If you have interests with our H13-624_V5.5 practice materials, we prefer to tell that we have contacted with many former buyers of our H13-624_V5.5 exam questions and they all talked about the importance of effective H13-624_V5.5 learning prep playing a crucial role in your preparation process. Our practice materials keep exam candidates motivated and efficient with useful content based wholly on the real H13-624_V5.5 Guide materials.

Huawei H13-624_V5.5 Exam Syllabus Topics:

Topic	Details
Topic 1	Storage Technology Trends: This section of the exam measures skills of a Data Center Specialist and covers the latest advancements in the storage industry. It focuses on emerging technologies that are shaping intelligent storage development, including trends like AI integration, green computing, and cloud-oriented storage evolution. Candidates are expected to understand how these trends influence storage planning and deployment in modern IT environments.
Topic 2	Storage System O&M Management: This section of the exam measures the skills of a Storage Operations Specialist and covers the daily operational management of Huawei storage systems. It emphasizes practical abilities in system monitoring, troubleshooting, fault handling, and health checks. The goal is to ensure smooth, reliable operations and reduce risks through proactive maintenance and efficient use of Huawei's O&M tools.
Topic 3	Huawei Intelligent Storage Products and Features: This section of the exam measures the skills of a Storage Administrator and focuses on Huawei's intelligent storage solutions. It includes understanding product models, management interfaces, and advanced features like storage tuning and data protection. Candidates will explore how to manage system operations, optimize resource usage, and apply Huawei-specific technologies for secure and high-performance storage deployment.
Topic 4	Basic Storage Technologies: This section of the exam measures the skills of a Storage Engineer and includes fundamental knowledge of storage systems. It covers key concepts such as intelligent storage architecture, RAID levels, storage networking, and widely used data protocols. The section also introduces the structure and function of SAN and NAS environments. A strong grasp of these basic technologies helps professionals support large-scale data infrastructure with efficiency and stability.

Huawei H13-624_V5.5 Certification Dump, Knowledge H13-624_V5.5 Points

To other workers who want to keep up with the time and being competent in today's world, you are also looking for some effective H13-624_V5.5 exam prep as well. Without voluminous content to remember, our H13-624_V5.5 practice materials contain what you need to know and what the exam want to test, So our H13-624_V5.5 Real Exam far transcend others in market. We never avoid our responsibility of offering help for exam candidates like you, so choosing our H13-624_V5.5 training guide means you choose success.

Huawei HCIP-Storage V5.5 Sample Questions (Q84-Q89):

NEW QUESTION # 84

The following options belong to the rules for FusionStorage software deployment: (multiple choice)

- **A. FusionStorage block, file, and object storage services are all deployed on their own physical nodes and cannot be mixed.**
- B. DSS and OMS are recommended to be deployed to virtual machines on different physical nodes. DSS needs to deploy 3 units, and OMS only needs to deploy 1 unit.
- **C. DSS and OMS are components that must be deployed. Choose to deploy FusionStorage block, file, and object services as needed.**
- D. When FusionStorage File/FusionStorageObject is provided, the first 2 nodes in the cluster serve as management nodes.

Answer: A,C

NEW QUESTION # 85

Assume a financial customer purchases a Huawei OceanStor Pacific scale-out storage system for future service deployment. Which statement is false about software installation of the storage system?

- A. During block service installation, if management nodes are deployed where compute and storage nodes are converged, the number of vCPUs on each converged compute and storage node must be greater than or equal to 20.
- **B. If wizard-based software installation is used, an engineer must manually add nodes, configure networks, and create a control cluster on DeviceManager, and then install the OceanStor Pacific series software.**
- C. To install the Distributed Parallel Client (DPC), the memory required for running the DPC software on a compute node must be greater than or equal to 20 GB.
- D. During block service installation, if converged deployment of storage and compute nodes is required, the difference between the disk quantities on any two nodes in the same storage pool cannot be greater than 2 or 30% of the disk quantity on the node having most disks.

Answer: B

Explanation:

The software installation process for Huawei OceanStor Pacific scale-out storage systems is detailed in the

HCIP-Storage V5.5 Training Material (Module 3: Scale-Out Storage Technologies). Let's evaluate each option:

- Option A: True. The material states: "For block service installation with converged compute and storage nodes, each node requires at least 20 vCPUs to support management and data processing tasks."

- Option B: True. The material confirms: "In converged deployments, the disk quantity difference between any two nodes in a storage pool must not exceed 2 or 30% of the disk count on the node with the most disks to ensure balanced performance."

- Option C: False. The material explains: "Wizard-based software installation automates node addition, network configuration, and control cluster creation via DeviceManager, reducing manual steps. Engineers do not need to perform these tasks manually before installing the OceanStor Pacific software." This makes the statement incorrect.

- Option D: True. The material notes: "DPC installation requires a minimum of 20 GB of memory on compute nodes to ensure stable operation." Thus, option C is false.

NEW QUESTION # 86

The LUN size relationship between production storage and disaster recovery storage configuration remote replication is: the capacity of the secondary LUN is greater than or equal to the capacity of the primary LUN.

- A. False
- B. True

Answer: A

NEW QUESTION # 87

A government customer has purchased several Huawei OceanStor Dorado 18000 series storage devices for service deployment, and an engineer needs to create storage pools on the storage system. However, before doing so, the engineer must configure LUNs and LUN groups, and create the mapping between the LUN groups and host groups.

- A. FALSE
- B. TRUE

Answer: A

NEW QUESTION # 88

A financial customer has purchased several Huawei OceanStor Dorado series storage devices for mission-critical service deployment. SmartMigration is configured to migrate services from a source LUN to a target LUN without interrupting host services. Which of the following statements about this feature is false?

- A. The implementation of a SmartMigration task between heterogeneous storage systems depends on the LUN takeover function provided by SmartVirtualization.
- B. When configuring this feature, you must plan the capacities of the source and target LUNs. The capacity of the target LUN must be greater than or equal to that of the source LUN.
- C. The higher the migration rate, the better the host service performance is. Therefore, the highest migration rate can be used when the host service load is heavy.
- D. When configuring this feature, you cannot use a LUN that has been mapped to an application server as the target LUN of a SmartMigration task.

Answer: C

Explanation:

The SmartMigration feature in Huawei OceanStor Dorado enables seamless data migration between LUNs, as detailed in the *HCIP-Storage V5.5 Training Material (Module 4: Storage Design and Implementation)*. Let's analyze each option:

- Option A: True. The material states: "SmartMigration between heterogeneous storage systems relies on SmartVirtualization to take over the source LUN, ensuring compatibility and seamless migration."
- Option B: True. The material confirms: "The target LUN capacity must be greater than or equal to the source LUN capacity to accommodate all data during migration."
- Option C: True. The material notes: "A LUN already mapped to an application server cannot be used as the target LUN for SmartMigration, as it would disrupt existing mappings."
- Option D: False. The material explains: "The migration rate affects system resources. Setting the highest migration rate under heavy host service load can degrade performance due to resource contention. The rate should be adjusted based on load to minimize impact." This makes the statement false, as high migration rates are not recommended during heavy loads.

Thus, option D is false.

NEW QUESTION # 89

.....

In fact, a number of qualifying exams and qualifications will improve your confidence and sense of accomplishment to some extent, so our H13-624_V5.5 learning materials can be your new target. When we get into the job, our H13-624_V5.5 learning materials

may bring you a bright career prospect. Companies need employees who can create more value for the company, but your ability to work directly proves your value. Our H13-624_V5.5 Learning Materials can help you improve your ability to work in the shortest amount of time, thereby surpassing other colleagues in your company, for more promotion opportunities and space for development. Believe it or not that up to you, our H13-624_V5.5 learning material is powerful and useful, it can solve all your stress and difficulties in reviewing the H13-624_V5.5 exams.
