

Pass4sure Google Associate-Data-Practitioner Exam Prep, Associate-Data-Practitioner Sample Exam

Google Associate-Data-Practitioner Exam Prep Guide By PassExamHub.com

The Google Associate-Data-Practitioner Exam Prep Guide is a concise, expert-designed resource for aspiring data professionals. It features targeted practice questions, clear answer explanations, and exam-focused content on tools like BigQuery, Looker Studio, and Dataform. Perfect for beginners or those validating their data skills, this guide helps you study smarter and pass with confidence.

Why PassExamHub?

PassExamHub helps you pass with confidence. Here's why learners trust us:

1. Up-to-date content based on the latest exam format
2. Real exam-style practice for a realistic test experience
3. Clear explanations to understand both answers and concepts
4. Beginner-friendly language and examples
5. Affordable access to high-quality prep materials

PassExamHub — The Best Choice for This Exam

When preparing to take the Google Associate-Data-Practitioner exam, PassExamHub is the one that stands out due to its simplicity, effectiveness, and accuracy. Our well-crafted content is designed by experts to correspond to the tested skills and knowledge on the actual exam. If you're reviewing data wrangling or exploring visualization tools, PassExamHub gives you all the resources you require in one accessible location.

BTW, DOWNLOAD part of ExamsLabs Associate-Data-Practitioner dumps from Cloud Storage: https://drive.google.com/open?id=1_4PO8rhYaC0hS6xBgCfnfIoptlw1ZISl

With passing rate more than 98 percent from exam candidates who chose our Google Associate-Data-Practitioner Study Guide, we have full confidence that your Associate-Data-Practitioner actual test will be a piece of cake by them. Our Google Cloud Associate Data Practitioner exam questions provide with the software which has a variety of self-study and self-assessment functions to detect learning results.

This updated Google Associate-Data-Practitioner exam study material of ExamsLabs consists of these 3 formats: Google Cloud Associate Data Practitioner (Associate-Data-Practitioner) PDF, desktop practice test software, and web-based practice exam. Each format of ExamsLabs aids a specific preparation style and offers unique advantages, each of which is beneficial for strong Google Cloud Associate Data Practitioner (Associate-Data-Practitioner) exam preparation. The features of our three formats are listed below. You can choose any format as per your practice needs.

Pass4sure Associate-Data-Practitioner Exam Prep - 100% Pass Quiz Google Associate-Data-Practitioner - Google Cloud Associate Data Practitioner

First-grade Sample Exam

Improve your professional ability with our Associate-Data-Practitioner certification. Getting qualified by the Google certification will position you for better job opportunities and higher salary. Now, let's start your preparation with Associate-Data-Practitioner training material. The Associate-Data-Practitioner practice pdf offered by ExamsLabs latest pdf is the latest and valid study material which suitable for all of you. The Associate-Data-Practitioner free demo is especially for you to free download for try before you buy. You can get a lot from the Associate-Data-Practitioner simulate exam dumps and get your Associate-Data-Practitioner certification easily.

Google Cloud Associate Data Practitioner Sample Questions (Q31-Q36):

NEW QUESTION # 31

You need to create a data pipeline that streams event information from applications in multiple Google Cloud regions into BigQuery for near real-time analysis. The data requires transformation before loading. You want to create the pipeline using a visual interface. What should you do?

- **A. Push event information to a Pub/Sub topic. Create a Dataflow job using the Dataflow job builder.**
- B. Push event information to Cloud Storage, and create an external table in BigQuery. Create a BigQuery scheduled job that executes once each day to apply transformations.
- C. Push event information to a Pub/Sub topic. Create a Cloud Run function to subscribe to the Pub/Sub topic, apply transformations, and insert the data into BigQuery.
- D. Push event information to a Pub/Sub topic. Create a BigQuery subscription in Pub/Sub.

Answer: A

Explanation:

Pushing event information to a Pub/Sub topic and then creating a Dataflow job using the Dataflow job builder is the most suitable solution. The Dataflow job builder provides a visual interface to design pipelines, allowing you to define transformations and load data into BigQuery. This approach is ideal for streaming data pipelines that require near real-time transformations and analysis. It ensures scalability across multiple regions and integrates seamlessly with Pub/Sub for event ingestion and BigQuery for analysis.

NEW QUESTION # 32

You have a BigQuery dataset containing sales data. This data is actively queried for the first 6 months. After that, the data is not queried but needs to be retained for 3 years for compliance reasons. You need to implement a data management strategy that meets access and compliance requirements, while keeping cost and administrative overhead to a minimum. What should you do?

- A. Set up a scheduled query to export the data to Cloud Storage after 6 months. Write a stored procedure to delete the data from BigQuery after 3 years.
- B. Use BigQuery long-term storage for the entire dataset. Set up a Cloud Run function to delete the data from BigQuery after 3 years.
- C. Store all data in a single BigQuery table without partitioning or lifecycle policies.
- **D. Partition a BigQuery table by month. After 6 months, export the data to Coldline storage. Implement a lifecycle policy to delete the data from Cloud Storage after 3 years.**

Answer: D

Explanation:

Partitioning the BigQuery table by month allows efficient querying of recent data for the first 6 months, reducing query costs. After 6 months, exporting the data to Coldline storage minimizes storage costs for data that is rarely accessed but needs to be retained for compliance. Implementing a lifecycle policy in Cloud Storage automates the deletion of the data after 3 years, ensuring compliance while reducing administrative overhead. This approach balances cost efficiency and compliance requirements effectively.

