DP-203 Valid Test Dumps - Pdf DP-203 Exam Dump

The DP-203 certificate is one of the popular IT certificates. Success in the DP-203 credential examination enables you to advance your career at a rapid pace. You become eligible for many high-paying jobs with the DP-203 certification. To pass the DP-203 test

on your first sitting, you must choose reliable Data Engineering on Microsoft Azure exam study material. Don't worry about DP-203 test preparation, because Itbraindumps is offering DP-203 actual exam questions at an affordable price. Hundreds of IT aspirants have cracked the DP-203 examination by just preparing with our real test questions. If you also want to become a DP-203 certified without any anxiety, download Microsoft updated test questions and start preparing today. These real DP-203 Dumps come in desktop practice exam software, web-based practice test, and DP-203 PDF document. Below are specifications of these three formats.

Microsoft Data Engineering on Microsoft Azure Sample Questions (Q82-Q87):

NEW QUESTION # 82

You have an Azure Data Factory instance that contains two pipelines named Pipeline1 and Pipeline2. Pipeline1 has the activities shown in the following exhibit.

Pipeline2 has the activities shown in the following exhibit.

You execute Pipeline2, and Stored procedure1 in Pipeline1 fails. What is the status of the pipeline runs?

- A. Pipeline1 and Pipeline2 succeeded.
- B. Pipeline1 and Pipeline2 failed.
- C. Pipeline1 succeeded and Pipeline2 failed.
- D. Pipeline1 failed and Pipeline2 succeeded.

Answer: A

Explanation:

Explanation

Activities are linked together via dependencies. A dependency has a condition of one of the following: Succeeded, Failed, Skipped, or Completed.

Consider Pipeline1:

If we have a pipeline with two activities where Activity2 has a failure dependency on Activity1, the pipeline will not fail just because Activity1 failed. If Activity1 fails and Activity2 succeeds, the pipeline will succeed.

This scenario is treated as a try-catch block by Data Factory.

Waterfall chart Description automatically generated with medium confidence

The failure dependency means this pipeline reports success.

Note:

If we have a pipeline containing Activity1 and Activity2, and Activity2 has a success dependency on Activity1, it will only execute if Activity1 is successful. In this scenario, if Activity1 fails, the pipeline will fail.

NEW QUESTION # 83

You are planning the deployment of Azure Data Lake Storage Gen2.

You have the following two reports that will access the data lake:

Report1: Reads three columns from a file that contains 50 columns.

Report2: Queries a single record based on a timestamp.

You need to recommend in which format to store the data in the data lake to support the reports. The solution must minimize read times.

What should you recommend for each report? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Report1: ▼

Avro
CSV
Parquet
TSV

Report2: ▼

Avro
CSV 
Parquet
TSV

Answer:

Explanation:

Report1: ▼

Avro
CSV
Parquet
TSV

Report2: ▼

Avro
CSV
Parquet
TSV

Explanation:

Report1:

▼
Avro
CSV
Parquet
TSV

Report2:

▼
Avro
CSV 
Parquet
TSV

Report1: CSV

CSV: The destination writes records as delimited data.

Report2: AVRO

AVRO supports timestamps.

Not Parquet, TSV: Not options for Azure Data Lake Storage Gen2.

NEW QUESTION # 84

You have an Azure subscription that is linked to a hybrid Azure Active Directory (Azure AD) tenant. The subscription contains an Azure Synapse Analytics SQL pool named Pool1.

You need to recommend an authentication solution for Pool1. The solution must support multi-factor authentication (MFA) and database-level authentication.

Which authentication solution or solutions should you include in the recommendation? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

MFA:

▼
Azure AD authentication
Microsoft SQL Server authentication
Passwordless authentication
Windows authentication

Database-level authentication:

▼
Application roles
Contained database users
Database roles
Microsoft SQL Server logins

Answer:

Explanation:

Explanation:

Box 1: Azure AD authentication

Azure Active Directory authentication supports Multi-Factor authentication through Active Directory Universal Authentication.

Box 2: Contained database users

Azure Active Directory Uses contained database users to authenticate identities at the database level.

Reference:

<https://docs.microsoft.com/en-us/azure/synapse-analytics/sql-data-warehouse/sql-data-warehouse-authentication>

NEW QUESTION # 85

You have files and folders in Azure Data Lake Storage Gen2 for an Azure Synapse workspace as shown in the following exhibit.

You create an external table named ExtTable that has LOCATION= '/topfolder/'.

When you query ExtTable by using an Azure Synapse Analytics serverless SQL pool, which files are returned?

- A. File2.csv and File3.csv only
- B. File1.csv only
- C. File1.csv and File4.csv only
- D. File1.csv, File2.csv, File3.csv, and File4.csv

Answer: D

Explanation:

To run a T-SQL query over a set of files within a folder or set of folders while treating them as a single entity or rowset, provide a path to a folder or a pattern (using wildcards) over a set of files or folders.

Reference:

<https://docs.microsoft.com/en-us/azure/synapse-analytics/sql/query-data-storage#query-multiple-files-or-folders>

NEW QUESTION # 86

You have an Azure Synapse Analytics SQL pool named Pool1 on a logical Microsoft SQL server named Server1.

You need to implement Transparent Data Encryption (TDE) on Pool1 by using a custom key named key1.

Which five actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

The screenshot shows a question interface with two main sections: 'Actions' and 'Answer Area'. The 'Actions' section contains five items in a list box:

- Enable TDE on Pool1.
- Assign a managed identity to Server1.
- Configure key1 as the TDE protector for Server1.
- Add key1 to the Azure key vault.
- Create an Azure key vault and grant the managed identity permissions to the key vault.

The 'Answer Area' is currently empty. Navigation arrows (left, right, up, down) are visible between the two sections.

Answer:

Explanation:

The screenshot shows the same question interface, but now the 'Answer Area' contains five actions in a specific sequence, indicated by a dashed red border and numbered arrows (1-5) on the right side:

- Assign a managed identity to Server1.
- Create an Azure key vault and grant the managed identity permissions to the key vault.
- Add key1 to the Azure key vault.
- Configure key1 as the TDE protector for Server1.
- Enable TDE on Pool1.

The 'Actions' list on the left remains the same. The correct sequence is highlighted with a dashed red border and numbered arrows.

Explanation

Graphical user interface, text, application Description automatically generated

Step 1: Assign a managed identity to Server1

You will need an existing Managed Instance as a prerequisite.

Step 2: Create an Azure key vault and grant the managed identity permissions to the vault Create Resource and setup Azure Key Vault.

Step 3: Add key1 to the Azure key vault

The recommended way is to import an existing key from a .pfx file or get an existing key from the vault.

Alternatively, generate a new key directly in Azure Key Vault.

Step 4: Configure key1 as the TDE protector for Server1

Provide TDE Protector key

Step 5: Enable TDE on Pool1
