Our PCNSE learning guide allows you to study anytime, anywhere. If you are concerned that your study time cannot be guaranteed, then our PCNSE learning guide is your best choice because it allows you to learn from time to time and make full use of all the time available for learning. Our PCNSE learning guide is for the world and users are very extensive. In order to give users a better experience, we have been constantly improving. The high quality and efficiency of PCNSE Test Guide has been recognized by users. The high passing rate of PCNSE exam training is its biggest feature. As long as you use PCNSE test guide, you can certainly harvest what you want thing.

Palo Alto Networks PCNSE (Palo Alto Networks Certified Security Engineer) certification exam is a highly respected and sought-after credential in the cybersecurity industry. Palo Alto Networks Certified Network Security Engineer Exam certification is designed for security professionals who are responsible for deploying, managing, and operating Palo Alto Networks Next-Generation Firewalls and associated technologies. Palo Alto Networks Certified Network Security Engineer Exam certification exam validates the skills and knowledge necessary to implement and manage the Palo Alto Networks Next-Generation Firewall and Panorama management server in complex network environments.

Accurate PCNSE Practice Engine gives you high-effective Exam Quiz - ExamsTorrent

If you don't prepare with real PCNSE questions, you fail, lose time and money. ExamsTorrent product is specially designed to help you pass the exam on the first try. The study material is easy to use. You can choose from 3 different formats available according to your needs. The 3 formats are Palo Alto Networks PCNSE desktop practice test software, browser based practice exam, and PDF.

Palo Alto Networks Certified Network Security Engineer Exam Sample Questions (Q299-Q304):

NEW QUESTION # 299

A user at an internal system queries the DNS server for their web server with a private IP of 10.250.241.131 in the webserver.

The DNS server returns an address of the web server's public address 200.1.1.10.

In order to reach the web server, which security rule and U-Turn NAT rule must be configured on the firewall?

- A. NAT Rule:
Source Zone: Untrust_L3
Source IP: Any
Destination Zone: DMZ
Destination IP: 200.1.1.10
Destination Translation address: 10.250.241.131
Security Rule:
Source Zone: Trust-L3
Source IP: Any
Destination Zone: DMZ
Destination IP: 10.250.241.131

- B. NAT Rule:
Source Zone: Trust-L3
Source IP: Any
Destination Zone: Untrust_L3
Destination IP: 200.1.1.10
Destination Translation address: 10.250.241.131
Security Rule:
Source Zone: Trust-L3
Source IP: Any
Destination Zone: DMZ
Destination IP: 200.1.1.10

- C. NAT Rule:
Source Zone: Trust-L3
Source IP: Any
Destination Zone: DMZ
Destination IP: 200.1.1.10
Destination Translation address: 10.250.241.131
Security Rule:
Source Zone: Untrust-L3
Source IP: Any
Destination Zone: DMZ
Destination IP: 10.250.241.131

- D. NAT Rule:
Source Zone: Untrust_L3
Source IP: Any
Destination Zone: Untrust_L3
Destination IP: 200.1.1.10
Destination Translation address: 10.250.241.131
Security Rule:
Source Zone: Untrust-L3
Source IP: Any
Destination Zone: DMZ
Destination IP: 10.250.241.131

Answer: B

NEW QUESTION # 300

A user at an external system with the IP address 65.124.57.5 queries the DNS server at 4.2.2.2 for the IP address of the web server, www.xyz.com. The DNS server returns an address of 172.16.15.1.

In order to reach the web server, which Security rule and NAT rule must be configured on the firewall?

- A. NAT Rule:
Untrust-L3 (any) - Trust-L3 (172.16.15.1) Destination Translation: 192.168.15.47 Security Rule:
Untrust-L3 (any) - Trust-L3 (172.16.15.1) - Application: Web-browsing
- B. NAT Rule:
Untrust-L3 (any) - Untrust-L3 (172.16.15.1) Destination Translation: 192.168.15.47 Security Rule:
Untrust-L3 (any) - Trust-L3 (172.16.15.1) - Application: Web-browsing
- C. NAT Rule:
Untrust-L3 (any) - Untrust-L3 (any) Destination Translation: 192.168.15.1 Security Rule:
Untrust-L3 (any) - Trust-L3 (172.16.15.1) - Application: Web-browsing
- D. NAT Rule:
Untrust-L3 (any) - Trust-L3 (172.16.15.1) Destination Translation: 192.168.15.47 Security Rule:
Untrust-L3 (any) - Trust-L3 (192.168.15.47) - Application: Web-browsing

Answer: B

Explanation:

The addresses used in destination NAT rules always refer to the original IP address in the packet (that is, the pre-translated address). The destination zone in the NAT rule is determined after the route lookup of the destination IP address in the original packet (that is, the pre-NAT destination IP address).

The addresses in the security policy also refer to the IP address in the original packet (that is, the pre-NAT address). However, the destination zone is the zone where the end host is physically connected. In other words, the destination zone in the security rule is determined after the route lookup of the post-NAT destination IP address.

NEW QUESTION # 301

An auditor is evaluating the configuration of Panorama and notices a discrepancy between the Panorama template and the local firewall configuration.

When overriding the firewall configuration pushed from Panorama, what should you consider?

- A. Only Panorama can revert the override.
- B. The firewall template will show that it is out of sync within Panorama.
- C. Panorama will update the template with the overridden value.
- D. The modification will not be visible in Panorama.

Answer: D

Explanation:

When managing firewalls with Panorama, configurations can be pushed from Panorama templates to managed firewalls. However, there are scenarios where specific settings need to be overridden on the local firewall level due to unique requirements or exceptions.

B: The modification will not be visible in Panorama:

* When an override is made directly on the firewall, this change is not automatically reflected back in Panorama's templates or device groups. The local configuration on the firewall will take precedence over the Panorama pushed configuration for the overridden settings, but these local changes will not be visible in the Panorama interface. This means that while Panorama maintains central control and visibility over the bulk of the configuration, it does not have visibility into local overrides made directly on the firewalls.

This distinction is crucial for auditors and administrators to understand, as it impacts how configurations are managed and synchronized between Panorama and the individual firewalls. Local overrides provide flexibility but require careful management to ensure consistency and compliance with security policies.

NEW QUESTION # 302

Which CLI command enables an administrator to view details about the firewall including uptime, PAN-OS version, and serial number?

- A. show system details
- B. show session info
- C. show system info
- D. debug system details

Answer: C

Explanation:
