If your answer is yes then you need to start Channel Partner Program ACD201 test preparation with Appian ACD201 PDF Questions and practice tests. With the ExamcollectionPass Channel Partner Program Appian Senior Developer ACD201 Practice Test questions you can prepare yourself shortly for the final Appian Senior Developer ACD201 exam.

Appian Senior Developer Sample Questions (Q97-Q102):

NEW QUESTION # 97

You're developing a user input form for a financial services application.

One component of this form requires you to embed an external site (in the form of a URL) that can receive inputs from Appian and return updates as the user interacts with it.

What should you do?

- **A. Use a component plug-in to achieve interaction with the embedded site, because this use case requires input-output or event parameters.**
- B. Use an integration to achieve interaction with the embedded site while displaying information in the Appian out-of-the-box Web Content Component. That way you can refresh for updates and interact with the site.
- C. Use the Appian out-of-the-box Web Content Component. It can display content from a URL and provide both additional inputs, or receive updates as the user interacts with the embedded site.

Answer: A

Explanation:

A component plug-in is required because the standard Web Content Component in Appian only displays external sites and does not support direct two-way interaction or input/output event handling. A plug-in enables custom integration to allow input and receive updates as users interact with the embedded site.

NEW QUESTION # 98

You're conducting a code review and notice that some accessibility features are missing on the interfaces.

Which two UX best practices should be followed to align with accessibility requirements? (Choose two.)

- **A. Indicate the hierarchy of sections with a heading tag in addition to label sizes (for example: "H1").**
- B. Use rich text items to act as headers for structuring interfaces.
- **C. Apply a label value for all fields when the label position is "Hidden".**
- D. Use a single rich text icon with "POSITIVE" or "NEGATIVE" styling to indicate statuses.

Answer: A,C

Explanation:

Applying a label value for all fields, even when the label position is hidden, ensures screen readers and assistive technologies can interpret the field correctly.

Indicating the hierarchy of sections with heading tags improves navigation for users with assistive technologies, aligning with accessibility standards.

NEW QUESTION # 99

You're creating an interface object that displays a report of open cases. This interface will be used as the content of a site page. Users in the "ACME Employees" group must be able to view the report. Which two steps should you perform? (Choose two.)

- A. Ensure that the site page visibility permits the "ACME Employees" group to view the page.
- B. Add the "ACME Employees" group as a viewer on the folder containing the interface object.
- C. Add the "ACME Employees" group as a viewer on the site object.
- D. Include the "ACME Employees" group as a member of the "Report Viewers" system group.

Answer: A,B

Explanation:

The site page visibility must permit the "ACME Employees" group to ensure they can access the site page with the report. The "ACME Employees" group must be added as a viewer on the folder containing the interface object to grant them access to the report interface.

NEW QUESTION # 100

What are two advantages of database normalization? (Choose two.)

- A. Minimizing the number of tables that need to be created.
- B. Enforcing data integrity.
- C. Minimizing data redundancy.
- D. Simplifying query statements to read data.

Answer: B,C

Explanation:

Database normalization enforces data integrity by structuring data and relationships to prevent anomalies. It minimizes data redundancy by ensuring each piece of information is stored only once, reducing duplication.

NEW QUESTION # 101

You need to relate two entities, Employee and Skill, in the data structure. You want to adhere to Appian best practices. Employees can have multiple skills, and a single skill can relate to multiple employees. What type of relationship do these entities represent, and what is the minimum number of tables required to implement the design?

- A. One-to-many; 2 tables
- B. Many-to-many; 2 tables
- C. Many-to-many; 3 tables

Answer: C

Explanation:

The relationship between Employee and Skill is many-to-many - an employee can have multiple skills, and each skill can belong to multiple employees.

To model this properly and according to Appian best practices, you need 3 tables:

Employee table

Skill table

EmployeeSkill (junction/association) table - contains foreign keys referencing both Employee and Skill to manage the many-to-many relationship.

NEW QUESTION # 102

.....

The Appian ACD201 certification exam syllabus is changing with the passage of time. As a ACD201 exam candidate you have to be aware of these Appian ACD201 exam changes.
