## Latest TDA-C01 Exam Dumps - Exam TDA-C01 Flashcards

If you want our TDA-C01 study materials to download and print, the PDF version is perfect for you since it has the function of being printable. And the PDF version of our TDA-C01 exam questions can be noted when you want to memory something as well as to indicate the keypoints. Also, our TDA-C01 Preparation exam is unlimited in number of devices, making it easy for you to learn anytime, anywhere.

## Tableau Certified Data Analyst Sample Questions (Q42-Q47):

### NEW QUESTION # 42

You have the following visualization.

You Create a table calculation named Rank\_Score that has a formula of  $\text{RANK}(\text{AVG}([\text{Score}]))$ , and you drag Rank\_Score to Text on the Marks cards.

What is the Rank Score value for Student ID 4220?

- A. 0
- **B. 1**
- C. 2
- D. 3

**Answer: B**

Explanation:

To determine the Rank Score value for Student ID 4220, we look at the visualization provided and apply the table calculation of  $\text{RANK}(\text{AVG}([\text{Score}]))$ . This function will rank the average scores in ascending order by default, with the lowest score receiving the rank of 1.

Based on the provided visualization, the scores for the students are as follows (from lowest to highest average score):

- \* Student ID 4183: 39 (Rank 1)
- \* Student ID 4220: 71 (Rank 6)
- \* Student ID 4247: 71 (Rank 6, same score as ID 4220 so they share the same rank)
- \* Student ID 4124: 75.5
- \* Student ID 4050: 64
- \* Student ID 4205: 67
- \* Student ID 4056: 66

Since Student ID 4220 has an average score of 71, which is the third-highest score, it shares the rank with Student ID 4247.

However, since Tableau ranks without gaps, the actual rank assigned is 6, considering that there are two students with a rank of 4 (due to the same average score being the second lowest), making the next rank number 6.

Note: The actual ranks for the highest scores are not provided, but they are not needed to determine the rank for Student ID 4220.

### NEW QUESTION # 43

A Data Analyst has the following sets in a Tableau workbook:

- \* Top N Customers
- \* Customers of 2024
- \* Top N Products
- \* Sellers of 2024

Which two sets can the analyst combine? (Choose two.)

- A. Top N Customers
- B. Sellers of 2024
- C. Customers of 2024
- D. Top N Products

**Answer: A,C**

### NEW QUESTION # 44

You have two tables named EmployeeInfo and DepartmentInfo. EmployeeInfo contains four fields named Full Name, Department ID, Start Date, and Salary.

DepartmentInfo contains four fields named Department Name, Size, Department ID, and VP.

You want to combine the tables to meet the following requirements:

- . Each record in EmployeeInfo must be retained in the combined table.
- . The records must contain the Department Name, Size, and VP fields.
- \* Every record must have a full name.

Which type of join should you use?

- A. Inner
- B. Union
- C. Left
- D. Full outer

**Answer: C**

Explanation:

To combine the tables and meet the requirements, you should use a left join. A left join will keep all the records from the left table (EmployeeInfo) and match them with the records from the right table (DepartmentInfo) based on the common field (Department ID). If there is no matching record in the right table, the fields from the right table will be null. This way, you will retain all the records from EmployeeInfo, and also include the Department Name, Size, and VP fields from DepartmentInfo. Every record will have a full name because it is a field from the left table. A left join will look like this:

Join Types in Tableau

### NEW QUESTION # 45

You have the following line chart that shows the average sales by month.

Which month had the biggest increase in swage sales compared to the previous month in 2019?

- A. October
- B. November
- C. December
- D. August

**Answer: B**

Explanation:

Based on the line chart provided, each point on the line chart represents the average sales for a given month, and the percentage values indicate the change in average sales compared to the previous month. The month of November shows a significant increase from the month of October, indicated by a large upward spike on the chart and a high percentage increase.

#### NEW QUESTION # 46

You have the following visualization.

The Last() calculation is set to compute using Table (across)

Which value will appear in the crosstab for the Consumer segment of the year 2018 if you change compute to use Order Date?

- A. 0
- B. 1
- C. 2
- D. 3

**Answer: A**

Explanation:

The value that will appear in the crosstab for the Consumer segment of the year 2018 if you change compute to use Order Date is 0. The Last() calculation is a table calculation that returns the number of rows from the current row to the last row in the partition. The partition is determined by how you compute the calculation. In this case, you change compute to use Order Date, which means that the calculation will be performed for each value of Order Date.

The crosstab shows that there are two values of Order Date for the Consumer segment of the year 2018: Q1 and Q4. The Last() calculation will return 0 for Q4, because it is the last row in the partition. It will return 1 for Q1, because it is one row away from the last row in the partition.

The other options are not correct for this scenario. The Last() calculation will not return 2, 3, or 4 for any value of Order Date, because there are only two values in each partition.

## NEW QUESTION # 47

.....

Our technician will check the update of TDA-C01 exam questions every day, and we can guarantee that you can get a free update service from the date of purchase. Once you have any questions and doubts about the TDA-C01 exam questions we will provide you with our customer service before or after the sale, you can contact us if you have question or doubt about our TDA-C01 Exam Materials and the professional personnel can help you solve your issue about using TDA-C01 study materials.
