The pass rate is 98% for MuleSoft-Integration-Associate exam bootcamp, if you choose us, we can ensure you that you can pass the exam just one time. In addition, we offer you free demo to have a try before buying, so that you can know what the complete version is like. In order to strengthen your confidence for MuleSoft-Integration-Associate training materials, we are pass guarantee and money back guarantee, and we will refund your money if you fail to pass the exam. We have a professional service team and they have the professional knowledge for MuleSoft-Integration-Associate Exam Bootcamp, if you have any questions, you can contact with them.

A free trial service is provided for all customers by our MuleSoft-Integration-Associate study quiz, whose purpose is to allow customers to understand our products in depth before purchase. Many students often complain that they cannot purchase counseling materials suitable for themselves. A lot of that stuff was thrown away as soon as it came back. However, you will definitely not encounter such a problem when you purchase MuleSoft-Integration-Associate Preparation questions. We have free demos of the MuleSoft-Integration-Associate exam questions to download.

## MuleSoft-Integration-Associate Certification Practice | New MuleSoft-Integration-Associate Test Questions

Three versions of MuleSoft-Integration-Associate exam guide are available on our test platform, including PDF version, PC version and APP online version. As a consequence, you are able to study the online test engine of MuleSoft-Integration-Associate study materials by your cellphone or computer, and you can even study MuleSoft-Integration-Associate Actual Exam at your home, company or on the subway whether you are a rookie or a veteran, you can make full use of your fragmentation time in a highly-efficient way to study with our MuleSoft-Integration-Associate exam questions and pass the MuleSoft-Integration-Associate exam.

## Salesforce Certified MuleSoft Integration Associate Exam Sample Questions (Q41-Q46):

### NEW QUESTION # 41

A key CI/CD capability of any enterprise solution is a testing framework to write and run repeatable tests Which component of Anypoint Platform provides the test automation capabilities for customers to use in their pipelines?

- A. Exchange Mocking Service
- B. Anypoint CLI
- C. Mule Maven Plugin
- **D. MUnit**

**Answer: D**

Explanation:

A robust CI/CD pipeline requires automated testing to ensure code quality and functionality. MuleSoft's MUnit provides this capability for Mule applications. Here's a detailed explanation:

\* MUnit:

\* Purpose: MUnit is MuleSoft's testing framework for creating automated tests for Mule applications.

\* Capabilities:

\* Unit Tests: Write unit tests to validate the behavior of individual components and flows.

\* Integration Tests: Test interactions between multiple components and external systems.

\* CI/CD Integration:

\* Automation: Integrate MUnit tests into CI/CD pipelines using tools like Jenkins, GitLab CI, or Bamboo.

\* Repeatable Tests: Ensures that tests are executed consistently with each code change, catching issues early in the development process.

\* Pipeline Execution:

\* Build and Test: The pipeline automatically runs MUnit tests during the build process, providing immediate feedback on the code changes.

\* Quality Assurance: Helps maintain high code quality and reduces the risk of defects in production.

References

\* MuleSoft Documentation: MUnit

\* CI/CD Best Practices: MuleSoft CI/CD

## NEW QUESTION # 42

Which AnypointPlatform component helps integration developers discover and share reusable APIs, connectors and templates'?

- A. Design Center
- B. API Manager
- C. Anypoint Studio
- **D. Anypoint Exchange**

**Answer: D**

Explanation:

Anypoint Exchange is a component of the Anypoint Platform that helps integration developers discover and share reusable APIs, connectors, and templates. Here's a detailed explanation:

\* Anypoint Exchange:

\* Purpose: Acts as a centralized repository for discovering, sharing, and reusing APIs, connectors, templates, and other integration assets.

\* Discovery: Developers can search for and find existing APIs, connectors, and templates within the organization or from the wider MuleSoft community.

\* Sharing: Allows developers to publish their APIs and assets, making them available for reuse by others in the organization.

\* Benefits:

\* Reusability: Promotes reuse of existing assets, reducing development time and effort.

\* Collaboration: Facilitates collaboration and sharing of best practices among development teams.

\* Documentation: Provides comprehensive documentation and usage examples for each asset.

References

\* MuleSoft Documentation: Anypoint Exchange

\* Anypoint Platform Features: Discover and Share with Exchange

## NEW QUESTION # 43

An organization's IT team follows an API-led connectivity approach and must use Anypoint Platform to implement a System API that securely accesses customer data. The organization uses Salesforce as the system of record for all customer data and its most important objective is to reduce the overall development time to release the System API. The team's integration architect has identified four different approaches to access the customer data from within the implementation of the System API by using different

Anypoint Connectors that all meet the technical requirements of the project Which approach should the team choose to meet the organization's objective to reduce the time to develop and release the System API?

