HPE Storage Solutions Sample Questions (Q284-Q289):

NEW QUESTION # 284

A solution architect is sizing the required capacity for an HPE Alletra 9000. Customer requirements include:

- * 100TB base volumes
- * 168 snapshots a week
- * 15% daily change rate

How much capacity is needed for snapshots after one week?

- **A. 105TB**
- B. 700TB
- C. 15TB
- D. 1680TB

Answer: A

Explanation:

To calculate the required capacity for snapshots after one week for an HPE Alletra 9000, we start by understanding the customer's requirements:

- * Base volume size: 100TB
- * Snapshots: 168 snapshots per week
- * Daily change rate: 15%

The snapshot capacity requirement can be calculated by taking 15% of the base volume size per day, and multiplying it by the number of days (7 days in a week) and the number of snapshots per day.

Daily change: 15% of 100TB = 15TB
Total change over a week: 15TB * 7 days = 105TB
Thus, the capacity needed for snapshots after one week is 105TB.
