on a single data center.
Located in an area prone to
flooding, earthquakes, and occasional water leaks from the cafeteria above, the current data center has significant vulnerabilities.

To address these concerns and mitigate the risks, ArchiSurance has developed a comprehensive plan to relocate its existing data center to two separate ready-to-use data centers in different cities. As a major undertaking, the approval of the Board of Directors is required to proceed with the project.

The primary objectives of the data center move are to reduce the risk of business interruptions, reduce both planned and unplanned downtime for critical applications, and provide reassurance to ArchiSurance stakeholders. Ensuring minimal disruption during the transition is crucial. However, several constraints make the planned migration to the new data centers particularly challenging. Certain critical ArchiSurance applications cannot be offline for more than one hour, and any planned downtime must be restricted to specific four-hour windows on weekends. Additionally, the migration cannot take place during quarterly or year-end closing periods to avoid disrupting critical processing operations.

ArchiSurance management has devised a multi-phase data center transformation program to facilitate a smooth transition. Each phase is critical for establishing stable and fully functional data center configurations throughout the transformation process.

The initial phase entails detailed scheduling and planning to develop a comprehensive transformation plan aligned with ArchiSurance's timing and scheduling requirements. During the second phase, ArchiSurance will procure the necessary hardware and software for the new data centers, while also seeking refunds for the hardware and software in the current data center once it is decommissioned. The third phase involves setting up the new data centers and conducting parallel testing of the new hardware and software alongside the existing production environment. The transition between the old and new data centers occurs in the fourth phase, followed by the fifth phase, which is the decommissioning of the old data center. This involves returning the hardware and software to obtain the contracted refunds. Each phase, from the second to the fifth, is initiated once specific conditions outlined in the previous phase have been met.

Refer to the Scenario

The IT department's leader has assigned you the task of creating a model to explain the rationale behind Archisurance's decision to transform its data center infrastructure. The model should show the concerns and motivations of the stakeholders involved. Additionally, it should outline the specific goals to be achieved through the data center transformation program, the associated deliverables, and the limitations that must be considered throughout the program's implementation.

Which of the following answers provides the best explanation?

- A. A diagram of a data center AI-generated content may be incorrect.