- **A. Use the Anypoint Connector for Salesforce to connect to the Salesforce APIs to directly access the customer data**
- B. Use the Anypoint Connector for Database to connect to a MySQL database to access a copy of the customer data
- C. Use the Anypoint Connector for HTTP to connect to the Salesforce APIs to directly access the customer data
- D. Use the Anypoint Connector for FTP to download a file containing a recent near-real time extract of the customer data

**Answer: A**

Explanation:

In an API-led connectivity approach, using the most efficient method to access system data can significantly reduce development time. Here's why using the Anypoint Connector for Salesforce is the best approach:

\* Direct Access:

\* Salesforce APIs: The Anypoint Connector for Salesforce provides direct access to Salesforce APIs, allowing the System API to retrieve customer data efficiently and securely.

\* No Middleware: Directly accessing Salesforce eliminates the need for intermediary steps, reducing complexity and potential points of failure.

\* Reduced Development Time:

\* Out-of-the-Box Functionality: The connector offers pre-built operations and functionalities tailored for Salesforce, speeding up development.

\* Configuration Over Coding: Using the connector involves minimal configuration compared to coding custom integration logic, leading to faster implementation.

\* Security:

\* Built-in Security: The connector handles authentication and authorization, ensuring secure data access in line with Salesforce security protocols.

\* Alternative Approaches:

\* HTTP Connector: While functional, it requires more custom handling for Salesforce API interactions and error management.

\* Database Connector: Accessing a database copy of Salesforce data may involve data synchronization challenges and does not provide real-time data.

\* FTP Connector: Using FTP for data extracts is less efficient and introduces delays in accessing up-to-date information.

\* MuleSoft Documentation: Salesforce Connector

\* API-led Connectivity: MuleSoft API-led Connectivity

## NEW QUESTION # 44

A platform architect includes both an API gateway and a service mesh in the architecture of a distributed application for communication management.

Which type of communication management does a service mesh typically perform in this architecture?

- A. Between application services and the firewall
- B. Between the application and external API clients
- C. Between the application and external API implementations
- **D. Between services within the application**

**Answer: D**

Explanation:

A service mesh is typically used to manage communication between microservices within a distributed application. Here's a detailed explanation:

\* Service Mesh:

\* Definition: A service mesh is a dedicated infrastructure layer that manages service-to-service communication within a microservices architecture.

\* Features: Provides features such as load balancing, service discovery, traffic management, and security (e.g., mutual TLS).

\* Intra-Application Communication:

\* Focus: It focuses on internal communication between microservices, ensuring reliability, security, and observability of inter-service communications.

\* Management: Handles retries, circuit breaking, and service-to-service authentication transparently.

\* API Gateway:

\* Complementary Role: While a service mesh manages internal microservice communications, an API gateway manages external

client requests and provides a single entry point for external API clients.

#### NEW QUESTION # 45

An organization is not meeting its growth and innovation objectives because IT cannot deliver projects fast enough to keep up with the pace of change required by the business.

According to MuleSoft's IT delivery and operating model which step should the organization take to solve this problem?

- A. Switch from a design-first to a code-first approach for IT development
- B. Hire more IT developers, architects, and project managers to increase IT delivery
- **C. Adopt a new approach that decouples core IT projects from the innovation that happens within each line of business**
- D. Modify IT governance and security controls so that line of business developers can have direct access to the organization's systems of record

**Answer: C**

Explanation:

MuleSoft's IT delivery and operating model suggests modernizing IT practices to better support business growth and innovation.

Here's a detailed explanation:

\* Decoupling Core IT Projects:

\* Definition: Decoupling involves separating the core IT systems and projects from the innovative and experimental projects conducted by various lines of business.

\* Benefits:

\* Agility: Enables lines of business to innovate rapidly without being held back by the constraints of core IT systems.

\* Focus: Allows core IT to focus on maintaining and enhancing critical systems while business units can experiment and deploy new solutions more quickly.

\* Implementation:

\* API-led Connectivity: By using an API-led connectivity approach, core IT can expose reusable APIs and services that business units can leverage for their innovation efforts.

\* Governance and Security: Ensuring that proper governance and security measures are in place to protect core systems while allowing flexibility for innovation.

\* Outcome:

\* Faster Delivery: Speeds up the delivery of new features and solutions, aligning with business needs and market demands.

\* Enhanced Collaboration: Facilitates better collaboration between IT and business units, driving overall organizational growth.
