Palo Alto Networks - PCNSE High Hit-Rate Reliable Test Forum

Even in a globalized market, the learning material of similar PCNSE doesn't have much of a share, nor does it have a high reputation or popularity. In this dynamic and competitive market, the PCNSE learning questions can be said to be leading and have absolute advantages. In order to facilitate the user real-time detection of the learning process, we PCNSE Exam Material provideds by the questions and answers are all in the past.it is closely associated, as our experts in constantly update products every day to ensure the accuracy of the problem, so all PCNSE practice materials are high accuracy.

Certification Path

PCNSE is an advanced exam and PCNSA - Palo Alto Networks Certified Network Security Administrator is a prerequisite for this Palo Alto Networks PCNSE Exam.

Palo Alto Networks Certified Network Security Engineer Exam Sample Questions (Q125-Q130):

NEW QUESTION # 125
An engineer reviews high availability (HA) settings to understand a recent HA failover event Review the screenshot below.

Election Settings

Device Priority: 100

☑ Preemptive
☐ Heartbeat Backus

HA Timer Settings: Advanced
Promotion Hold Time (ms): 2000
Hello Interval (ms): 8000
Heartbeat Interval (ms): 2000
Flap Max: 3
Preemption Hold Time (min): 1
Monitor Fail Hold Up Time (ms): 0
Additional Master Hold Up Time (ms): 500

Load Recommended
Load Aggressive

OK   Cancel

Which tuner determines how long the passive firewall will wart before taking over as the active firewall after losing communications with the HA peer?

- A. Additional Master Hold Up Time
- B. Heartbeat Interval
- C. Monitor Fail Hold Up Time
- D. Promotion Hold Time

Answer: D

NEW QUESTION # 126

Using multiple templates in a stack to manage many firewalls provides which two advantages? (Choose two.)

- A. inherit address-objects from templates
- B. standardize log-forwarding profiles for security polices across all stacks
- C. standardize server profiles and authentication configuration across all stacks
- D. define a common standard template configuration for firewalls

Answer: C,D

Explanation:
Explanation
Using multiple templates in a stack to manage many firewalls provides the advantages of defining a common standard template configuration for firewalls and standardizing server profiles and authentication configuration across all stacks. A template stack is a container for multiple templates that you can assign to firewalls and firewall groups. The templates in a stack are prioritized so that the settings in a higher-priority template override the same settings in a lower-priority template. This allows you to create a hierarchy of templates that define common settings for all firewalls and specific settings for different groups of firewalls.

NEW QUESTION # 127

A network security engineer needs to ensure that virtual systems can communicate with one another within a Palo Alto Networks firewall. Separate virtual routers (VRs) are created for each virtual system.
In addition to confirming security policies, which three configuration details should the engineer focus on to ensure communication between virtual systems? (Choose three.)

- A. Add a route with next hop next-vr by using the VR configured in the virtual system.
- B. Ensure the virtual systems are visible to one another.
- C. Layer 3 zones for the virtual systems that need to communicate.
- D. Add a route with next hop set to none, and use the interface of the virtual systems that need to communicate.
- E. External zones with the virtual systems added.

Answer: A,B,E

Explanation:
Step 1: Make vsys visible to each other

Step 2: create external zone on each vsys and make it visible for another vsys Step 3: if you need routing via another vsys, create route with next-vr as a next hop (if independent virtual routers are used in each vsys)

NEW QUESTION # 128

Ethernet1/1 has been configured with the following subinterfaces:

Interface	Interface Type	Management Profile	Link State	IP Address	Virtual Router	Tag	Security Zone
ethernet1/1	Layer3	pingsshhttpssnmp		none	none	Untagged	none
ethernet1/1.798	Layer3			10.10.30.1/24	VR1	798	none
ethernet1/1.799	Layer3			10.10.30.1/24	default	799	none
ethernet1/1.801	Layer3			10.10.30.1/24	VR1	801	none

The following security policy rule is applied:

	Name	Tags	Source				Destination		Application	Service	Action	Profile	Options
			Zone	Address	User	HIP Profile	Zone	Address					
1	Allow all	798 799 801	any	any	any	any	any	any	any	any	✓	none	

The Interface Management Profile permits the following:

Name pingsshhttpssnmp

Permitted Services
- ☑ Ping
- ☐ Telnet
- ☑ SSH
- ☐ HTTP OCSP
- ☑ HTTPS
- ☑ SNMP
- ☐ Response Pages
- ☐ User-ID
- ☐ User-ID Syslog Listener-SSL
- ☐ User-ID Syslog Listener-UDP

Permitted IP Addresses

➕ Add ➖ Delete

Ex. IPv4 192.168.1.1 or 192.168.1.0/24 or IPv6 2001:db8:123:1::1 or 2001:db8:123:1::/64

OK   Cancel

A customer is trying to ping 10.10.10.1 from VLAN 799 IP 10.10.10.2/24.
What will be the result of this ping?

- A. The ping will not be successful because there is no management profile attached to ethernet1/1.799.
- B. The ping will not successful because the management profile applied to ethernet1/1 allows ping.
- C. The ping will not be successful because the security policy does not apply to VLAN 799.
- D. The ping will not successful because the security policy permits this traffic.
- E. The ping will not be successful because the virtual router is different from the other subinterfaces.

Answer: A

NEW QUESTION # 129

A
users traffic traversing a Palo Alto networks NGFW sometimes can reach http //www company com At other times the session times out. At other times the session times out The NGFW has been configured with a PBF rule that the user traffic matches when it goes to http://www.company.com goes to http://www company com How can the firewall be configured to automatically disable the PBF rule if the next hop goes down?

- A. Create and add a monitor profile with an action of wait recover in the PBF rule in question
- B. Create and add a monitor profile with an action of fail over in the PBF rule in question
- C. Configure path monitoring for the next hop gateway on the default route in the virtual router
- D. Enable and configure a link monitoring profile for the external interface of the firewall

Answer: C
