

Pass Your Palo Alto Networks NGFW-Engineer Exam with Confidence Using VerifiedDumps Real NGFW-Engineer Questions

Download NGFW Engineer Exam Dumps for Good Preparation

Exam : NGFW Engineer

Title : Palo Alto Networks
Next-Generation Firewall
Engineer

<https://www.passcert.com/NGFW-Engineer.html>

1 / 5

What's more, part of that VerifiedDumps NGFW-Engineer dumps now are free: <https://drive.google.com/open?id=1NAYygiGRrfdJEIVeY5Fr4zOJWJQ7xit>

It has a lot of advantages. Giving yourself more time to prepare for the Palo Alto Networks NGFW-Engineer exam questions using it will allow you to obtain your NGFW-Engineer certification. It is one of the major reasons many people prefer buying Palo Alto Networks Next-Generation Firewall Engineer NGFW-Engineer Exam Dumps preparation material. It was designed by the best Palo Alto Networks Exam Questions who took the time to prepare it.

During the operation of the NGFW-Engineer study materials on your computers, the running systems of the NGFW-Engineer study guide will be flexible, which saves you a lot of troubles and help you concentrate on study. If you try on it, you will find that the operation systems of the NGFW-Engineer Exam Questions we design have strong compatibility. So the running totally has no problem. And you can free download the demos of the NGFW-Engineer practice engine to have a experience before payment.

NGFW-Engineer Reliable Test Practice & Reliable NGFW-Engineer Test Online

Our website has focused on the study of NGFW-Engineer PDF braindumps for many years and created latest Palo Alto Networks NGFW-Engineer dumps pdf for all level of candidates. All questions and answers are tested and approved by our professionals who are specialized in the NGFW-Engineer Pass Guide. To ensure your post-purchase peace of mind, we provide you with up to 12 months of free Palo Alto Networks NGFW-Engineer exam questions updates. Grab these offers today!

Palo Alto Networks Next-Generation Firewall Engineer Sample Questions (Q17-Q22):

NEW QUESTION # 17

After an engineer configures an IPSec tunnel with a Cisco ASA, the Palo Alto Networks firewall generates system messages reporting the tunnel is failing to establish.

Which of the following actions will resolve this issue?

- A. Validate the tunnel interface VLAN against the peer's configuration.
- B. Ensure that an active static or dynamic route exists for the VPN peer with next hop as the tunnel interface.
- **C. Configure the Proxy IDs to match the Cisco ASA configuration.**
- D. Check that IPSec is enabled in the management profile on the external interface.

Answer: C

Explanation:

The Proxy IDs (or Traffic Selectors) define the local and remote subnets that are allowed to communicate over the IPSec tunnel. If the Proxy IDs on the Palo Alto Networks firewall do not match the configuration on the Cisco ASA, the tunnel will fail to establish because the firewalls won't agree on which traffic to encrypt. Ensuring that the Proxy IDs match between the Palo Alto Networks firewall and the Cisco ASA will resolve the issue.

NEW QUESTION # 18

An NGFW engineer is establishing bidirectional connectivity between the accounting virtual system (VSYS) and the marketing VSYS. The traffic needs to transition between zones without leaving the firewall (no external physical connections). The interfaces for each VSYS are assigned to separate virtual routers (VRs), and inter-VR static routes have been configured. An external zone has been created correctly for each VSYS. Security policies have been added to permit the desired traffic between each zone and its respective external zone. However, the desired traffic is still unable to successfully pass from one VSYS to the other in either direction.

Which additional configuration task is required to resolve this issue?

- **A. Add each VSYS to the list of visible virtual systems of the other VSYS.**
- B. Create a transit VSYS and route all inter-VSYS traffic through it.
- C. Enable the "allow inter-VSYS traffic" option in both external zone configurations.
- D. Create Security policies to allow the traffic between the two external zones.

Answer: A

Explanation:

In Palo Alto Networks firewalls, each virtual system (VSYS) is typically isolated from other VSYSs, meaning that traffic between different VSYSs cannot pass through the firewall by default. In this case, since the interfaces for each VSYS are assigned to separate virtual routers (VRs), and the desired traffic is still not passing between the two VSYSs, the firewall needs to be explicitly configured to allow traffic between them.

The required configuration is to add each VSYS to the list of visible virtual systems of the other VSYS. This allows inter-VSYS communication to be enabled, effectively permitting the traffic to pass between the zones of different VSYSs.

NEW QUESTION # 19

Which configuration step is required when implementing a new self-signed root certificate authority (CA) certificate for SSL decryption on a Palo Alto Networks firewall?

- **A. Import the new subordinate CA certificate into the trust stores of all client devices.**
- B. Set the subordinate CA certificate as the default routing certificate for all network traffic.
- C. Disable all existing SSL decryption rules until the new certificate is fully propagated.
- D. Configure the subordinate CA to issue certificates with indefinite validity periods.

Answer: A

Explanation:

When implementing a new self-signed root certificate authority (CA) for SSL decryption on a Palo Alto Networks firewall, the subordinate CA certificate (which is generated by the firewall) must be imported into the trust stores of all client devices. This ensures that client devices trust the firewall as a valid certificate authority, enabling the firewall to decrypt and re-encrypt SSL traffic. Importing the subordinate CA certificate into the client devices' trust stores is necessary for those devices to trust the new self-signed root CA and properly handle SSL decryption traffic.

NEW QUESTION # 20

Which statement describes the role of Terraform in deploying Palo Alto Networks NGFWs?

- A. It acts as a logging service for NGFW performance metrics.
- **B. It provides Infrastructure-as-Code (IaC) to automate NGFW deployment.**
- C. It manages threat intelligence data synchronization with NGFWs.
- D. It orchestrates real-time traffic inspection for network segments.

Answer: B

Explanation:

Terraform is an Infrastructure-as-Code (IaC) tool that automates the provisioning and management of infrastructure resources, including Palo Alto Networks Next-Generation Firewalls (NGFWs). By using Terraform configuration files, administrators can define and deploy NGFW instances across cloud environments (such as AWS, Azure, and GCP) efficiently and consistently.

Terraform enables:

Automated firewall deployment in cloud environments.

Configuration of security policies and networking settings in a declarative manner.

Scalability and repeatability, reducing manual intervention in firewall provisioning.

NEW QUESTION # 21

Which type of firewall resource can be assigned when configuring a new firewall virtual system (VSYS)?

- A. Security profile limit
- B. ICPU
- **C. Sessions limit**
- D. Memory

Answer: C

Explanation:

When configuring a new firewall virtual system (VSYS) on a Palo Alto Networks firewall, one of the resources that can be assigned is the sessions limit. This setting allows the administrator to control the number of active sessions that can be handled by the VSYS, ensuring that each virtual system has an appropriate allocation of resources based on its needs.

NEW QUESTION # 22

.....

The sources and content of our NGFW-Engineer practice dumps are all based on the real NGFW-Engineer exam. And they are the masterpieces of professional expertise in these areas with reasonable prices. Besides, they are highly efficient for passing rate, which is between 98 to 100 percent, so they can help you save time and cut down additional time to focus on the NGFW-Engineer Actual Exam review only. We understand your drive for the certificate, so you have a focus already and that is a good start.
