

PCCP Certification & Pass PCCP Guide

BONUS!!! Download part of PrepAwayETE PCCP dumps for free: <https://drive.google.com/open?id=1Wa5MF1--fUZ8lgq0Z5lr4ADKcmBMrJaT>

The PrepAwayETE is one of the top-rated and renowned platforms that has been offering real and valid Palo Alto Networks Certified Cybersecurity Practitioner (PCCP) exam practice test questions for many years. During this long time period countless Palo Alto Networks Certified Cybersecurity Practitioner (PCCP) exam candidates have passed their dream certification and they are now certified Palo Alto Networks professionals and pursuing a rewarding career in the market.

Palo Alto Networks PCCP Exam Syllabus Topics:

Topic	Details
Topic 1	Endpoint Security: This domain is aimed at an Endpoint Security Analyst and covers identifying indicators of compromise (IOCs) and understanding the limits of signature-based anti-malware. It includes concepts like User and Entity Behavior Analytics (UEBA), endpoint detection and response (EDR), and extended detection and response (XDR). It also describes behavioral threat prevention and endpoint security technologies such as host-based firewalls, intrusion prevention systems, device control, application control, disk encryption, patch management, and features of Cortex XDR.
Topic 2	Security Operations: This final section measures skills of a Security Operations Analyst and covers key characteristics and practices of threat hunting and incident response processes. It explains functions and benefits of security information and event management (SIEM) platforms, security orchestration, automation, and response (SOAR) tools, and attack surface management (ASM) platforms. It also highlights the functionalities of Cortex solutions, including XSOAR, Xpanse, and XSIAM, and describes services offered by Palo Alto Networks' Unit 42.
Topic 3	- Network Security: This domain targets a Network Security Specialist and includes knowledge of Zero Trust Network Access (ZTNA) characteristics, functions of stateless and next-generation firewalls (NGFWs), and the purpose of microsegmentation. It also covers common network security technologies such as intrusion prevention systems (IPS), URL filtering, DNS security, VPNs, and SSL. - TLS decryption. Candidates must understand the limitations of signature-based protection, deployment options for NGFWs, cybersecurity concerns in operational technology (OT) and IoT, cloud-delivered security services, and AI-powered security functions like Precision AI.

PCCP Test Quiz & PCCP Actual Test & PCCP Test Torrent

Our Software version has the advantage of simulating the real PCCP exam environment. Many candidates can't successfully pass their real PCCP exams for the reason that they are too nervous to performance rightly as they do the practices. This Software version of PCCP practice materials will exactly help overcome their psychological fear. Besides, the scores will show out when you finish the practice, so after a few times, you will definitely do it better and better. You will be bound to pass your PCCP Exam since you have perfected yourself in taking the PCCP exam.

Palo Alto Networks Certified Cybersecurity Practitioner Sample Questions (Q34-Q39):

NEW QUESTION # 34

An administrator finds multiple gambling websites in the network traffic log. What can be created to dynamically block these websites?

- A. Application group
- B. Decryption policy
- C. URL category
- D. Custom signatures

Answer: C

Explanation:

URL categories classify websites based on content type or risk, enabling dynamic policy enforcement such as blocking or allowing access. Administrators can create custom URL categories to group sites like gambling domains and apply blocking rules across the firewall infrastructure. Palo Alto Networks firewalls leverage URL categorization combined with threat intelligence to provide granular web filtering, reducing exposure to malicious or unwanted sites. This dynamic grouping approach is more manageable and scalable than creating individual signatures or static lists and allows for automated policy application aligned with organizational compliance requirements.

NEW QUESTION # 35

What role do containers play in cloud migration and application management strategies?

- A. They enable companies to use cloud-native tools and methodologies.
- B. They are used to orchestrate virtual machines (VMs) in cloud environments.
- C. They are used for data storage in cloud environments.
- D. They serve as a template manager for software applications and services.

Answer: A

Explanation:

Containers encapsulate applications and their dependencies into lightweight, portable units that can run consistently across multiple environments. This abstraction supports cloud-native development by enabling microservices architectures, rapid deployment, and scaling within orchestration platforms like Kubernetes. Containers accelerate cloud migration by decoupling applications from infrastructure, facilitating automation, and continuous integration/continuous deployment (CI/CD) workflows. Palo Alto Networks addresses container security by integrating runtime protection, vulnerability scanning, and compliance enforcement within its Prisma Cloud platform, ensuring safe adoption of cloud-native tools and methodologies.

NEW QUESTION # 36

Which tool's analysis data gives security operations teams insight into their environment's risks from exposed services?

- A. IIDP
- B. Xpanse
- C. SIM
- D. IAM

Answer: B

Explanation:

Xpanse is a tool from Palo Alto Networks that provides attack surface management by analyzing exposed services and internet-facing assets, giving security operations teams visibility into environmental risks and helping prioritize remediation of vulnerabilities.

NEW QUESTION # 37

Which endpoint protection security option can prevent malware from executing software?

- A. DNS Security
- B. URL filtering
- C. Dynamic access control
- **D. Application allow list**

Answer: D

Explanation:

An application allow list prevents malware from executing by only permitting approved applications to run on an endpoint. Any unauthorized or unknown software, including malicious programs, is automatically blocked from executing.

NEW QUESTION # 38

Which statement describes a host-based intrusion prevention system (HIPS)?

- A. It analyzes network traffic to detect unusual traffic flows and new malware.
- B. It scans a Wi-Fi network for unauthorized access and removes unauthorized devices.
- C. It is placed as a sensor to monitor all network traffic and scan for threats.
- **D. It is installed on an endpoint and inspects the device.**

Answer: D

Explanation:

A Host-Based Intrusion Prevention System (HIPS) is installed directly on an endpoint device (such as a server or workstation) and monitors local system activity, including processes, file access, and system calls, to detect and prevent malicious behavior.

NEW QUESTION # 39

.....

With the help of PCCP guide questions, you can conduct targeted review on the topics which to be tested before the exam, and then you no longer have to worry about the problems that you may encounter a question that you are not familiar with during the exam. With PCCP Learning Materials, you will not need to purchase any other review materials. Please be assured that with the help of PCCP learning materials, you will be able to successfully pass the exam.
