# Google Pass Professional-Cloud-DevOps-Engineer Rate: Google Cloud Certified - Professional Cloud DevOps Engineer Exam & Leader in Qualification Exams

The Professional-Cloud-DevOps-Engineer exam questions formats are PDF dumps files, desktop practice test software, and web-based practice test software. All these Professional-Cloud-DevOps-Engineer exam questions format hold some common and unique features. Such as Professional-Cloud-DevOps-Engineer PDF dumps file is the PDF version of Google Cloud Certified - Professional Cloud DevOps Engineer Exam exam dumps that works BootcampPDF all operating systems and devices. Whereas the other two Professional-Cloud-DevOps-Engineer Practice Test questions formats are concerned, both are the mock Professional-Cloud-DevOps-Engineer exam. Both will give you a real-time Google Cloud Certified - Professional Cloud DevOps Engineer Exam exam preparation environment and you get experience to attempt the Professional-Cloud-DevOps-Engineer exam preparation experience before the final exam.

Google Professional-Cloud-DevOps-Engineer exam is designed to assess an individual's knowledge and skills in the field of cloud-based DevOps engineering. Google Cloud Certified - Professional Cloud DevOps Engineer Exam certification is intended for professionals who are interested in developing and deploying software applications in the cloud environment. Professional-Cloud-DevOps-Engineer Exam is part of the Google Cloud Certified program, which is designed to validate the knowledge and expertise of professionals in various areas of cloud computing.

## Google Cloud Certified - Professional Cloud DevOps Engineer Exam Sample Questions (Q66-Q71):

### NEW QUESTION # 66

Your team has recently deployed an NGINX-based application into Google Kubernetes Engine (GKE) and has exposed it to the public via an HTTP Google Cloud Load Balancer (GCLB) ingress. You want to scale the deployment of the application's frontend using an appropriate Service Level Indicator (SLI). What should you do?

- A. Expose the NGINX stats endpoint and configure the horizontal pod autoscaler to use the request metrics exposed by the NGINX deployment.
- **B. Install the Stackdriver custom metrics adapter and configure a horizontal pod autoscaler to use the number of requests provided by the GCLB.**
- C. Configure the vertical pod autoscaler in GKE and enable the cluster autoscaler to scale the cluster as pods expand.
- D. Configure the horizontal pod autoscaler to use the average response time from the Liveness and Readiness probes.

**Answer: B**

### NEW QUESTION # 67

A third-party application needs to have a service account key to work properly. When you try to export the key from your cloud project, you receive an error "The organization policy constraint iam.disableServiceAccountKeyCreation is enforced. You need to make the third-party application work while following Google-recommended security practices. What should you do?

- **A. Add a rule to set the iam.disableServiceAccountKeyCreation policy to off in your project and create a key.**
- B. Enable the default service account key, and download the key.
- C. Remove the iam.disableServiceAccountKeyCreation policy at the organization level, and create a key.
- D. Disable the service account key creation policy at the project's folder, and download the default key.

**Answer: A**

Explanation:

Explanation:

The best option for making the third-party application work while following Google-recommended security practices is to add a rule to set the iam.disableServiceAccountKeyCreation policy to off in your project and create a key. The iam.disableServiceAccountKeyCreation policy is an organization policy that controls whether service account keys can be created in a project or organization. By default, this policy is set to on, which means that service account keys cannot be created. However, you can override this policy at a lower level, such as a project, by adding a rule to set it to off. This way, you can create a service account key for your project without affecting other projects or organizations. You should also follow the best practices for managing service account keys, such as rotating them regularly, storing them securely, and deleting them when they are no longer needed.

### NEW QUESTION # 68

You support an e-commerce application that runs on a large Google Kubernetes Engine (GKE) cluster deployed on-premises and on Google Cloud Platform. The application consists of microservices that run in containers. You want to identify containers that are using the most CPU and memory. What should you do?

- A. Use the Stackdriver Monitoring API to create custom metrics, and then organize your containers using groups.
- B. Use Prometheus to collect and aggregate logs per container, and then analyze the results in Grafana.
- **C. Use Stackdriver Kubernetes Engine Monitoring.**
- D. Use Stackdriver Logging to export application logs to BigQuery, aggregate logs per container, and then analyze CPU and memory consumption.

**Answer: C**

Explanation:

Explanation

<https://cloud.google.com/anthos/clusters/docs/on-prem/1.7/concepts/logging-and-monitoring>

### NEW QUESTION # 69

You support an application running on App Engine. The application is used globally and accessed from various device types. You want to know the number of connections. You are using Stackdriver Monitoring for App Engine. What metric should you use?

- A. tcp\_ssl\_proxy/new\_connections
- B. tcp\_ssl\_proxy/open\_connections
- **C. flex/instance/connections/current**
- D. flex/connections/current

**Answer: C**

Explanation:

Explanation/Reference: [https://cloud.google.com/monitoring/api/metrics\\_gcp](https://cloud.google.com/monitoring/api/metrics_gcp)

### NEW QUESTION # 70

Some of your production services are running in Google Kubernetes Engine (GKE) in the eu-west-1 region.

Your build system runs in the us-west-1 region. You want to push the container images from your build system to a scalable registry to maximize the bandwidth for transferring the images to the cluster. What should you do?

- A. Push the images to Google Container Registry (GCR) using the us.gcr.io hostname.
- B. Push the images to Google Container Registry (GCR) using the gcr.io hostname.
- C. Push the images to a private image registry running on a Compute Engine instance in the eu-west-1 region.
- **D. Push the images to Google Container Registry (GCR) using the eu.gcr.io hostname.**

**Answer: D**

Explanation:

Explanation

Hostname Storage location  
gcr.io Stores images in data centers in the United States  
asia.gcr.io Stores images in data centers in Asia  
eu.gcr.io Stores images in data centers within member states of the European Union  
us.gcr.io Stores images in data centers in the United States
