## OGBA-101 Vce Format - Exams OGBA-101 Torrent

PDF design has versatile and printable material for The Open Group OGBA-101 certification, so you all can breeze through the The Open Group OGBA-101 exam without any problem. You can get to the PDF concentrate on material from workstations, tablets, and cell phones for the readiness of TOGAF Business Architecture Foundation Exam (OGBA-101) exam

## The Open Group TOGAF Business Architecture Foundation Exam Sample Questions (Q30-Q35):

### NEW QUESTION # 30

Consider the following extract of a model showing relationships between Business Architecture concepts:

- A. Enables
- **B. Consists of**
- C. Creates
- D. Receives

**Answer: B**

Explanation:

In the context of TOGAF and Business Architecture, the diagram depicts the relationship between a Value Stream, Value Stage, and Value.

Value Stream: Represents the end-to-end set of activities that create and deliver value to a stakeholder.

Value Stage: A distinct step or phase within the Value Stream.

Value: The benefit delivered to the stakeholder.

The relationship "X" indicates that a Value Stream is composed of multiple Value Stages.

Think of it like a journey (Value Stream) with multiple stops along the way (Value Stages). Each stage contributes to the overall value delivered at the end of the journey.

### NEW QUESTION # 31

Which of the following are used for structuring a business capability map?

- A. Aligning, Layering
- B. Stratification, Leveling
- C. Mapping, Sorting
- D. Categorizing, Grouping

**Answer: D**

Explanation:

A Business Capability Map is structured by categorizing and grouping capabilities into high-level clusters that align with business objectives. This approach aligns with TOGAF principles for clarity and simplification in business capability representation, enabling a coherent view of business abilities.

Reference:

Business capability maps provide a structured view of what an organization does to achieve its objectives. To create a clear and understandable map, capabilities need to be organized effectively. Categorizing and grouping are the primary methods used for this purpose:

Categorizing: This involves classifying capabilities into different types or categories based on their characteristics or purpose.

Common categories include:

Core capabilities: Essential for the organization's core business.

Supporting capabilities: Enable or enhance core capabilities.

Customer-facing capabilities: Directly interact with customers.

Operational capabilities: Focus on internal operations.

Grouping: This involves grouping related capabilities together to create a hierarchical structure. This helps to visualize relationships between capabilities and understand how they contribute to broader business functions

### NEW QUESTION # 32

In which part of a business scenario are business capabilities and value streams modelled?

- A. When identifying the business and technology environment
- B. When identifying, documenting and ranking the problem
- C. When identifying the human actors
- D. When identifying and documenting desired outcomes

**Answer: D**

Explanation:

In the context of TOGAF's business scenarios, business capabilities and value streams are typically modeled during the phase of identifying and documenting the desired outcomes. This is because desired outcomes are directly related to what the business intends to achieve, and therefore, it makes sense to model the capabilities (what the business can do) and the value streams (the series of steps the business undertakes to create value) at this stage. This helps in understanding the required changes or enhancements to business capabilities and processes to achieve those outcomes.

### NEW QUESTION # 33

Which of the following best describes "value" in the context of Business Architecture?

- A. A numerical quantity assigned to something.
- B. The monetary worth of something.
- C. The market price of something.
- D. The benefit of something.

**Answer: D**

Explanation:

In Business Architecture, "value" refers to the benefit provided to stakeholders, aligning with TOGAF's goal to capture and deliver value in business processes and capabilities. Business value is viewed as outcomes or improvements that meet stakeholder needs, rather than purely financial or numerical metrics.

Reference:

In the context of Business Architecture, "value" is broadly defined as the benefit that something provides to stakeholders. This benefit can take many forms, including:

Financial value: Increased revenue, reduced costs, improved profitability.

Customer value: Enhanced customer satisfaction, improved customer experience, increased customer loyalty.

Operational value: Increased efficiency, improved productivity, reduced risk.

Social value: Positive impact on society, environmental sustainability, ethical practices.

The key point is that value is subjective and depends on the perspective of the stakeholder. What is valuable to one stakeholder may not be as valuable to another. Therefore, understanding stakeholder values is crucial for effective business architecture.

### NEW QUESTION # 34

Which of the following best describes where business scenarios are used in the TOGAF ADM?

- A. They are used as part of a business transformation readiness assessment in Phase E.
- B. They are used to resolve impacts across the Architecture Landscape in Phases B, C, and D.
- **C. They are used in the Preliminary Phase, Phase A, and Phase B.**
- D. They are used as part of the lessons learned activity at the end of Phase F.

**Answer: C**

Explanation:

According to the TOGAF Standard, business scenarios are an important technique that may be used at various stages of the enterprise architecture, principally the Architecture Vision and the Business Architecture, but in other architecture domains as well, if required, to derive the characteristics of the architecture directly from the high-level requirements of the business<sup>1</sup>. The Architecture Vision is developed in Phase A, and the Business Architecture is developed in Phase B. The Preliminary Phase is also a stage where business scenarios can be used to help identify and understand business needs<sup>2</sup>.

Business scenarios are a tool used within TOGAF to help identify and understand the business requirements and to drive the creation of the enterprise's architecture. They are used in the Preliminary Phase to understand the organizational context, Phase A to develop the Architecture Vision, and Phase B to derive the Business Architecture based on the stakeholder's requirements and the business strategy.
