New SAP C_CPI_2506 Test Braindumps, C_CPI_2506 New Practice Questions

A second format is a SAP C_CPI_2506 web-based practice exam that can take for self-assessment. However, it differs from desktop-based C_CPI_2506 practice exam software as it can be taken via any browser, including Chrome, Firefox, Safari, and Opera. This SAP C_CPI_2506 web-based practice exam does not require any other plugins. It also includes all of the functionalities of desktop C_CPI_2506 software and will assist you in passing the C_CPI_2506 certification test.

SAP Certified Associate - Integration Developer Sample Questions (Q11-Q16):

NEW QUESTION # 11

Which SAP Integration Suite component delivers the Cloud Event to the "emis-s4hana-uc123" message queue?

- A. API Management
- **B. Event Mesh**
- C. Open Connector
- D. Process Integration

Answer: B

Explanation:

In SAP Integration Suite, the component responsible for delivering Cloud Events to message queues is Event Mesh.

Event Mesh handles event-driven communication and manages message queues like emis-s4hana-uc123.

Process Integration (PI/PO) is on-premise middleware, not part of Integration Suite cloud services.

API Management handles APIs, not messaging events.

Open Connectors provides connectivity to third-party SaaS apps, not queue management.

Thus, the Cloud Event is delivered to the message queue via Event Mesh.

NEW QUESTION # 12

What does the messaging model of the Apache Camel Data Model consist of?

- A. Header, body, properties
- B. Header, properties, attachment
- C. Header, Exchange ID, in-message
- **D. Header, body, attachment**

Answer: D

Explanation:

The messaging model of the Apache Camel Data Model consists of three parts: header, body, and attachment. The header contains information related to the message, such as addressing, routing, or metadata. The body contains the payload or the content of the message. The attachment contains optional data that can be attached to the message, such as files or images. The Apache Camel Data Model is used by SAP Integration Suite to process messages of any format using various components and data formats.

Reference: The Camel Data Model in a Nutshell | SAP Help Portal, Data Formats :: Apache Camel

NEW QUESTION # 13

In the Cloud Integration capability within SAP Integration Suite, which internal message format is used?

- **A. XML**
- B. JSON
- C. XSLT

Answer: A

Explanation:

In the Cloud Integration capability within SAP Integration Suite, XML is the internal message format that is used. XML stands for Extensible Markup Language and is a standard format for representing structured data. All messages that are processed by the

Cloud Integration capability are converted to XML internally and then transformed to the desired format at the outbound channel.

NEW QUESTION # 14

You configured a content modifier as follows: Action: Create | Name: ProductID | Source Type: XPath Source Value: //ProductID | Data Type: java.lang.string. After testing the content modifier, you receive an error message that contains the following fragment: "Java.lang.ClassNotFoundException: java.lang.string..." What caused the error message?

- A. Incorrect source type
- **B. Incorrect data type**
- C. Incorrect source value
- D. Incorrect name

Answer: B

Explanation:

In SAP Cloud Integration, when defining Content Modifier properties, the Java data type names are case- sensitive.

Correct type # java.lang.String

In the configuration, java.lang.string was used (lowercase "s"), which causes a ClassNotFoundException, since Java cannot find the class.

Other options are correct in form:

Source Type = XPath # Valid.

Source Value = //ProductID # Valid XPath.

Name = ProductID # Valid.

Thus, the error occurred because of incorrect data type specification.

NEW QUESTION # 15

You want to publish a new API product to the API business hub enter-prise. What is a requirement?

- A. At least one deployed API Provider
- **B. At least one deployed API Proxy**
- C. At least two deployed API Proxies
- D. At least two deployed API Providers

Answer: B

Explanation:

To publish a new API product to the API business hub enterprise, you need at least one deployed API proxy as a requirement. An API proxy is an API that acts as an intermediary between an API provider and an API consumer. It can be used to add security, monitoring, caching, transformation, and other features to the API provider. An API product is a bundle of one or more API proxies that are grouped together for a specific business scenario or use case. To create an API product, you need to select one or more deployed API proxies from your API portal and provide some metadata, such as name, title, description, quota limits, and so on. Then you can publish your API product to the API business hub enterprise, which is a centralized platform for discovering, consuming, and managing APIs. Reference: Create an API Proxy | SAP Help Portal, Create a Product | SAP Help Portal
