

Pass Guaranteed SAP - C_SEC_2405 Accurate Latest Test Dumps

We give customers the privileges to check the content of our C_SEC_2405 real dumps before placing orders. Such high quality and low price traits of our C_SEC_2405 guide materials make exam candidates reassured. The free demos of C_SEC_2405 study quiz include a small part of the real questions and they exemplify the basic arrangement of our C_SEC_2405 real test. They also convey an atmosphere of high quality and prudent attitude we make.

SAP C_SEC_2405 Exam Syllabus Topics:

Topic	Details
Topic 1	• Infrastructure Security and Authentication: This section of the exam measures the skills of SAP IT Professionals and covers infrastructure security measures and authentication methods used in SAP environments. It emphasizes protecting systems from unauthorized access and ensuring secure user authentication.
Topic 2	• Governance, Compliance, and Cybersecurity: This section of the exam measures the skills of compliance officers and covers the principles of governance, compliance, and cybersecurity of SAP systems. It includes understanding regulatory requirements and best practices for maintaining security. A critical skill evaluated is ensuring organizational compliance with relevant laws and policies.
Topic 3	• Public Cloud User and Role Management: This section of the exam measures the skills of SAP IT cloud Professionals and covers managing users and roles in public cloud environments for SAP applications.
Topic 4	• SAP Fiori Authorizations and SAP S • 4HANA: This section of the exam measures the skills of SAP Developers and covers authorization management specific to SAP Fiori applications within SAP S • 4HANA. It emphasizes configuring authorizations for Fiori apps to ensure appropriate access levels. A key skill assessed is understanding Fiori authorization concepts to enhance user experience.

Featured SAP certification C_SEC_2405 exam test questions and answers

Our products are officially certified, and our C_SEC_2405 exam materials are definitely the most authoritative product in the industry. In order to ensure the authority of our C_SEC_2405 practice prep, our company has really taken many measures. We have hired the most professional experts to compile the content of the C_SEC_2405 study braindumps, and design the displays. So our C_SEC_2405 learning questions can stand the test of the market.

SAP Certified Associate - Security Administrator Sample Questions (Q37-Q42):

NEW QUESTION # 37

In the administration console of the Cloud Identity Services, which system property types can you add? Note: There are 2 correct answers to this question.

- A. Internal
- B. Credential
- C. Default
- D. Standard

Answer: B,D

Explanation:

In the administration console of SAP Cloud Identity Services, administrators can add system property types to configure system behavior and integration settings. The Credential property type allows the definition of authentication credentials, such as usernames and passwords, for connecting to external systems or identity providers, ensuring secure communication. The Standard property type is used to configure general system settings, such as URLs, timeouts, or other operational parameters, that are essential for system functionality.

These property types enable flexible and secure management of identity services. Internal and Default are not recognized property types in this context; Internal may refer to system-internal configurations not exposed to administrators, and Default is not a specific property type but rather a concept for preconfigured values. This structure supports robust identity management across SAP's cloud ecosystem.

NEW QUESTION # 38

To connect to data sources that are NOT all based on OData, which of the following options does SAP recommend you use?

- A. SAP Integration Suite
- B. Cloud connector
- C. OData Provisioning service
- D. SAP Process Integration

Answer: A

Explanation:

For connecting to data sources that are not exclusively based on OData, SAP recommends using the SAP Integration Suite. This comprehensive platform supports a wide range of integration scenarios, including OData, REST, SOAP, and other protocols, making it ideal for connecting diverse data sources, whether on-premise or cloud-based. The SAP Integration Suite provides tools for data mapping, transformation, and orchestration, ensuring seamless and secure data exchange across heterogeneous systems. In contrast, the OData Provisioning service is specifically designed for OData-based integrations, limiting its applicability to non-OData sources. The Cloud connector facilitates secure connectivity between SAP BTP and on-premise systems but is not a complete integration solution. SAP Process Integration, while used for integration in older SAP landscapes, lacks the flexibility and cloud-native capabilities of the SAP Integration Suite. By leveraging the SAP Integration Suite, organizations can achieve robust, scalable, and secure integrations, aligning with SAP's modern integration strategy for complex, multi-protocol environments.

NEW QUESTION # 39

In S/4HANA on-premise, which of the following combinations is required to grant a business user access to data from a Core Data

Services (CDS) view using the standard ABAP authorization concept and authorization object S_RS_AUTH?

- A. *A CDS role with access conditions based on authorization object S_RS_AUTH
*APFCG role containing the CDS role and access conditions based up authorization object S_RS_AUTH
*Assignment of the PFCG role and the CDS role to the business user.
- B. *ACDS role with access conditions based on authorization object S_RS_AUTH
*A PFCG role with authorization for object S_RS_AUTH
*Assignment of the PFCG role to the business user. D.
- C. *A CDS role with access conditions based on authorization object S_RS_AUTH
*APFCG role containing the CDS role and access conditions based up authorization object S_RS_AUTH
*Assignment of the PFCG role to the business user. C.
- D. *A CDS role with access conditions based on authorization object S_RS_AUTH,
*APFCG role with authorization for object S_RS_AUTH and assignment of the PFCG role
*The CDS role to the business user.

Answer: A

Explanation:

* Context: Granting access to Core Data Services (CDS) views in S/4HANA requires both ABAP authorization concepts and CDS-specific access control.

* Solution Explanation:

* CDS Role: Defines access conditions using the S_RS_AUTH object.

* PFCG Role: Contains the S_RS_AUTH authorization and references the CDS role.

* User Assignment: Both roles must be assigned to the user to enable seamless access.

NEW QUESTION # 40

Which user type in SAP S/4HANA Cloud Public Edition is used for API access, system integration, and scenarios where automated data exchange is required?

- A. SAP Technical User
- B. SAP Administrative User
- C. SAP Support User
- D. SAP Communication User

Answer: D

Explanation:

In SAP S/4HANA Cloud Public Edition, the SAP Communication User type is used for:

* API Access:

* Facilitates secure communication between SAP systems and external applications.

* System Integration:

* Used in scenarios requiring automated data exchange, such as integrations with middleware or third-party systems.
