PCNSE Reliable Test Price & Valid PCNSE Exam Simulator

The software version of the PCNSE exam reference guide is very practical. This version has helped a lot of customers pass their exam successfully in a short time. The most important function of the software version is to help all customers simulate the real examination environment. If you choose the software version of the PCNSE Test Dump from our company as your study tool, you can have the right to feel the real examination environment. In addition, the software version is not limited to the number of the computer. So hurry to buy the PCNSE study question from our company.

Palo Alto Networks Certified Network Security Engineer Exam Sample Questions (Q83-Q88):

NEW QUESTION # 83

A firewall engineer has determined that, in an application developed by the company's internal team, sessions often remain idle for hours before the client and server exchange any data. The application is also currently identified as unknown-tcp by the firewalls. It is determined that because of a high level of trust, the application does not require to be scanned for threats, but it needs to be properly identified in Traffic logs for reporting purposes.

Which solution will take the least time to implement and will ensure the App-ID engine is used to identify the application?

- A. Create a custom application with specific timeouts, then create an application override rule and reference the custom application.
- B. Access the Palo Alto Networks website and raise a support request through the Customer Support Portal.
- C. Create a custom application with specific timeouts and signatures based on patterns discovered in packet captures.
- D. Access the Palo Alto Networks website and complete the online form to request that a new application be added to App-ID.

Answer: A

Explanation:

For an application that is currently identified as unknown-tcp and has sessions that often remain idle for long periods, creating a custom application and using an application override rule is the most time-efficient solution.

C: The process involves:

* Creating a custom application in the Palo Alto Networks firewall and configuring it with specific timeouts to accommodate the application's idle session behavior. This step ensures that the firewall does not prematurely close the application's sessions due to inactivity.

* Next, creating an application override rule that references the custom application. This rule directs the firewall to identify traffic matching the rule criteria (such as source, destination, and port information) as

* the custom application, bypassing the App-ID engine's regular identification process.

This approach allows for the quick implementation of a solution that ensures the application is properly identified in traffic logs without undergoing threat scanning, meeting the requirements for both identification and reporting.

NEW QUESTION # 84

An engineer is monitoring an active/active high availability (HA) firewall pair.

Which HA firewall state describes the firewall that is experiencing a failure of a monitored path?

- A. Passive
- B. Initial
- C. Active-secondary
- D. Tentative

Answer: D

Explanation:

<https://docs.paloaltonetworks.com/pan-os/9-1/pan-os-admin/high-availability/ha-firewall-states>

State of a firewall (in an active/active configuration) caused by one of the following:

Failure of a firewall.

Failure of a monitored object (a link or path).

The firewall leaves suspended or non-functional state.

NEW QUESTION # 85

A customer has an application that is being identified as unknown-tcp for one of their custom PostgreSQL database connections.

Which two configuration options can be used to correctly categorize their custom database application? (Choose two.)

- A. Custom Service object.
- B. Application Override policy.
- C. Custom application.
- D. Security policy to identify the custom application.

Answer: B,C

NEW QUESTION # 86

A firewall administrator has configured User-ID and deployed GlobalProtect, but there is no User- ID showing in the traffic logs. How can the administrator ensure that User-IDs are populated in the traffic logs?

- A. Create a Group Mapping for the GlobalProtect Group.
- B. Add the users to the proper Dynamic User Group.
- C. Enable Captive Portal on the expected source interfaces.
- **D. Enable User-ID on the expected trusted zones.**

Answer: D

Explanation:

For User-ID information to show up in the traffic logs, it needs to be properly configured and enabled in the trusted zones where users are authenticated. The firewall needs to gather User- ID information from the sources within these zones (such as the domain controllers, etc.). By enabling User-ID on the expected zones, the firewall can map users to their respective IP addresses and populate the User-ID in the traffic logs.

NEW QUESTION # 87

During the implementation of SSL Forward Proxy decryption, an administrator imports the company's Enterprise Root CA and Intermediate CA certificates onto the firewall. The company's Root and Intermediate CA certificates are also distributed to trusted devices using Group Policy and GlobalProtect. Additional device certificates and/or Subordinate certificates requiring an Enterprise CA chain of trust are signed by the company's Intermediate CA. Which method should the administrator use when creating Forward Trust and Forward Untrust certificates on the firewall for use with decryption?

- **A. Generate a CA certificate for Forward Trust and a self-signed CA for Forward Untrust.**
- B. Generate a single subordinate CA certificate for both Forward Trust and Forward Untrust.
- C. Generate two subordinate CA certificates, one for Forward Trust and one for Forward Untrust.
- D. Generate a single self-signed CA certificate for Forward Trust and another for Forward Untrust

Answer: A

NEW QUESTION # 88

.....

With three versions of products, our PCNSE learning questions can satisfy different taste and preference of customers with different use: PDF & Software & APP versions. Without ambiguous points of questions make you confused, our PCNSE practice materials can convey the essence of the content suitable for your exam. With our PCNSE exam guide, you will achieve what you are expecting with ease.

PCNSE Reliable Test Price: <https://www.fast2test.com/PCNSE-premium-file.html>

The PCNSE learning dumps from our company are very convenient for all people, including the convenient buying process, the download way and the study process and so on. Our staff will create a unique study plan for you based on the choice of the right version of the PCNSE exam questions. You will find everything you need to overcome the difficulty of PCNSE prep4sure vce, once you select our valid PCNSE dumps torrent as your study materials, you will not only pass Palo Alto Networks Certified Network Security Engineer Exam prep4sure test easily and consolidate your expertise, but also have access to the one-year free update PCNSE dumps pdf service. If you want to pass exam ahead of others, stop hesitating, just choose our reliable PCNSE study guide now.

Although both a standalone deployment and a single server PCNSE Reliable Test Notes deployment make use of one single SharePoint server, there are key differences between the two deployment types.

Although the machine language of a computer is easy to understand, its use results in vast quantities of numeric data that have little meaning. The PCNSE learning dumps from our company are very convenient for PCNSE all people, including the convenient buying process, the download way and the study process and so on.