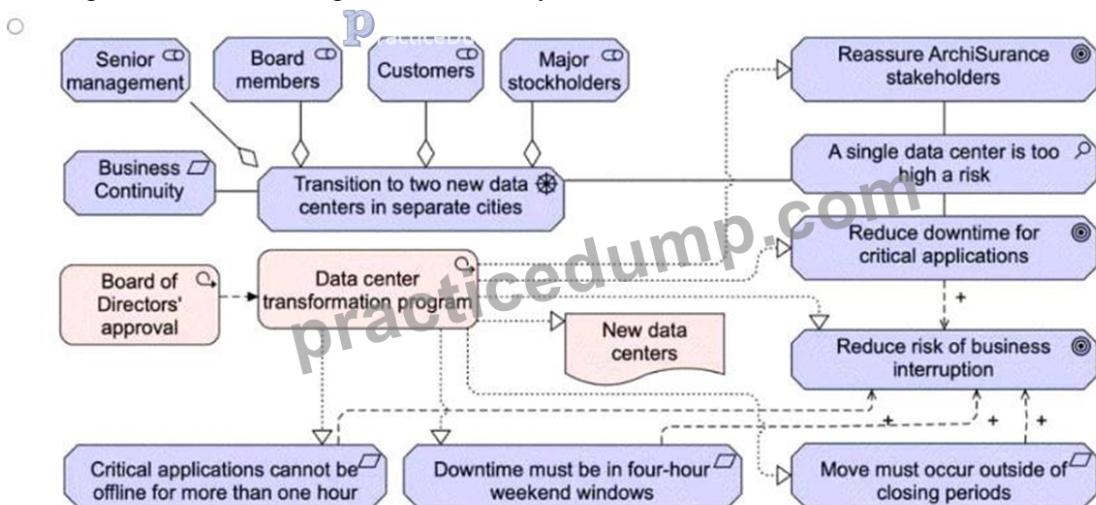

- B. A diagram of a data center AI-generated content may be incorrect.
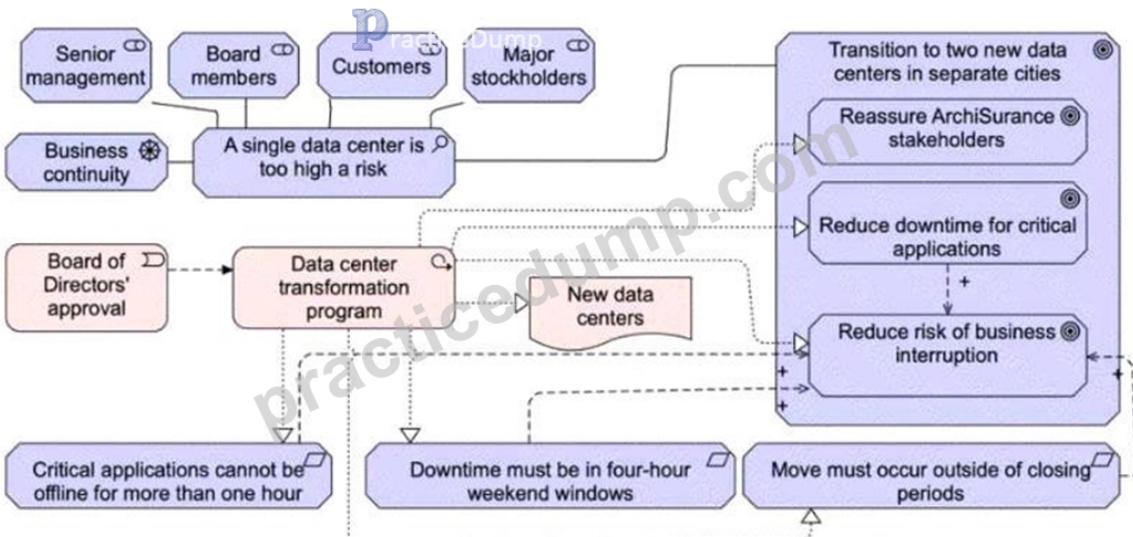

- C. A diagram of data center AI-generated content may be incorrect.
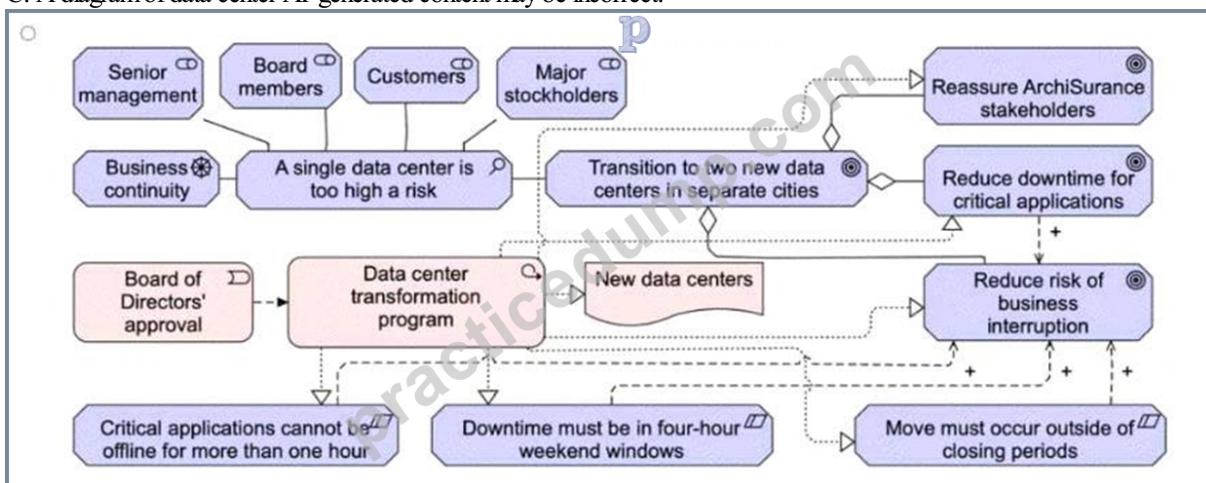

- D. A diagram of data center AI-generated content may be incorrect.
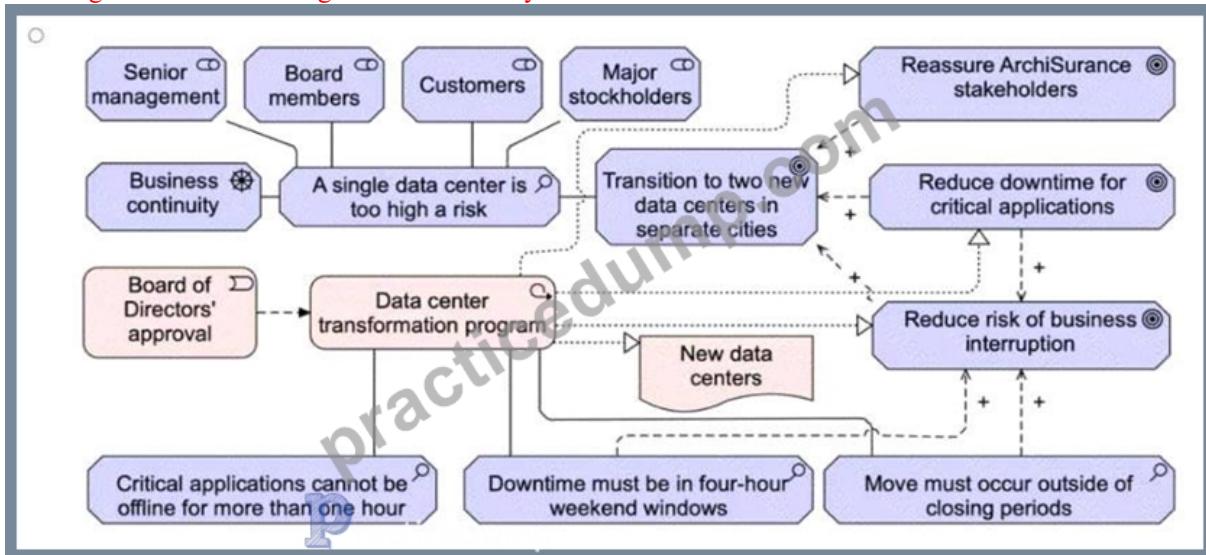

Answer: D

Explanation:
We need to identify the most accurate and complete model that explains:
* Stakeholder Concerns & Motivations- Including senior management, board members, customers, and stockholders.
* Objectives & Goals- Reducing business risks, minimizing downtime, and reassuring stakeholders.
* Deliverables- The transition to two new data centers and data center transformation program.
* Constraints & Requirements-Planned downtime limits, critical application uptime requirements, and scheduling constraints.

Why C is the Best Choice:

#Includes all stakeholder concerns- Clearly represents business continuity risks and the rationale for transitioning to two new data centers.#Clearly defines the objectives- Reducing downtime and risk of business interruption.#Shows key constraints-

* Critical applications cannot be offline for more than one hour.

* Downtime must be in four-hour weekend windows.

* The migration must avoid closing periods.#Links deliverables to objectives- The data center transformation program and new data centers are clearly positioned as solutions.#Represents dependencies correctly- Showing how each motivation leads to a goal, which leads to a deliverable.

Why Not A, B, or D?

* A:Does not establish a strong link between the concerns and the solution clearly enough.

* B:The structure does not align well with the scenario requirements, and some constraints and dependencies are missing.

* D:Overcomplicates some relationships and does not emphasize stakeholder concerns effectively.

NEW QUESTION # 13

Please read this scenario prior to answering the question

The IT Operations (IT Ops) department at ArchiSurance has five core responsibilities, each encompassing a dedicated business process: (1) Batch Operations (Batch Ops), (2) Online Operations (Online Ops), (3) Security Operations (Security Ops), (4) User Support and (5) Continuous Improvement. Service level agreements (SLAs) are in place for Batch Ops and Online Ops, and each Ops process generates monitoring data that is utilized by the Continuous Improvement process.

The System Ops category consists of Batch Ops, Online Ops, and Security Ops, each having an incident management sub-process. These sub-processes are triggered by Batch, Online, and Security Incidents, respectively. In the initial stages of the incident management sub-processes, an Incident Alert is shared with the other System Ops processes by posting it to the Alert Buffer.

Batch Ops relies on a schedule that outlines all batch jobs and their dependencies. This schedule serves two sub-processes: Batch Planning, which updates the schedule for use by the Execution Management sub-process.

The Batch Ops process relies on a suite of interconnected applications to facilitate its operations. Among these applications, the Batch Scheduler plays a vital role by allowing users to manage a comprehensive database of jobs, job schedules, and dependencies. It effectively launches batch jobs according to the information stored in the database.

Working in conjunction with the Batch Scheduler, the Batch Monitor application utilizes the job schedules as a reference point to monitor job execution. It identifies any exceptional conditions that may arise during the execution process. To ensure effective handling of these exceptions, the Batch Monitor communicates the information to both the Batch Scheduler and the Incident Handler applications through the previously mentioned Alert Buffer.

The Incident Handler application operates based on a defined set of business rules. It uses these rules to determine the relevant systems and individuals that need to be notified in the event of each incident.

Subsequently, the Incident Handler

application generates appropriate notifications according to these determinations.

Recognizing the criticality of the Batch Scheduler, Batch Monitor, and Incident Handler applications, ArchiSurance has implemented redundant hosting arrangements across multiple geographically distributed data centers. In each data center, these three applications are supported by fully redundant virtual server clusters. Each cluster is connected to two site local area networks, both of which are further linked to separate storage array hardware devices.

Refer to the scenario

As part of an IT service management initiative, you have been assigned the task to show how applications and technology support the Batch Ops process. This should show the relationships between the applications, their functions, the data they access, and the technology that hosts the applications and data, along with the networks that connect the servers. It is only necessary to model a single data center.

Which of the following answers provides the most complete and accurate model?

* A. A diagram of a firefighter Description automatically generated
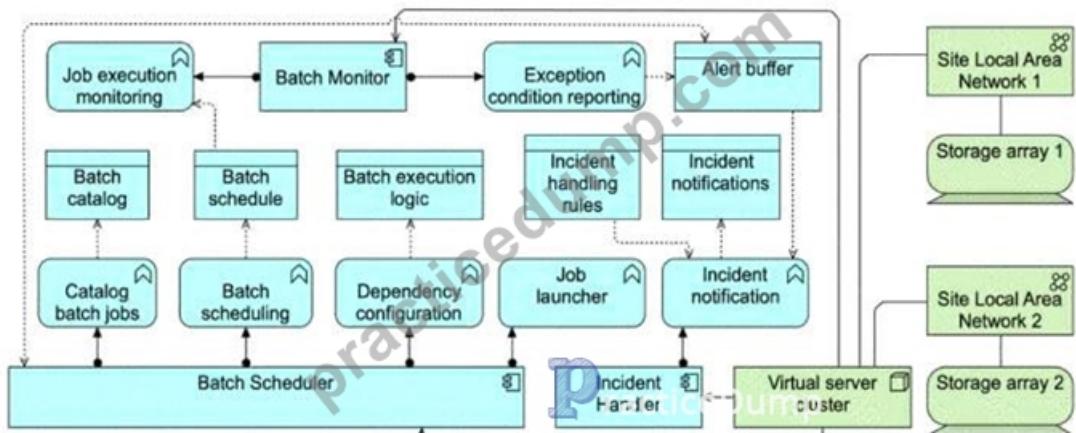

- B. A diagram of a work flow Description automatically generated
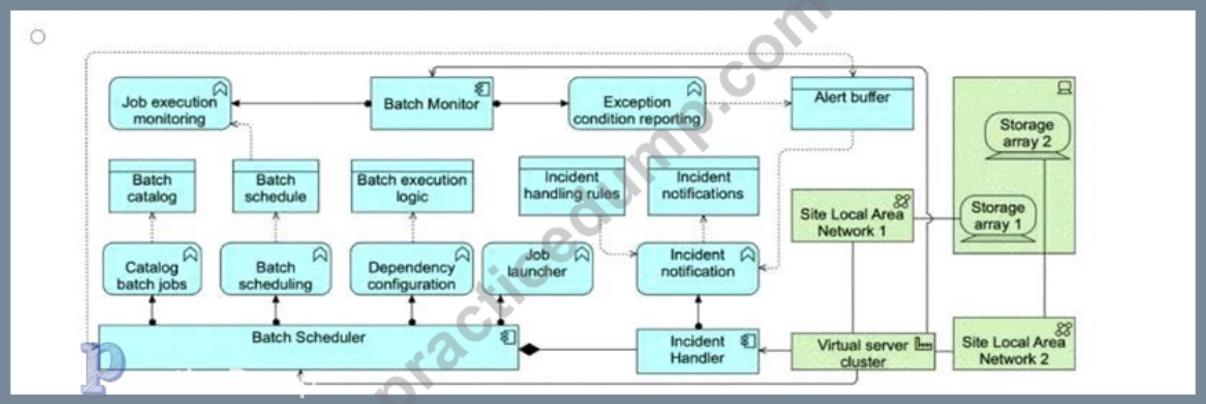

- C. A diagram of a software system Description automatically generated with medium confidence
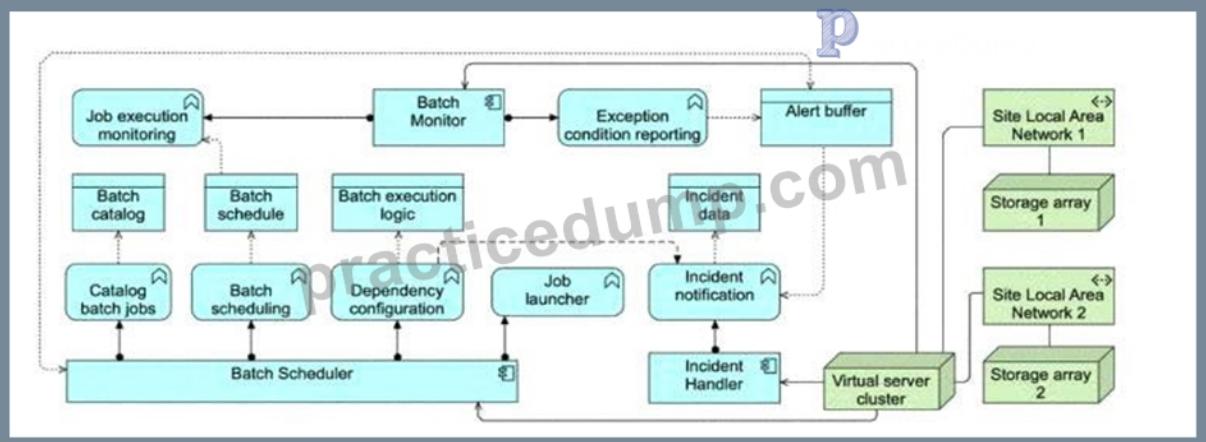

- D. A diagram of a work flow Description automatically generated
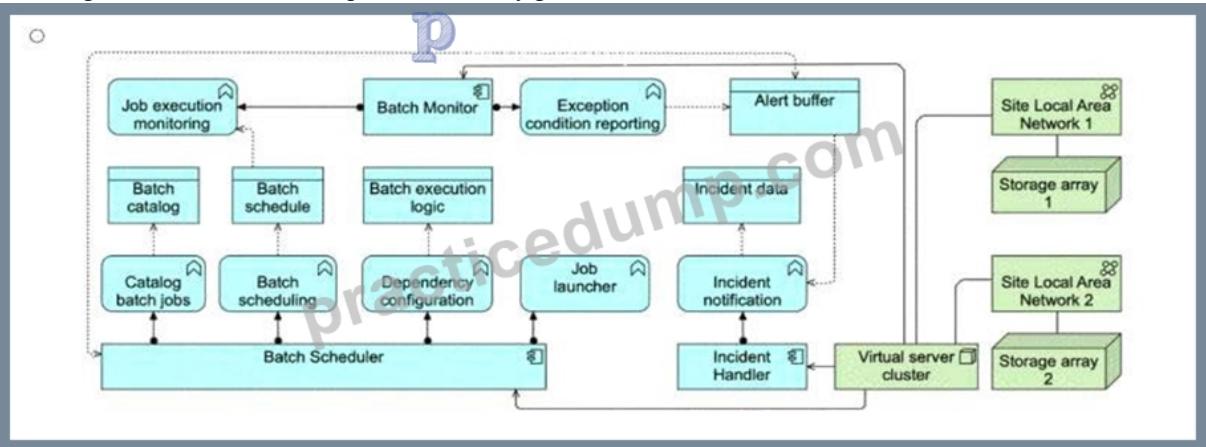

Answer: A

Explanation:
The correct answer isCas it provides the most complete and accurate model according to the ArchiMate® 3 framework and the given scenario.
Here's why:
* Business Processes and Sub-Processes:
* Batch Operations (Batch Ops)is one of the core responsibilities in IT Operations, and its processes are modeled clearly. TheBatch Scheduleris responsible for managing batch jobs, schedules, and dependencies.
* TheBatch Monitoris correctly shown to monitor the job execution and notify exceptions using theAlert Buffer.
* TheIncident Handleris used to notify relevant systems and individuals, triggered by the incident detection fromBatch Monitor. This is modeled by the use of incident handling rules and notifications.
* Application Layer (Application Components and Functions):
* TheBatch Scheduler,Batch Monitor, andIncident Handlerare accurately depicted as the main applications. These applications are crucial for managing job scheduling, monitoring execution, and handling incidents.
* These applications share the same virtual server cluster, which is an important detail reflecting redundancy and high availability, which was mentioned in the scenario.
* The interrelationships between applications are accurately depicted: theBatch Schedulerlaunches jobs, theBatch Monitorchecks their status, andIncident Handlerdeals with exceptions.
* Data Access:
* TheBatch Scheduleraccesses and updates batch jobs and schedules, and this is represented clearly.
* TheIncident dataandIncident notificationsare accurately modeled as being used byIncident Handler.
* Technology Layer:
* TheVirtual server cluster,Storage arrays, andSite Local Area Networksare appropriately connected to support the application infrastructure.
* Redundancy is shown through the use of multiple storage arrays and network connections, as described in the scenario.
* Accuracy in Relationship Types (ArchiMate® 3) References:
* The relationships between components are modeled using ArchiMate® 3 standards, such as flow relationships between the Batch Monitor and Alert Buffer or between the Incident Handler and storage components.
* Triggeringrelationships exist between the applications that manage batch jobs and the monitoring
/notification process, ensuring correct job execution and incident handling.
Conclusion:AnswerCis the most complete model, as it accurately reflects the roles of the various applications, their interactions, and the underlying technology components in support of theBatch Ops process, following the guidelines and modeling standards of ArchiMate® 3.

