High Hit Rate Reliable C-TS414-2023 Braindumps Ebook – Find Shortcut to

Pass C-TS414-2023 Exam

PracticeVCE follows its motto to facilitate its consumer by providing them the material to qualify for the SAP C-TS414-2023 certification exam with excellence. Therefore, it materializes its mission by giving them free of cost SAP C-TS414-2023 demo of the dumps. This practical step taken by the PracticeVCE will enable its users to assess the quality of the SAP C-TS414-2023 dumps.

SAP C-TS414-2023 Exam Syllabus Topics:

Topic	Details
Topic 1	Managing Clean Core: It focuses on the application of core principles to ERP for enhancing business process agility.
Topic 2	Quality Management in Manufacturing: This topic describes the processes related to implementing QM in Manufacturing.
Topic 3	Quality Management in Sales and Distribution: The topic describes the integration of QM with Sales and Distribution.

SAP Certified Associate - SAP S/4HANA Cloud Private Edition, Quality Management Sample Questions (Q78-Q83):

NEW QUESTION # 78

To which of the following quality management basic data can you assign documents from the document management system (DMS)?

Note: There are 2 correct answers to this question.

- A. Inspection methods
- B. Codes from code groups
- C. Sampling procedures
- D. Master inspection characteristics

Answer: A,D

Explanation:

The Document Management System (DMS) in SAP S/4HANA allows users to link documents (e.g., PDFs, drawings, or instructions) to various objects to provide additional context or instructions. In Quality Management, certain basic data objects support this integration natively:

* Inspection Methods (A): Inspection methods define how an inspection is performed (e.g., a test procedure). You can assign DMS documents to inspection methods to provide detailed instructions or reference materials (e.g., a calibration guide). This is configured in the inspection method master data (transaction QK01/QK02) where a document link field is available.

* Master Inspection Characteristics (D): Master inspection characteristics (MICs) define what is being inspected (e.g., length, weight). DMS documents can be assigned to MICs to include specifications, diagrams, or tolerances directly in the master data (transaction QS21/QS23). This is a standard feature to enhance inspection planning and execution.

* Codes from Code Groups (B): Codes and code groups are used for qualitative valuations (e.g., defect types). They do not have a direct field for DMS document assignment in their master data (transaction QS41/QS51), making this option incorrect.

* Sampling Procedures (C): Sampling procedures determine how samples are drawn (e.g., fixed sample size). While critical to inspection planning, they do not support direct DMS document assignment in standard SAP configuration (transaction QDV1/QDV2).

Thus, the correct answers are "Inspection methods" and "Master inspection characteristics," as both support DMS integration without additional customization. References: SAP Help Portal - "Document Management in QM"; SAP S/4HANA QM Configuration Guide - "Basic Data for Quality Management".

NEW QUESTION # 79

The receipt of a quality certificate should be recorded independently from the goods receipt. What is the necessary setting to fulfill this requirement?

- A. Indicator for enhanced certificate processing in the certificate type

- B. Assignment of a status profile in the certificate profiles
- **C. Control of certificate receipt in the quality info record: Procurement**
- D. Assignment of a status profile in the certificate type

Answer: C

Explanation:

To record quality certificate receipt independently from goods receipt (GR) in SAP S/4HANA QM, the system must decouple these processes:

* Control of Certificate Receipt in the Quality Info Record: Procurement (B): In the quality info record (transaction QI01), the "Certificate Control" settings (e.g., "Certificate Required" and "Check at GR" unchecked) allow certificate receipt to be recorded separately (e.g., via transaction QC55) before or after GR. This is the standard setting to achieve independence, ensuring the GR posts to blocked stock or proceeds without certificate enforcement at that step (SPRO > QM > Quality Certificates > Procurement).

* Assignment of a Status Profile in the Certificate Profiles (A): Certificate profiles (transaction QC01) define outgoing certificates, not incoming certificate receipt processes.

* Indicator for Enhanced Certificate Processing in the Certificate Type (C): The certificate type (SPRO > QM > Quality Certificates > Define Certificate Types) has an "Enhanced Processing" indicator, but it relates to certificate creation, not independent receipt recording.

