Python Institute PCEP-30-02: PCEP - Certified Entry-Level Python Programmer test questions - Lead2pass pass exam

We have special online worker to solve all your problems. Once you have questions about our PCEP-30-02 latest exam guide, you can directly contact with them through email. We are 7*24*365 online service. We are welcome you to contact us any time via email or online service. We have issued numerous products, so you might feel confused about which PCEP-30-02 Study Dumps suit you best. You will get satisfied answers after consultation.

Python Institute PCEP - Certified Entry-Level Python Programmer Sample Questions (Q28-Q33):

NEW QUESTION # 28

Drag and drop the conditional expressions to obtain a code which outputs * to the screen.
(Note: some code boxes will not be used.)

pool == 0

pool < 0

pool = 0

pool > 0

```
pool = 42 - 1 // 2
if :
    print("*")
elif :
    print("***")
else:
    print("****")
```

Answer:

Explanation:

pool == 0

pool < 0

pool = 0

pool > 0

```
pool = 42 - 1 // 2
 pool > 0
    print("*")
 pool < 0
    print("***")
else:
    print("****")
```

Explanation:

pool = 0

pool == 0

```
pool = 42 - 1 // 2
if  pool == 0:
    print("*")
elif  pool < 0:
    print("***")
else:
    print("****")
```

One possible way to drag and drop the conditional expressions to obtain a code which outputs * to the screen is:

```
if pool > 0:  
    print("*")  
elif pool < 0:  
    print("**")  
else:  
    print("***")
```

This code uses the if, elif, and else keywords to create a conditional statement that checks the value of the variable pool. Depending on whether the value is greater than, less than, or equal to zero, the code will print a different pattern of asterisks to the screen. The print function is used to display the output. The code is indented to show the blocks of code that belong to each condition. The code will output * if the value of pool is positive, ** if the value of pool is negative, and *** if the value of pool is zero.

You can find more information about the conditional statements and the print function in Python in the following references:

- * [Python If ... Else]
- * [Python Print Function]
- * [Python Basic Syntax]

NEW QUESTION # 29

Arrange the code boxes in the correct positions in order to obtain a loop which executes its body with the level variable going through values 5, 1, and 1 (in the same order).

0, range (-2 level in for) 5,

PYTHON INSTITUTE
Open Education & Development Group

Answer:

Explanation:

0, range (-2 level in for) 5,

for level in range (5, 0, -2)

PYTHON INSTITUTE
Open Education & Development Group

for level in range (5, 0, -2)

NEW QUESTION # 30

What is the expected output of the following code?

PYTHON INSTITUTE
Open Education & Development Group

```
def traverse(stop):
    if stop == 0:
        return 0
    else:
        return stop + traverse(stop - 1)

print(traverse(2))
```

- A. 0
- **B. 1**
- C. 2
- D. 3

Answer: B

Explanation:

Explanation

The code snippet that you have sent is using the count method to count the number of occurrences of a value in a list. The code is as follows:

```
my_list = [1, 2, 3, 4, 5] print(my_list.count(1))
```

The code starts with creating a list called "my_list" that contains the numbers 1, 2, 3, 4, and 5. Then, it uses the print function to display the result of calling the count method on the list with the argument 1. The count method is used to return the number of times a value appears in a list. For example, my_list.count(1) returns 1, because 1 appears once in the list.

The expected output of the code is 1, because the code prints the number of occurrences of 1 in the list.

Therefore, the correct answer is D. 1.

NEW QUESTION # 31

Assuming that the phone_dir dictionary contains namenumbers pairs, arrange the code boxes to create a valid line of code which retrieves Martin Eden's phone number, and assigns it to the number variable.

PYTHON INSTITUTE
Open Education & Development Group

1

number

"Martin Eden"

phone_dir

=

Answer:

Explanation:

Explanation:

`number = phone_dir["Martin Eden"]`

This code uses the square brackets notation to access the value associated with the key "Martin Eden" in the `phone_dir` dictionary. The value is then assigned to the variable `number`. A dictionary is a data structure that stores key-value pairs, where each key is unique and can be used to retrieve its corresponding value. You can find more information about dictionaries in Python in the following references:

- * [Python Dictionaries - W3Schools]
- * [Python Dictionary (With Examples) - Programiz]
- * [5.5. Dictionaries - How to Think Like a Computer Scientist ...]

NEW QUESTION # 32

A program written in a high-level programming language is called:

- A. a source code
- B. machine code
- C. a binary code
- D. the ASCII code

Answer: A

NEW QUESTION # 33

.....

In the process of using the PCEP-30-02 study training materials, once users have any questions about our study materials, the user can directly by E-mail us, our products have a dedicated customer service staff to answer for the user, they are 24 hours service for you, we are very welcome to contact us by E-mail and put forward valuable opinion for us. Our PCEP-30-02 Latest Questions already have three different kinds of learning materials, what is the most suitable PCEP-30-02 test guide for you? You can just follow the instructions for PCEP-30-02 study guide on the web or ask our services about it.