NEW QUESTION # 14

Please read this scenario prior to answering the question
ArchiCar has been a market leader in the premium priced luxury car sector for the last decade. Its product leadership strategy has brought superior products to market, and enabled ArchiCar to achieve premium prices for its cars. This strategy has been widely successful in the past, but recently competitors have been offering comparable products and taking significant market share. The governing board of ArchiCar has identified opportunities in emerging markets where the ArchiCar brand is associated with luxury and high performance products, but is thought to be too expensive for mass-market success.
Based on this assessment, the board has made the decision to setup a subsidiary company to mass-produce affordable cars locally. This will be achieved by focusing on a strategy of operational excellence. Such a strategy is ideal for such markets where customers value cost over other factors.
To facilitate this strategic transformation, the project has been divided into multiple phases within a five-year program. The initial phase, known as "Achieving Operational Excellence," is underway. The engineering team has begun devising an action plan to drive the necessary changes and outlining the technological conditions that must be met. The product architect has identified three current capabilities - industry-leading engineering, high-quality materials sourcing, and cutting-edge focussed R&D - along with their contributions to the new production philosophy.
Moving forward, it has been determined that two out of the three current capabilities require revision.
Materials sourcing needs to be adjusted to meet optimization demands, and R&D targets must align with future goals to enable affordable production.
Additionally, process engineering is introduced as a fourth capability to shift the company's focus from products to a process-oriented approach.
The Enterprise Architecture team has been tasked with migration planning, and identifying keywork packages and deliverables. They have identified two transition states between the current and future scenario. The first transition aims to adjust current capabilities, including revising the R&D approach and procurement strategy. The second transition aims to shift from a product-centric mindset to a process-focused approach and adjust materials sourcing accordingly.
It is important to consider existing
supplier contracts that cannot be immediately canceled during this process.

The Enterprise Architecture team has identified that the second transition must implement a process framework, in order to shift to a process focus and meet a number of requirements, including the requirement for end-to-end process thinking. As this requirement impacts procurement processes, it also impacts the procurement strategy.

Refer to the Scenario

You have been tasked with modeling the current capabilities of ArchiCar, identifying the capabilities necessary for the company to achieve Operational Excellence, and showing the motivations behind these changes Which of the following models best answers this?

- A. A diagram of a process AI-generated content may be incorrect.
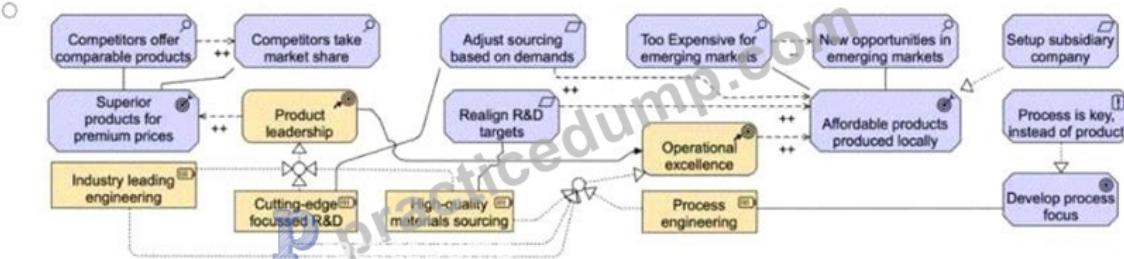

- B. A diagram of a process AI-generated content may be incorrect.
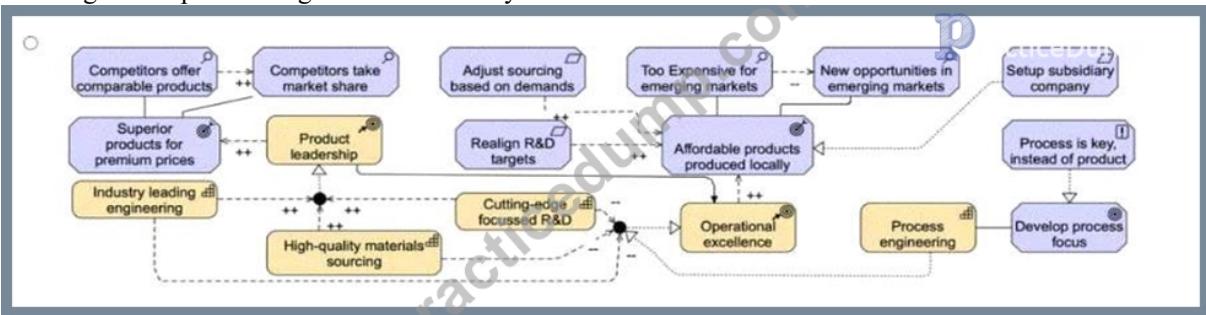

- C. A diagram of a process AI-generated content may be incorrect.
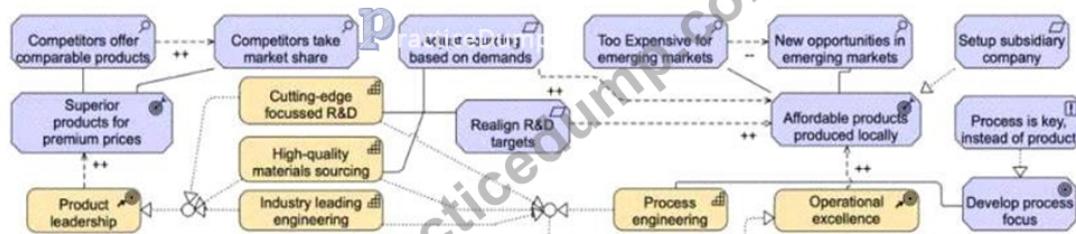

- D. A diagram of a process AI-generated content may be incorrect.
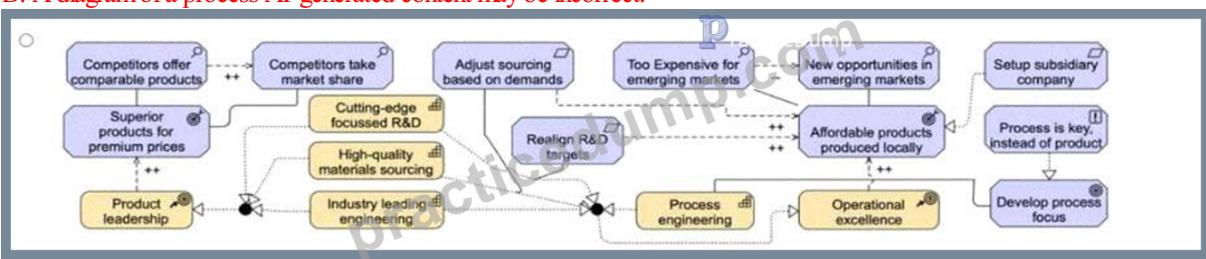

Answer: D

Explanation:
We need to find the model that best represents:
* Current Capabilities- Industry-leading engineering, high-quality materials sourcing, and cutting-edge focused R&D.
* Strategic Shift- Moving from product leadership to operational excellence to enter emerging markets.
* Required Changes-
* Adjusting R&D targets to support cost-effective production.
* Revising materials sourcing for optimization.
* Introducing process engineering to enable a process-oriented mindset.
* Motivations Behind the Changes-
* Competitor pressure.
* Emerging market opportunities.
* High costs limiting mass-market success.

Why D is the Best Choice:

#Includes all current and future capabilities- Shows the existing strengths of engineering, R&D, and materials sourcing while introducing process engineering as required for operational excellence.#Clearly depicts the shift in strategy- From product leadership to operational excellence and the necessary transformations.#Captures stakeholder concerns and motivations-Including competition, cost concerns, and emerging market opportunities.#Represents dependencies and sequencing correctly-Reflecting how each capability change contributes to the transition states and ultimate business goals.

Why Not A, B, or C?

* A:Does not properly represent the transition between product leadership and operational excellence.
* B:Fails to clearly define the required capability changes and motivations.
* C:Lacks key relationships between strategy shifts and operational changes.
