Wollen Sie die Fragenkataloge zur PCI SSC QSA_New_V4 Zertifizierungsprüfung haben, die Ihre Zeit und Energie sparen können? Dann wählen Sie Pass4Test. Unsere Fragenkataloge für PCI SSC QSA_New_V4 Zertifizierungsprüfung werden Ihnen einjähriger Aktualisierung kostenlos bieten, damit Sie die neulich aktualisierten Informationen über PCI SSC QSA_New_V4 Zertifizierungsprüfung erhalten können. Wir versprechen Ihnen, dass wir Ihnen alle Ihre bezahlten Summe zurückgeben werden, wenn Sie die Zertifizierungsprüfung nicht bestehen, nachdem Sie unsere Produkte gekauft haben.

PCI SSC QSA_New_V4 Prüfungsplan:

Thema	Einzelheiten
Thema 1	• PCI DSS Testing Procedures: This section of the exam measures the skills of PCI Compliance Auditors and covers the testing procedures required to assess compliance with the Payment Card Industry Data Security Standard (PCI DSS). Candidates must understand how to evaluate security controls, identify vulnerabilities, and ensure that organizations meet compliance requirements. One key skill evaluated is assessing security measures against PCI DSS standards.
Thema 2	• PCI Reporting Requirements: This section of the exam measures the skills of Risk Management Professionals and covers the reporting obligations associated with PCI DSS compliance. Candidates must be able to prepare and submit necessary documentation, such as Reports on Compliance (ROCs) and Self-Assessment Questionnaires (SAQs). One critical skill assessed is compiling and submitting accurate PCI compliance reports.
Thema 3	• PCI Validation Requirements: This section of the exam measures the skills of Compliance Analysts and evaluates the processes involved in validating PCI DSS compliance. Candidates must understand the different levels of merchant and service provider validation, including self-assessment questionnaires and external audits. One essential skill tested is determining the appropriate validation method based on business type.

Thema 4	• Payment Brand Specific Requirements: This section of the exam measures the skills of Payment Security Specialists and focuses on the unique security and compliance requirements set by different payment brands, such as Visa, Mastercard, and American Express. Candidates must be familiar with the specific mandates and expectations of each brand when handling cardholder data. One skill assessed is identifying brand-specific compliance variations.
Thema 5	• Real-World Case Studies: This section of the exam measures the skills of Cybersecurity Consultants and involves analyzing real-world breaches, compliance failures, and best practices in PCI DSS implementation. Candidates must review case studies to understand practical applications of security standards and identify lessons learned. One key skill evaluated is applying PCI DSS principles to prevent security breaches.

PCI SSC QSA_New_V4 Zertifizierungsprüfung - QSA_New_V4 Fragen Antworten

Fühlen Sie sich nicht selbstbewusst, die PCI SSC QSA_New_V4 Zertifizierungsprüfung zu bestehen? Fürchten Sie bitte nicht, weil wir Pass4Test die beste Prüfungsunterlagen anbieten können. Die PCI SSC QSA_New_V4 Dumps von Pass4Test sind die neuesten und vollständigsten Prüfungsunterlagen in dem Markt. Damit können Sie mehr selbstbewusst werden. Das sind von vielen Leuten geprüft.

PCI SSC Qualified Security Assessor V4 Exam QSA_New_V4 Prüfungsfragen mit Lösungen (Q59-Q64):

59. Frage

An entity is using custom software in their CDE. The custom software was developed using processes that were assessed by a Secure Software Lifecycle assessor and found to be fully compliant with the Secure SLC standard. What impact will this have on the entity's PCI DSS assessment?

- **A. It may help the entity to meet several requirements in Requirement 6.**
- B. The custom software can be excluded from the PCI DSS assessment.
- C. It automatically makes an entity PCI DSS compliant.
- D. There is no impact to the entity.

Antwort: A

Begründung:

The Secure Software Lifecycle (SLC) Standard is part of PCI's Software Security Framework (SSF). If an entity's software is developed under a PCI-recognised Secure SLC process, it may satisfy parts of Requirement 6, especially around secure coding practices and vulnerability management.

* Option A#Incorrect. SLC compliance alone doesn't grant full PCI DSS compliance.

* Option B#Correct. Secure SLC can help meet many of the development-related controls.

* Option C#Incorrect. There is impact- potentially reducing scope/testing.

* Option D#Incorrect. The software remains in scope, but fewer controls may need to be separately validated.

Reference: PCI DSS v4.0.1 - Requirement 6, and Appendix F: PCI Software Security Framework Reference.

60. Frage

A sample of business facilities is reviewed during the PCI DSS assessment. What is the assessor required to validate about the sample?

- A. Every facility where cardholder data is stored is reviewed.
- B. It includes a consistent set of facilities that are reviewed for all assessments.
- **C. All types and locations of facilities are represented.**
- D. The number of facilities in the sample is at least 10 percent of the total number of facilities.

Antwort: C

Begründung:

Per Section 6 - Sampling for PCI DSS Assessments, the assessor must ensure the sample of business facilities includes all types and locations, reflecting different operational environments. The goal is to cover variations that might affect compliance, such as data centers vs. call centers, or regional differences.

- * Option A: Incorrect. Each assessment may require a different sample depending on the environment.
- * Option B: Incorrect. There is no fixed 10% requirement for facility sampling.
- * Option C: Incorrect. A full review of every facility isn't required if representative sampling is used appropriately.
- * Option D: Correct. The sampling must include all types and locations of facilities to be valid.

Reference: PCI DSS v4.0.1 - Section 6: Sampling for PCI DSS Assessments.

61. Frage

Which of the following describes "stateful responses" to communication initiated by a trusted network?

- **A. Active network connections are tracked so that invalid "response" traffic can be identified.**
- B. A current baseline of application configurations is maintained and any misconfiguration is responded to promptly.
- C. Logs of user activity on the firewall are correlated to identify and respond to suspicious behavior.
- D. Administrative access to respond to requests to change the firewall is limited to one individual at a time.

Antwort: A

Begründung:

Stateful inspection (or stateful packet filtering) tracks the state of active connections and determines which packets are part of a valid session. Requirement 1.4.2 references the use of network security controls (NSCs) with stateful filtering capability to allow legitimate traffic only in response to trusted requests.

- * Option A: Incorrect. Firewall admin procedures are not what "stateful" refers to.
- * Option B: Correct. "Stateful responses" mean tracking existing connections to block unauthorised or spoofed responses.
- * Option C: Incorrect. That describes configuration management, not stateful filtering.
- * Option D: Incorrect. Logging is important but not part of stateful inspection.

62. Frage

Which scenario meets PCI DSS requirements for critical systems to have correct and consistent time?

- A. Access to time configuration settings is available to all users of the system.
- B. Each internal system is configured to be its own time server.
- C. Each internal system peers directly with an external source to ensure accuracy of time updates.
- **D. Central time servers receive time signals from specific, approved external sources.**

Antwort: D

Begründung:

Per Requirement 10.6.1, PCI DSS mandates that time-synchronization technology be used, and systems must be synchronized to a central time server that itself receives time from an approved external source. This ensures logs can be accurately correlated.

- * Option A: Incorrect. Time inconsistency arises if each system operates independently.
- * Option B: Incorrect. Time configuration must be restricted to authorised personnel only.
- * Option C: Correct. Time should be sourced from a centralised server which is in sync with reliable external sources.
- * Option D: Incorrect. Each system peering independently can cause inconsistencies.

Reference: PCI DSS v4.0.1 - Requirement 10.6.1.1.

63. Frage

Which scenario describes segmentation of the cardholder data environment (CDE) for the purposes of reducing PCI DSS scope?

- A. Virtual LANs that route network traffic between the CDE and out-of-scope networks.
- B. Firewalls that log all network traffic flows between the CDE and out-of-scope networks.
- C. Routers that monitor network traffic flows between the CDE and out-of-scope networks.
- **D. A network configuration that prevents all network traffic between the CDE and out-of-scope networks.**

Antwort: D

Begründung:

True segmentation, as defined in PCI DSS Scope Guidance, requires enforcing isolations such that no network traffic is allowed between the CDE and out-of-scope systems, unless explicitly permitted and secured. This is the only way to reduce assessment scope reliably.

- * Option A#Incorrect. Monitoring alone does not restrict or prevent access.
- * Option B#Incorrect. Logging without restriction doesn't isolate the CDE.
- * Option C#Incorrect. VLANs may be part of segmentation, but routing traffic alone doesn't reduce scope.
- * Option D#Correct. This describes proper segmentation: no uncontrolled traffic into the CDE.

Reference:PCI DSS v4.0.1 - Section 4.2;Guidance on Scoping and Network Segmentation- Section 3.1 and 3.2.

64. Frage
