

# Pass Guaranteed Quiz SAP - C\_ABAPD\_2309 - Pass-Sure SAP Certified Associate - Back-End Developer - ABAP Cloud Guide Torrent

SAP CERTIFICATION

P.S. Free 2025 SAP C\_ABAPD\_2309 dumps are available on Google Drive shared by ITExamSimulator:  
[https://drive.google.com/open?id=1B-7DcjnyxpI8xiAw\\_i9A4biQ75Ksc3JO](https://drive.google.com/open?id=1B-7DcjnyxpI8xiAw_i9A4biQ75Ksc3JO)

Our C\_ABAPD\_2309 practice questions attract users from all over the world because they really have their own charm. No product like our C\_ABAPD\_2309 study guide will seriously consider the needs of users in all aspects. From product content to system settings, we will give you what you want! Firstly, you definitely want to pass the exam for sure. Our C\_ABAPD\_2309 Exam Questions are high-effective with a high pass rate as 98% to 100%. So don't hesitate, just come and buy our C\_ABAPD\_2309 learning braindumps!

Sometimes choice is greater than important. Good choice may do more with less. If you still worry about your exam, our C\_ABAPD\_2309 braindump materials will be your right choice. Our exam braindumps materials have high pass rate. Most candidates purchase our products and will pass exam certainly. If you want to fail exam and feel depressed, our C\_ABAPD\_2309 braindump materials can help you pass exam one-shot. ITExamSimulator sells high passing-rate preparation products before the real test for candidates.

## C\_ABAPD\_2309 Sample Questions Answers | Training C\_ABAPD\_2309 Materials

Windows computers support the desktop practice test software. ITExamSimulator has a complete support team to fix issues of SAP C\_ABAPD\_2309 practice test software users. ITExamSimulator practice tests (desktop and web-based) produce score report at the end of each attempt. So, that users get awareness of their SAP Certified Associate - Back-End Developer - ABAP Cloud (C\_ABAPD\_2309) preparation status and remove their mistakes.

## SAP Certified Associate - Back-End Developer - ABAP Cloud Sample

## Questions (Q69-Q74):

### NEW QUESTION # 69

Why would you use Access Controls with CDS Views? Note: There are 2 correct answers to this question.

- A. Only the data corresponding to the user's authorization is transferred from the database to the application layer.
- B. All of the data from the data sources is loaded into your application automatically and filtered there according to the user's authorization.
- C. The system field sy-subrc is set, giving you the result of the authorization check
- D. You do not have to remember to implement AUTHORITY CHECK statements.

**Answer: A,D**

Explanation:

You would use Access Controls with CDS Views for the following reasons:

\* A. Only the data corresponding to the user's authorization is transferred from the database to the application layer. This is true because Access Controls allow you to define CDS roles that specify the authorization conditions for accessing a CDS view. The CDS roles are evaluated for every user at runtime and the system automatically adds the restrictions to the selection conditions of the CDS view.

This ensures that only the data that the user is authorized to see is read from the database and transferred to the application layer.

This improves the security and the performance of the data access<sup>1</sup>.

\* C. You do not have to remember to implement AUTHORITY CHECK statements. This is true because Access Controls provide a declarative and centralized way of defining the authorization logic for a CDS view. You do not have to write any procedural code or use the AUTHORITY CHECK statement to check the user's authorization for each data source or field. The system handles the authorization check automatically and transparently for you<sup>2</sup>.

The following reasons are not valid for using Access Controls with CDS Views:

\* B. The system field sy-subrc is set, giving you the result of the authorization check. This is false because the system field sy-subrc is not used by Access Controls. The sy-subrc field is used by the AUTHORITY CHECK statement to indicate the result of the authorization check, but Access Controls do not use this statement. Instead, Access Controls use CDS roles to filter the data according to the user's authorization<sup>2</sup>.

\* D. All of the data from the data sources is loaded into your application automatically and filtered there according to the user's authorization. This is false because Access Controls do not load all the data from the data sources into the application layer. Access Controls filter the data at the database layer, where the data resides, and only transfer the data that the user is authorized to see to the application layer. This reduces the data transfer and the memory consumption of the application layer<sup>1</sup>.

### NEW QUESTION # 70

In which products must you use the ABAP Cloud Development Model? Note: There are 2 correct answers to this question.

- A. SAP S/4HANA Cloud, public edition
- B. SAP S/4HANA on premise
- C. SAP S/4HANA Cloud, private edition
- D. SAP BTP, ABAP environment

**Answer: C,D**

Explanation:

The ABAP Cloud Development Model is the ABAP development model to build cloud-ready business apps, services, and extensions. It comes with SAP BTP and SAP S/4HANA. It works with public or private cloud, and even on-premise<sup>1</sup>. However, the complete ABAP Cloud Development Model, including the cloud-optimized ABAP language and public local SAP APIs and extension points, is available only in SAP BTP ABAP Environment and in the 2208/2022 versions of the SAP S/4HANA editions<sup>1</sup>. Therefore, you must use the ABAP Cloud Development Model in SAP BTP, ABAP environment and SAP S/4HANA Cloud, private edition. You can also use it in SAP S/4HANA on premise, but it is not mandatory. You cannot use it in SAP S/4HANA Cloud, public edition, because it does not allow custom ABAP code<sup>2</sup>. ### NEW QUESTION # 71

In a subclass `subl` you want to redefine a component of a superclass `superl`. How do you achieve this? Note:

There are 2 correct answers to this question.

- **A. You implement the redefined component in subl.**
- B. You add the clause REDEFINITION to the component in superl.
- **C. You add the clause REDEFINITION to the component in subl.**
- D. You implement the redefined component for a second time in superl.

