NEW QUESTION # 18
During the configuration of a new custom field, after it's been saved but before the field has been published, you realize that you set the wrong field type. What is the next step you should take to resolve the issue?

- A. Mark the field as Hidden, and create a new field with a slightly different name and the intended field type
- B. Delete the field and create a new field with the same name and the intended field type
- C. Change the field type by selecting the intended type in the dropdown and Save
- D. Clear and recreate the field with the same field name and the intended field type

Answer: B

Explanation:
Once a custom field has been saved,its field type cannot be changed-even if the field has not yet been published. Thecorrect approach is to delete the incorrect fieldandcreate a new one with the intended type, optionally using the same nameto maintain naming consistency. Clearing or hiding the field does not solve the issue, and the system does not allow type changes via the UI once saved. This approach is standard in SAP Ariba field management to avoid data integrity issues.
