

Pass-Sure AI-102 Actual Test Pdf - Updated Source of AI-102 Exam

P.S. Free 2025 Microsoft AI-102 dumps are available on Google Drive shared by ExamCost: <https://drive.google.com/open?id=1tSXoCcBl7O9j-sPB2igb0dNQ1QpOsRCn>

When preparing for the test AI-102 certification, most clients choose our products because our AI-102 learning file enjoys high reputation and boost high passing rate. Our products are the masterpiece of our company and designed especially for the certification. Our AI-102 latest study question has gone through strict analysis and verification by the industry experts and senior published authors. The clients trust our products and treat our products as the first choice. So the total amounts of the clients and the sales volume of our AI-102 learning file is constantly increasing.

Microsoft AI-102 exam is designed for individuals who want to demonstrate their expertise in designing and implementing AI solutions on the Microsoft Azure platform. AI-102 exam is suitable for professionals who have experience in developing and deploying AI solutions and want to validate their skills through a recognized certification. AI-102 Exam covers topics such as developing AI solutions using Azure Cognitive Services, implementing computer vision solutions, natural language processing, and speech-to-text and text-to-speech conversion.

Pdf AI-102 Version, AI-102 Reliable Exam Simulator

Our company has employed a lot of excellent experts and professors in the field in the past years, in order to design the best and most suitable AI-102 study materials for all customers. More importantly, it is evident to all that the AI-102 Study Materials from our company have a high quality, and we can make sure that the quality of our products will be higher than other study materials in the market.

Microsoft Designing and Implementing a Microsoft Azure AI Solution Sample Questions (Q50-Q55):

NEW QUESTION # 50

You plan to use containerized versions of the Anomaly Detector API on local devices for testing and in on- premises datacenters.

You need to ensure that the containerized deployments meet the following requirements:

Prevent billing and API information from being stored in the command-line histories of the devices that run the container.

Control access to the container images by using Azure role-based access control (Azure RBAC).

Which four actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order. (Choose four.) NOTE: More than one order of answer choices is correct. You will receive credit for any of the correct orders you select.

ACTIONS

Create a custom Dockerfile.
Pull the Anomaly Detector container image.
Distribute a docker run script.
Push the image to an Azure container registry.
Build the image.
Push the image to Docker Hub.

Answer Area

Answer:

Explanation:

Actions	
Create a custom Dockerfile.	Pull the Anomaly Detector container image.
Pull the Anomaly Detector container image.	Create a custom Dockerfile.
Distribute a docker run script.	Build the image.
Push the image to an Azure container registry.	Push the image to an Azure container registry.
Build the image.	
Push the image to Docker Hub.	

Explanation:

You are deploying Anomaly Detector API as a container. The key requirements are:

- * Prevent billing and API keys from being exposed in command-line history.
- * Control access to container images using Azure RBAC.

Step-by-step reasoning:

- * Pull the Anomaly Detector container image
- * Microsoft Cognitive Services (including Anomaly Detector) provides container images via Microsoft Container Registry.
- * You must first pull the container image locally.
- * Push the image to an Azure container registry (ACR)
- * To enforce Azure RBAC, you need to use Azure Container Registry instead of Docker Hub.
- * Storing in ACR ensures authentication and role-based access control to the image.
- * Distribute a docker run script
- * Instead of providing credentials directly on the command line (which risks storing API keys in shell history), best practice is to distribute a docker run script (or use environment variables / mounted files) to run the container.
- * This prevents exposure of sensitive information.
- * Run the container on local devices or on-premises datacenters
- * The container now runs securely, with API key and billing info injected at runtime via environment variables or mounted secrets.
- * Create a custom Dockerfile # Not needed, because Microsoft provides the official Anomaly Detector container image.
- * Build the image # Not required; again, the container is prebuilt.
- * Push the image to Docker Hub # Does not allow RBAC, so this would not meet the security requirement.