**Answer: A,C**

Explanation:

To redefine a component of a superclass in a subclass, you need to do the following<sup>12</sup>:

\* You add the clause REDEFINITION to the component declaration in the subclass. This indicates that the component is inherited from the superclass and needs to be reimplemented in the subclass. The redefinition must happen in the same visibility section as the component declaration in the superclass.

For example, if the superclass has a public method m1, the subclass must also declare the redefined method m1 as public with the REDEFINITION clause.

\* You implement the redefined component in the subclass. This means that you provide the new logic or behavior for the component that is specific to the subclass. The redefined component in the subclass will override the original component in the superclass when the subclass object is used. For example, if the superclass has a method m1 that returns 'Hello', the subclass can redefine the method m1 to return 'Hi' instead.

You cannot do any of the following:

\* You implement the redefined component for a second time in the superclass. This is not possible, because the superclass already has an implementation for the component that is inherited by the subclass. The subclass is responsible for providing the new implementation for the redefined component, not the superclass.

\* You add the clause REDEFINITION to the component in the superclass. This is not necessary, because the superclass does not need to indicate that the component can be redefined by the subclass. The subclass is the one that needs to indicate that the component is redefined by adding the REDEFINITION clause to the component declaration in the subclass.

## NEW QUESTION # 72

Given the following code,

```
DATA gv_text1 TYPE string. "#EC_NEEDED
```

```
DATA gv_text2 TYPE string ##NEEDED.
```

What are valid statements? Note: There are 2 correct answers to this question.

- A. #EC\_NEEDED is not checked by the syntax checker.
- **B. ##NEEDED is checked by the syntax checker.**
- C. The pseudo-comment is checked by the syntax checker
- **D. The pragma is not checked by the syntax checker.**

**Answer: B,D**

Explanation:

Both statements are valid in ABAP, but they have different effects on the program.

\* ##NEEDED is a pragma that can be used to hide warnings from the ABAP compiler syntax check. It tells the check tools that a variable or a parameter is needed for further processing, even if it is not used in the current statement. For example, if you declare a variable without assigning any value to it, you can use ##NEEDED to suppress the warning about unused variables<sup>12</sup>.

\* The pragma is not checked by the syntax checker means that you can use any pragma to hide any warning from the ABAP compiler syntax check, regardless of its effect on the program logic or performance. For example, if you use ##SHADOW to hide a warning about an obscured function, you can also use it to hide a warning about an invalid character in a string<sup>12</sup>.

You cannot do any of the following:

\* #EC\_NEEDED is not checked by the syntax checker: This is not a valid statement in ABAP. There is no pseudo-comment with #EC\_NEEDED in ABAP<sup>3</sup>.

\* The pseudo-comment is checked by the syntax checker: This is false. Pseudo-comments are obsolete and should no longer be used in ABAP. They were replaced by pragmas since SAP NW 7.0 EhP2 (Enhancement Package)<sup>4</sup>.

References: 1: Pragmas - ABAP Keyword Documentation - SAP Online Help 2: [What are pragmas and pseudo comments in ABAP? | SAP Blogs - SAP Community] 3: ABAP Keyword Documentation - SAP Online Help 4: What are PRAGMAS and Pseudo comments in SAP ABAP

### NEW QUESTION # 73

What are some properties of database tables? Note: There are 2 correct answers to this question.

- A. They store information in two dimensions.
- B. They can have relationships to other tables.
- C. They may have key fields.
- D. They can have any number of key fields.

**Answer: A,B**

Explanation:

Database tables are data structures that store information in two dimensions, using rows and columns. Each row represents a record or an entity, and each column represents an attribute or a field. Database tables may have key fields, which are columns that uniquely identify each row or a subset of rows. Key fields can be used to enforce data integrity, perform efficient searches, and establish relationships to other tables. Database tables can have relationships to other tables, which are associations or links between the key fields of two or more tables. Relationships can be used to model the logical connections between different entities, join data from multiple tables, and enforce referential integrity<sup>12</sup>.

### NEW QUESTION # 74

.....

They work closely and check all SAP C\_ABAPD\_2309 exam practice test questions step by step and ensure the top standard of C\_ABAPD\_2309 exam questions all the time. So rest assured that with the C\_ABAPD\_2309 exam dumps you will get everything that you need to prepare and pass the SAP C\_ABAPD\_2309 Certification Exam with good scores. Countless SAP Certified Associate - Back-End Developer - ABAP Cloud exam candidates have passed their C\_ABAPD\_2309 exam and they all got help from real and updated SAP C\_ABAPD\_2309 exam questions. You can also be the next successful candidate for the C\_ABAPD\_2309 certification exam.

**C\_ABAPD\_2309 Sample Questions Answers:** [https://www.itexamsimulator.com/C\\_ABAPD\\_2309-brain-dumps.html](https://www.itexamsimulator.com/C_ABAPD_2309-brain-dumps.html)

Moreover, they are based on the recommended syllabus covering all the C\_ABAPD\_2309 exam objectives, In this way, you can know well about your shortcoming and strength in the C\_ABAPD\_2309 test and improve your ability before C\_ABAPD\_2309 braindumps actual test, In order to make our customer have a full knowledge of the SAP C\_ABAPD\_2309 exam test and make a systematic preparation for it, our experts are arranged to check the updated information every day, Yes, some companies also have their SAP C\_ABAPD\_2309 real questions.

Share your presentation with anyone on the C\_ABAPD\_2309 web, But most freelancers who make less than these phase out levels will likely be able to take this deduction, Moreover, they are based on the recommended syllabus covering all the C\_ABAPD\_2309 Exam Objectives.