* Assignment of a Status Profile in the Certificate Type (D): Status profiles in certificate types manage certificate statuses, not GR independence.

Thus, "Control of certificate receipt in the quality info record: Procurement" is the correct answer. References:

SAP Help Portal - "Certificate Receipt in Procurement"; SAP S/4HANA QM Customizing Guide - "Quality Certificates".

NEW QUESTION # 80

The sample-drawing procedure contains one or more sample-drawing items. Which information can be found in the sample-drawing item? Note: There are 2 correct answers to this question.

- A. Sample drawing based on number of containers
- **B. Sample categories**
- C. Confirmation of sample drawing
- **D. Number of samples**

Answer: B,D

NEW QUESTION # 81

The Customer info record: SD defines inspection requirements. For which specific combination can you maintain this info record?

Note: There are 2 correct answers to this question.

- **A. Customer, Material, and Sales Organization**
- B. Customer, Material, and Division
- C. Customer, Material, and Distribution Channel
- **D. Customer and Sales Organization**

Answer: A,D

Explanation:

The quality info record: SD (transaction QVDM) specifies QM requirements for outbound deliveries:

* Customer and Sales Organization (A): This combination allows generic inspection settings for a customer across a sales organization, a valid standard option.

* Customer, Material, and Sales Organization (B): This is the most specific combination, enabling material-specific inspection requirements for a customer within a sales org (SPRO > QM > Quality Inspection > Quality Info Record: SD).

* Customer, Material, and Division (C): Division isn't a key field for the SD info record in standard SAP.

* Customer, Material, and Distribution Channel (D): Distribution channel isn't part of the key; sales org is used instead.

Thus, "A" and "B" are the correct answers. References: SAP Help Portal - "Quality Info Record: SD"; SAP S

/4HANA QM User Guide - "SD Quality Management".

NEW QUESTION # 82

The catalog profile contains a subset of code groups and codes from different catalog types. Where can you assign the catalog profile? Note: There are 3 correct answers to this question.

- A. In the customizing settings for the inspection type
- B. In the master inspection characteristic
- C. In the customizing settings for the report type
- D. In the customizing settings for the notification type
- E. In the quality management view of the material master

Answer: A,D,E

Explanation:

A catalog profile in SAP S/4HANA QM defines a collection of code groups and codes from various catalog types (e.g., defects, usage decisions) for use in quality processes. It can be assigned at multiple levels:

* In the Quality Management View of the Material Master (A): The catalog profile is assigned in the QM view of the material master (transaction MM01/MM02, field QMAT-PROF) at the plant level. This links it to inspection lots for that material, controlling defect recording or UD codes.

* In the Customizing Settings for the Notification Type (B): In Customizing (SPRO > Quality Management > Quality Notifications > Notification Creation > Define Notification Types), you can assign a catalog profile to a notification type (e.g., Q1 for customer complaints). This determines the codes available during notification processing.

* In the Customizing Settings for the Inspection Type (C): In Customizing (SPRO > Quality Management > Quality Inspection > Inspection Lot Creation > Maintain Inspection Types), a catalog profile can be linked to an inspection type (e.g., 01 for goods receipt). This governs the codes used in inspection lots of that type.

* In the Master Inspection Characteristic (D): MICs (transaction QS21) use individual code groups or selected sets, not catalog profiles directly.

* In the Customizing Settings for the Report Type (E): Report types (used in defect recording layouts) reference catalog profiles indirectly via other objects, not as a direct assignment.

Thus, the correct answers are "A, B, C," as these are the standard assignment points. References: SAP Help Portal - "Catalog Profiles in QM"; SAP S/4HANA QM Customizing Guide - "Notification and Inspection Types".

NEW QUESTION # 83

.....

If you want to make progress and mark your name in your circumstances, you should never boggle at difficulties. As far as we know, many customers are depressed by the exam ahead of them, afraid of they may fail it unexpectedly. Our C-TS414-2023 exam torrents can pacify your worries and even help you successfully pass it. The shortage of necessary knowledge of the exam may make you waver, while the abundance of our C-TS414-2023 Study Materials can boost your confidence increasingly.