Correct Sequence:

- * Pull the Anomaly Detector container image.
- * Push the image to an Azure container registry.
- * Distribute a docker run script.
- * Run the container in the local or on-prem environment.
- * Use Cognitive Services containers
- * Azure Container Registry - Authentication and RBAC
- * Best practices for running Cognitive Services containers

NEW QUESTION # 51

You are using a Language Understanding service to handle natural language input from the users of a web-based customer agent.

The users report that the agent frequently responds with the following generic response: "Sorry, I don't understand that." You need to improve the ability of the agent to respond to requests.

Which three actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order. (Choose three.)

Actions

Answer Area

Add prebuilt domain models as required.
Validate the utterances logged for review and modify the model.
Migrate authoring to an Azure resource authoring key.
Enable active learning.
Enable log collection by using Log Analytics.
Train and republish the Language Understanding model.

Answer:

Explanation:

Actions

Answer Area

Add prebuilt domain models as required.
Validate the utterances logged for review and modify the model.
Migrate authoring to an Azure resource authoring key.
Enable active learning.
Enable log collection by using Log Analytics.
Train and republish the Language Understanding model.

Enable active learning.
Validate the utterances logged for review and modify the model.
Train and republish the Language Understanding model.

Explanation

- enable active learning
- validate the utterances
- train and republish

NEW QUESTION # 52

You have an Azure subscription that has the following configurations:

* Subscription ID: 8d3591aa-96b8-4737-ad09-00f9b1ed35ad

* Tenant ID: 3edfe572-cbS4-3ced-ae12-c5c177f39a12

You plan to create a resource that will perform sentiment analysis and optical character recognition (OCR).

You need to use an HTTP request to create the resource in the subscription. The solution must use a single key and endpoint.

How should you complete the request? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Answer Area

https://management.azure.com/

NEW QUESTION # 53

You are building a model that will be used in an iOS app.

You have images of cats and dogs. Each image contains either a cat or a dog.

You need to use the Custom Vision service to detect whether the images is of a cat or a dog.

How should you configure the project in the Custom Vision portal? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Project Types: ▼

Classification
Object Detection

Classification Types: ▼

Multiclass (Single tag per image)
Multilabel (Multiple tags per image)

Domains: ▼

Audit
Food
General
General (compact)
Landmarks
Landmarks (compact)
Retail
Retail (compact)

Answer:

Explanation:

Graphical user interface, text, application, email Description automatically generated

Project Types: ▼

Classification
Object Detection

Classification Types: ▼

Multiclass (Single tag per image)
Multilabel (Multiple tags per image)

Domains: ▼

Audit
Food
General
General (compact)
Landmarks
Landmarks (compact)
Retail
Retail (compact)

Box 1: Classification

Box 2: Multiclass

A multiclass classification project is for classifying images into a set of tags, or target labels. An image can be assigned to one tag only.

Box 3: General

General: Optimized for a broad range of image classification tasks. If none of the other specific domains are appropriate, or if you're unsure of which domain to choose, select one of the General domains.

NEW QUESTION # 54

You are developing a webpage that will use the Video Indexer service to display videos of internal company meetings.

You embed the Player widget and the Cognitive Insights widget into the page.

You need to configure the widgets to meet the following requirements:

Ensure that users can search for keywords.

Display the names and faces of people in the video.

Show captions in the video in English (United States).

How should you complete the URL for each widget? To answer, drag the appropriate values to the correct targets. Each value may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.

NOTE: Each correct selection is worth one point.

Values

- en-US
- false
- people,keywords
- people,search
- search
- true

Answer Area

Cognitive Insights Widget

https://www.videoindexer.ai/embed/insights/<accountId>/<videoId>/?widgets= [Value] controls= [Value]

Player Widget

https://www.videoindexer.ai/embed/player/<accountId>/<videoId>/? showcaptions= [Value] captions= [Value]

Answer:

Explanation:
