NEW QUESTION # 67
Which of the following is NOT a typical IT constraint?

- A. Security assessments
- B. Development delays
- C. Bureaucratic processes
- D. Loosely coupled architectures

Answer: D

Explanation:
Loosely coupled architectures are not typical IT constraints; in fact, they are often a solution to constraints.
Typical IT constraints include:
* Security assessments (slow approvals)
* Bureaucratic processes (excessive paperwork or approvals)
* Development delays (resource or tool bottlenecks)
Extract-style reference:
"Loosely coupled architectures enable teams to work independently, reducing constraints imposed by tightly integrated systems."
-Accelerate: The Science of Lean Software and DevOps
DevOps Foundation v3.6 lists constraints as blockers to fast flow and highlights architectural decoupling as a DevOps enabler.

NEW QUESTION # 68
In the context of DevOps. which is an effective approach when selecting tools?

- A. Standardize on a single vendor's platform
- B. Establish a toolchain
- C. Focus on testing first
- D. Encourage both Dev and Ops individually select the best tools for their own needs

Answer: B

Explanation:
The most effective approach to tool selection in DevOps is to establish a toolchain-a set of integrated tools that support the end-to-end lifecycle (planning, coding, building, testing, releasing, deploying, operating, and monitoring).
This encourages consistency, automation, and traceability, while still allowing flexibility for teams.
Why not standardize on one vendor?
This reduces flexibility, can cause vendor lock-in, and doesn't support the varied needs of Dev and Ops teams.
Encouraging independent selection (C) increases fragmentation.
Focusing solely on testing (D) ignores the broader lifecycle.
Extract-style reference:
"Establishing an integrated toolchain provides end-to-end visibility and automation across the software delivery pipeline, aligning tools with process and cultural change."
- State of DevOps Report; DevOps Handbook
PeopleCert DevOps Foundation v3.6: Recommends a toolchain approach for supporting collaborative DevOps practices.

NEW QUESTION # 69
The goal of which role is the creation of ultra-scalable and highly reliable software systems?

- A. Site reliability engineer
- B. Site resilience engineer
- C. Software engineer
- D. Product Owner

Answer: A

Explanation:
TheSite Reliability Engineer (SRE)role originated at Google and is now widely recognized. SREs apply software engineering principles to IT operations to create systems that arescalable, reliable, and highly available. Their responsibilities include:
* Designing reliability into systems (SLIs, SLOs, SLAs)

* Automating operational tasks to reduce toil
* Building monitoring and alerting systems
* Performing capacity planning and disaster recovery exercises

A(Site resilience engineer) is not a standard industry term.C(Software engineer) focuses on developing applications but not specifically on operational reliability.D(Product Owner) is a role in Agile frameworks that manages product backlog and priorities, not system reliability.

Thus, the correct answer isB - Site Reliability Engineer.
