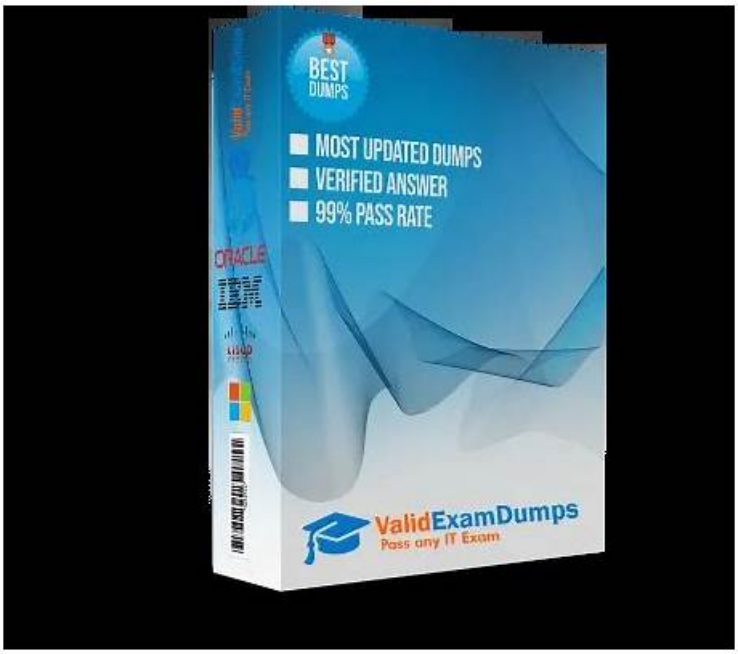
PCCP Exam Valid Study Guide- Perfect PCCP Latest Exam Vce Pass Success



BTW, DOWNLOAD part of DumpTorrent PCCP dumps from Cloud Storage: https://drive.google.com/open?id=1oOHW9aTe1qA9riWDpLxSwvynJBvTTHDE

Good opportunities are always for those who prepare themselves well. You should update yourself when you are still young. Our PCCP study materials might be a good choice for you. The contents of our study materials are the most suitable for busy people. You can have a quick revision of the PCCP study materials in your spare time. Also, you can memorize the knowledge quickly. There almost have no troubles to your normal life. You can make use of your spare moment to study our PCCP Study Materials. The results will become better with your constant exercises. Please have a brave attempt.

Palo Alto Networks PCCP Exam Syllabus Topics:

Topic	Details
Topic 1	• Endpoint Security: This domain is aimed at an Endpoint Security Analyst and covers identifying indicators of compromise (IOCs) and understanding the limits of signature-based anti-malware. It includes concepts like User and Entity Behavior Analytics (UEBA), endpoint detection and response (EDR), and extended detection and response (XDR). It also describes behavioral threat prevention and endpoint security technologies such as host-based firewalls, intrusion prevention systems, device control, application control, disk encryption, patch management, and features of Cortex XDR.
Topic 2	• Secure Access: This part of the exam measures skills of a Secure Access Engineer and focuses on defining and differentiating Secure Access Service Edge (SASE) and Secure Service Edge (SSE). It covers challenges related to confidentiality, integrity, and availability of data and applications across data, private apps, SaaS, and AI tools. It examines security technologies including secure web gateways, enterprise browsers, remote browser isolation, data loss prevention (DLP), and cloud access security brokers (CASB). The section also describes Software-Defined Wide Area Network (SD-WAN) and Prisma SASE solutions such as Prisma Access, SD-WAN, AI Access, and enterprise DLP.

Topic 3	• Network Security: This domain targets a Network Security Specialist and includes knowledge of Zero Trust Network Access (ZTNA) characteristics, functions of stateless and next-generation firewalls (NGFWs), and the purpose of microsegmentation. It also covers common network security technologies such as intrusion prevention systems (IPS), URL filtering, DNS security, VPNs, and SSL • TLS decryption. Candidates must understand the limitations of signature-based protection, deployment options for NGFWs, cybersecurity concerns in operational technology (OT) and IoT, cloud-delivered security services, and AI-powered security functions like Precision AI.

High-quality PCCP Valid Study Guide & Useful PCCP Latest Exam Vce Ensure You a High Passing Rate

The PDF format is designed to use on laptops, tablets, and smartphones. It is an ideal format to prepare for the Palo Alto Networks Certified Cybersecurity Practitioner (PCCP) certification exam anywhere anytime. The customers can even store the PCCP Practice Test material in the form of printed notes because the PDF file is printable.

Palo Alto Networks Certified Cybersecurity Practitioner Sample Questions (Q66-Q71):

NEW QUESTION # 66
Which security function enables a firewall to validate the operating system version of a device before granting it network access?

- A. Identity Threat Detection and Response (ITDR)
- B. Sandboxing
- C. Host intrusion prevention system (HIPS)
- D. Stateless packet inspection

Answer: C

Explanation:
Host Intrusion Prevention Systems (HIPS) operate on endpoints to enforce security policies by monitoring system calls, file integrity, and configuration settings. HIPS can validate device compliance, including operating system versions and patch levels, before permitting network access. This capability prevents vulnerable or outdated devices from becoming attack vectors. Palo Alto Networks integrates HIPS functionalities in its endpoint security solutions, providing granular control to enforce organizational security standards and reduce risk from non-compliant endpoints. Unlike network-based inspection, HIPS works locally on hosts to stop threats at their origin.

NEW QUESTION # 67
Which type of firewall should be implemented when a company headquarters is required to have redundant power and high processing power?

- A. Physical
- B. Cloud
- C. Virtual
- D. Containerized

Answer: A

Explanation:
A physical firewall is ideal for environments like a company headquarters that require redundant power, high throughput, and dedicated hardware for maximum reliability and performance. It supports more robust failover and scalability compared to virtual or containerized options.

NEW QUESTION # 68
What is an operation of an Attack Surface Management (ASM) platform?

- A. It continuously identifies all internal and external internet-connected assets for potential attack vectors and exposures.
- B. It identifies and monitors the movement of data within, into, and out of an organization's network.
- C. It detects and remediates misconfigured security settings in sanctioned SaaS applications through monitoring.
- D. It scans assets in the cloud space for remediation of compromised sanctioned SaaS applications.

Answer: A

Explanation:
Attack Surface Management (ASM) platforms focus on continuous discovery and monitoring of all internet-facing assets, both internal and external, to identify attack vectors, vulnerabilities, and exposures that could be exploited by threat actors.

NEW QUESTION # 69
What are two capabilities of identity threat detection and response (ITDR)? (Choose two.)

- A. Matching risks to signatures
- B. Securing individual devices
- C. Analyzing access management logs
- D. Scanning for excessive logins

Answer: C,D

Explanation:
Scanning for excessive logins - ITDR identifies suspicious patterns such as unusual or excessive login attempts, which may indicate credential abuse.
Analyzing access management logs - ITDR tools analyze identity-related logs, including authentication and authorization events, to detect threats tied to user behavior and access anomalies.
Device security and signature matching are not core functions of ITDR; they fall under endpoint protection and traditional threat detection respectively.

NEW QUESTION # 70
Which type of system collects data and uses correlation rules to trigger alarms?

- A. SOAR
- B. SIM
- C. SIEM
- D. UEBA

Answer: C

Explanation:
A Security Information and Event Management (SIEM) system collects data from various sources (logs, events, etc.) and uses correlation rules to analyze this data and trigger alarms when suspicious or predefined patterns are detected.
