Pass Pure Storage Portworx-Enterprise-Professional Certification with Ease Using Exam4Docs Exam Questions

Users who use our Portworx-Enterprise-Professional real questions already have an advantage over those who don't prepare for the exam. Our study materials can let users the most closed to the actual test environment simulation training, let the user valuable practice effectively on Portworx-Enterprise-Professional practice guide, thus through the day-to-day practice, for users to develop the confidence to pass the exam. For examination, the power is part of pass the exam but also need the candidate has a strong heart to bear ability, so our Portworx-Enterprise-Professional learning guide materials through continuous simulation testing to help you pass the Portworx-Enterprise-Professional exam.

Most people spend much money and time to prepare the Portworx-Enterprise-Professional exam tests but the result is bad. Maybe you wonder how to get the Pure Storage certification quickly and effectively? Now let Exam4Docs help you. It just takes one or two days to prepare the Portworx-Enterprise-Professional VCE Dumps and real questions, and you will pass the exam without any loss.

>> Exam Portworx-Enterprise-Professional Questions Pdf <<

Accurate Portworx-Enterprise-Professional Test | Portworx-Enterprise-Professional Minimum Pass Score

If we update, we will provide you professional latest version of Portworx-Enterprise-Professional dumps torrent as soon as possible, which means that you keep up with your latest knowledge in time. Therefore, we believe that you will never regret to use the Portworx-Enterprise-Professional exam dumps. Let's learn Portworx-Enterprise-Professional Exam Dumps, and you can pass the exam at once. When you pass the Portworx-Enterprise-Professional exam and get a certificate, you will find that you are a step closer to your dream. It will be a first step to achieve your dreams.

Pure Storage Pure Certified Portworx Enterprise Professional (PEP) Exam Sample Questions (Q41-Q46):

NEW QUESTION #41

What is a local snapshot in the context of Portworx?

- A. A snapshot that is automatically backed up to the cloud.
- B. A snapshot that is stored in a remote data center.
- C. A snapshot that is stored on the same cluster as the original volume.

Answer: C

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

A local snapshot in Portworx refers to a point-in-time of a volume's data that is stored within the same storage cluster as the original volume. Local snapshots use efficient -on-write techniques to minimize storage overhead while preserving the volume state for backup, recovery, or rollback operations. Unlike cloud or remote snapshots, local snapshots do not require network transfer or object storage integration, enabling fast snapshot creation and restoration with low latency. They are ideal for short-term data protection, testing, or recovery scenarios where immediate access to snapshots is required. Portworx's snapshot documentation describes local snapshots as the foundational snapshot type, essential for operational backups and data consistency within Kubernetes clusters using Portworx storage [Pure Storage Portworx Snapshot Guide source] .

NEW QUESTION #42

What Portworx swap requirement exists on a Portworx-enabled Linux host?

- A. Swap should be disabled.
- B. Portworx does not have a requirement for swap to be enabled or disabled.
- C. Swap should be enabled.

Answer: A

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

Portworx requires swap to be disabled on Linux hosts where it runs. Disabling swap is necessary because swap usage can cause unpredictable latency and performance degradation for storage operations. Portworx relies on consistent and predictable I/O performance for managing block devices and volumes, which is incompatible with the potential delays caused by swapping memory pages to disk. Additionally, many Kubernetes environments recommend disabling swap to meet Kubernetes scheduler requirements, aligning with Portworx's needs. Portworx installation and system requirements documentation explicitly state that swap should be disabled on nodes running Portworx to ensure cluster stability, optimal performance, and predictable behavior of storage operations [Pure Storage Portworx System Requirements source] .

NEW QUESTION #43

An infrastructure admin wants to restrict installing Portworx in two nodes.

What label does the node need to have?

- A. px/service=stop
- B. px/enabled=false
- C. px/storage-node=false

Answer: B

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

Restricting Portworx installation on certain Kubernetes nodes is achieved by labeling those nodes with px/enabled=false. This label signals the Portworx Operator or installer to exclude these nodes from Portworx deployment. This allows admins to reserve nodes for other workloads or prevent Portworx from running on unsupported hardware. The label px/service=stop or px/storage-node=false are not recognized controls in the Portworx installation process. Portworx deployment guides consistently document the use of px/enabled=false for node exclusion, providing a simple, declarative way to control cluster topology and resource assignment during Portworx installations and upgrades [Pure Storage Portworx Deployment Guide source] .

NEW QUESTION #44

A Portworx administrator wants to control which nodes will host a KVDB installation. What steps must an administrator take to ensure that KVDB installs on NODE01, NODE03, and NODE05?

- A. It is not possible to configure the location of the KVDB prior to installation.
- B. Label NODE01, NODE03, and NODE05 with 'px1/metadata-node=true' prior to installation.
- C. Change the following in the 'StorageCluster' spec prior to installation: spec:

kvdb:

selector:

matchNodeName:

- NODE01
- NODE03
- NODE05

Answer: C

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

Portworx provides a mechanism to control KVDB pod placement through the kvdb.selector.matchNodeName field in the StorageCluster Custom Resource Definition (CRD). This allows administrators to explicitly specify node names where KVDB pods will be deployed. By setting this selector to include NODE01, NODE03, and NODE05, KVDB pods will run exclusively on these nodes, ensuring better control of quorum, fault tolerance, and performance. Node labeling alone is insufficient unless the labels are properly referenced in the spec, making direct node name matching the most straightforward and reliable method. This configuration must be done prior to cluster installation to ensure proper pod placement. Official Portworx documentation on cluster deployment and KVDB configuration confirms this method as the recommended best practice for managing KVDB nodes, critical for maintaining database availability and consistency within the Portworx cluster [Pure Storage Portworx Install Guide source] .

NEW QUESTION #45

Which command shows a summary of the Portworx cluster status?

- A. helm list --px
- B. pxctl cluster status
- C. kubectl get pxstatus

Answer: B

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

The command pxctl cluster status provides a concise summary of the Portworx cluster's health and operational status. This includes node states, storage pool information, volume statuses, and quorum information. It is the primary CLI command for administrators to quickly assess cluster health and detect any issues affecting storage availability or performance. helm list --px is a Helm package management command unrelated to cluster status, and kubectl get pxstatus is not a valid Kubernetes or Portworx command. Portworx documentation recommends pxctl cluster status as an essential monitoring command during routine operations and troubleshooting to ensure the cluster is functioning properly and that all nodes are communicating and healthy \(\begin{align*} \text{Pure Storage} \) Portworx CLI Guide source \(\begin{align*} \ext{V} \)

NEW QUESTION #46

••••

Tech firms award high-paying job contracts to Pure Certified Portworx Enterprise Professional (PEP) Exam (Portworx-Enterprise-Professional) certification holders. Every year many aspirants appear in the Portworx-Enterprise-Professional test of the certification, but few of them cannot crack it because of not finding reliable Pure Certified Portworx Enterprise Professional (PEP) Exam prep materials. So, you must prepare with real exam questions to pass the certification exam. If you don't rely on actual exam questions, you will fail and loss time and money.