NEW QUESTION # 33

Following a recent company acquisition, you inherited an on-premises data infrastructure that needs to move to Google Cloud. The acquired system has 250 Apache Airflow directed acyclic graphs (DAGs) orchestrating data pipelines. You need to migrate the pipelines to a Google Cloud managed service with minimal effort. What should you do?

- A. Convert each DAG to a Cloud Workflow and automate the execution with Cloud Scheduler.
- B. Create a Cloud Data Fusion instance. For each DAG, create a Cloud Data Fusion pipeline.
- **C. Create a new Cloud Composer environment and copy DAGs to the Cloud Composer dags/ folder.**
- D. Create a Google Kubernetes Engine (GKE) standard cluster and deploy Airflow as a workload. Migrate all DAGs to the new Airflow environment.

Answer: C

Explanation:

Comprehensive and Detailed in Depth Explanation:

Why B is correct: Cloud Composer is a managed Apache Airflow service that provides a seamless migration path for existing Airflow DAGs.

Simply copying the DAGs to the Cloud Composer folder allows them to run directly on Google Cloud.

Why other options are incorrect: A: Cloud Workflows is a different orchestration tool, not compatible with Airflow DAGs.

C: GKE deployment requires setting up and managing a Kubernetes cluster, which is more complex.

D: Cloud Data Fusion is a data integration tool, not suitable for orchestrating existing pipelines.

NEW QUESTION # 34

Your retail company collects customer data from various sources:

Online transactions: Stored in a MySQL database

Customer feedback: Stored as text files on a company server

The Google logo is displayed in its standard multi-colored font (blue, red, yellow, blue, green, red).

examlabs.com

Social media activity: Streamed in real-time from social media platforms

The Google logo is displayed in its standard multi-colored font (blue, red, yellow, blue, green, red).

examlabs.com

You are designing a data pipeline to extract this data. Which Google Cloud storage system(s) should you select for further analysis and ML model training?

- A. 1. Online transactions: BigQuery
2. Customer feedback: Cloud Storage
3. Social media activity: BigQuery
- B. 1. Online transactions: Cloud Storage

- 2. Customer feedback: Cloud Storage
- 3. Social media activity: Cloud Storage
- C. 1. Online transactions: Bigtable
 - 2. Customer feedback: Cloud Storage
 - 3. Social media activity: CloudSQL for MySQL
- D. 1. Online transactions: Cloud SQL for MySQL
 - 2. Customer feedback: BigQuery
 - 3. Social media activity: Cloud Storage

Answer: A

Explanation:

Online transactions: Storing the transactional data in BigQuery is ideal because BigQuery is a serverless data warehouse optimized for querying and analyzing structured data at scale. It supports SQL queries and is suitable for structured transactional data.

Customer feedback: Storing customer feedback in Cloud Storage is appropriate as it allows you to store unstructured text files reliably and at a low cost. Cloud Storage also integrates well with data processing and ML tools for further analysis.

Social media activity: Storing real-time social media activity in BigQuery is optimal because BigQuery supports streaming inserts, enabling real-time ingestion and analysis of data. This allows immediate analysis and integration into dashboards or ML pipelines.

NEW QUESTION # 35

Your company uses Looker to visualize and analyze sales data. You need to create a dashboard that displays sales metrics, such as sales by region, product category, and time period. Each metric relies on its own set of attributes distributed across several tables. You need to provide users the ability to filter the data by specific sales representatives and view individual transactions. You want to follow the Google-recommended approach. What should you do?

- A. Create multiple Explores, each focusing on each sales metric. Link the Explores together in a dashboard using drill-down functionality.
- **B. Create a single Explore with all sales metrics. Build the dashboard using this Explore.**
- C. Use Looker's custom visualization capabilities to create a single visualization that displays all the sales metrics with filtering and drill-down functionality.
- D. Use BigQuery to create multiple materialized views, each focusing on a specific sales metric. Build the dashboard using these views.

Answer: B

Explanation:

Creating a single Explore with all the sales metrics is the Google-recommended approach. This Explore should be designed to include all relevant attributes and dimensions, enabling users to analyze sales data by region, product category, time period, and other filters like sales representatives. With a well-structured Explore, you can efficiently build a dashboard that supports filtering and drill-down functionality. This approach simplifies maintenance, provides a consistent data model, and ensures users have the flexibility to interact with and analyze the data seamlessly within a unified framework.

Looker's recommended approach for dashboards is a single, unified Explore for scalability and usability, supporting filters and drill-downs.

* Option A: Materialized views in BigQuery optimize queries but bypass Looker's modeling layer, reducing flexibility.

* Option B: Custom visualizations are for specific rendering, not multi-metric dashboards with filtering /drill-down.

* Option C: Multiple Explores fragment the data model, complicating dashboard cohesion and maintenance.

NEW QUESTION # 36

.....

If you want to achieve maximum results with minimum effort in a short period of time, and want to pass the Google Associate-Data-Practitioner Exam. You can use ExamsLabs's Google Associate-Data-Practitioner exam training materials. The training materials of ExamsLabs are the product that through the test of practice. Many candidates proved it does 100% pass the exam. With it, you will reach your goal, and can get the best results.

Associate-Data-Practitioner Sample Exam: <https://www.examslabs.com/Google/Google-Cloud-Platform/best-Associate-Data-Practitioner-exam-dumps.html>

Yet the product was much too expensive, it ran into opposition from some Associate-Data-Practitioner communities who thought Segway users would run over pedestrians, and it turned out that there was little compelling need for the product.
