1. Cloud Computing - ANSWER ✓ The on-demand delivery of IT resources over the Internet with pay-as-you-go pricing.
2. Cloud Deployment Model: Cloud - ANSWER ✓ Fully deployed in the cloud; all parts of the application run on AWS.
3. Cloud Deployment Model: Hybrid - ANSWER ✓ Connects on-premises infrastructure to cloud infrastructure.
4. Cloud Deployment Model: On-Premises (Private Cloud) - ANSWER ✓ Uses virtualization and resource management tools in a company's own data center; not true cloud computing.
5. Benefit of Cloud: Trade CapEx for OpEx - ANSWER ✓ Avoids large upfront investments in hardware (Capital Expense) and pays only for what you use (Operational Expense).
6. Benefit of Cloud: Economies of Scale - ANSWER ✓ AWS's massive scale allows them to offer lower prices than if a company ran its own data center.
7. Benefit of Cloud: Stop Guessing Capacity - ANSWER ✓ You can scale resources up or down automatically, so you don't have to predict usage.
8. Benefit of Cloud: Increase Speed and Agility - ANSWER ✓ Resources are available with a few clicks, reducing the time to make them available to developers from weeks to minutes.

To make preparation easier for you, Prep4sureGuide has created an Cloud-Deployment-and-Operations PDF format. This format follows the current content of the WGU Cloud-Deployment-and-Operations real certification exam. The Cloud-Deployment-and-Operations dumps PDF is suitable for all smart devices making it portable. As a result, there are no place and time limits on your ability to go through WGU Cloud-Deployment-and-Operations Real Exam Questions pdf.

WGU Cloud Deployment and Operations Sample Questions (Q32-Q37):

NEW QUESTION # 32

(Media files are stored in an S3 bucket in region A. Demand for the files from region B has increased. Region B is suffering from some latency issues due to geographical location. Which type of replication will reduce the latency in region B?)

- A. S3 Versioning
- **B. Cross-Region**
- C. Same-Region
- D. S3 Batch

Answer: B

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

To reduce latency in region B due to increased demand for media files stored in region A, cross-region replication (CRR) should be used. CRR replicates objects to an S3 bucket in another region (e.g., region B), allowing users to access files from a closer location, thus minimizing latency. The WGU Cloud Deployment and Operations Study Guide (Section 2.2, S3 Replication) states, "Cross-Region Replication in S3 copies objects to a destination bucket in a different region, reducing latency by enabling access to data from the nearest region, such as region B in this case." S3 Batch, S3 Versioning, and Same-Region replication do not address cross-region latency.

NEW QUESTION # 33

(What is the role of a patch baseline in Patch Manager?)

- A. Notifies Config of any patch updates that need to be performed
- B. Installs all patch updates as they become available by default
- C. Assigns an IAM role for services that can auto-approve patches upon release
- **D. Defines patches that should and should not be installed on EC2 instances**

Answer: D

Explanation:

A patch baseline in Patch Manager defines the patches that should and should not be installed on EC2 instances, specifying approval rules for security updates, other updates, and exclusions. This ensures controlled and compliant patching. The WGU Cloud Deployment and Operations Study Guide (Section 5.2, Patch Manager) states, "A patch baseline specifies which patches are approved for installation and which are excluded, allowing customization of patch deployment (e.g., approving only critical security updates)." Options A, B, and D misrepresent the baseline's role, as it does not auto-install, assign IAM roles, or notify Config directly.

NEW QUESTION # 34

(An organization uses CloudFormation to deploy AWS infrastructure. The templates are built in JSON and deploy EC2 instances across multiple regions. Which solution should be used to set values in the template based on region-specific AMI IDs?)

- A. WaitCondition
- B. Resources
- **C. Mappings**
- D. Outputs

Answer: C

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

The Mappings section in a CloudFormation template should be used to set values based on region-specific AMI IDs. Mappings allow the template to define a lookup table that associates regions with corresponding AMI IDs, enabling dynamic selection during stack creation across multiple regions. The WGU Cloud Deployment and Operations Study Guide (Section 5.3, CloudFormation Mappings) states, "The Mappings section enables region-specific configurations, such as mapping AMI IDs to regions (e.g., 'us-east-1': 'ami-

123456'), ensuring the correct AMI is used based on the deployment region." Outputs, WaitCondition, and Resources do not provide this mapping functionality.

NEW QUESTION # 35

(An endpoint is not responding to a request based on the failure threshold provided. What does Route 53 do once it considers the endpoint unhealthy?)

- **A. Terminates the connection attempt**
- B. Notifies CloudWatch
- C. Sends out an SNS notification
- D. Enables SQS

Answer: A

Explanation:

When Amazon Route 53 determines an endpoint is unhealthy based on a failure threshold (e.g., via health checks), it terminates the connection attempt to that endpoint and routes traffic to a healthy alternative, if available. This behavior ensures high availability using routing policies like failover or latency-based routing.

The WGU Cloud Deployment and Operations Study Guide (Section 3.1, Route 53 Health Checks) states,

"Route 53 stops routing traffic to an unhealthy endpoint by terminating connection attempts once the health check failure threshold is exceeded, redirecting to a healthy resource." Options A, C, and D are not direct actions taken by Route 53 in this scenario.

NEW QUESTION # 36

(Which AWS monitoring feature is used to process events using AWS Lambda?)

- A. Targets
- B. Logs
- C. Metrics
- **D. Rules**

Answer: D

Explanation:

The AWS monitoring feature used to process events with AWS Lambda is CloudWatch Events, specifically through the use of rules. Rules define the events to monitor (e.g., based on event patterns) and specify targets like AWS Lambda functions to process those events. The WGU Cloud Deployment and Operations Study Guide (Section 4.3, CloudWatch Events) explains that rules are the core component for event-driven architectures, enabling automation by linking events to Lambda for processing. Metrics, targets, and logs are related but not the primary feature for this function.
