CompTIA PenTest+ Certification Sample Questions (Q454-Q459):

NEW QUESTION # 454

Given the following code:

```
$p = (80, 110, 25)
$network = (192.168.0)
$range = 1 .. 254
$ErrorActionPreference = 'silentlycontinue'
$Foreach ($add in $range)
$Foreach ($x in $p)
{ {$ip = "PT0-002 . {1} -F $network, $add"
If (Test-Connection -BufferSize 32 -Count 1 -quiet -ComputerName $ip)
{$socket = new-object System.Net.Sockets.TcpClient (&$ip, $x)
If ($socket.Connected) { $ip $p open"
$socket.Close () }
}
}}
}}
```

Which of the following tasks could be accomplished with the script?

- A. File download
- B. Ping sweep
- C. Port scan
- D. Reverse shell

Answer: C

Explanation:

The script is performing a port scan on the network 192.168.0.0/24, by testing the connectivity of three ports (80, 110, 25) on each IP address in the range 1-254. A port scan is a technique used to identify open ports and services on a target host or network. It can be used for reconnaissance, vulnerability assessment, or penetration testing. Reference:

NEW QUESTION # 455

A final penetration test report has been submitted to the board for review and accepted. The report has three findings rated high. Which of the following should be the NEXT step?

- A. Perform a new penetration test.
- B. Broaden the scope of the penetration test.
- C. Provide the list of common vulnerabilities and exposures.
- D. Remediate the findings.

Answer: D

NEW QUESTION # 456

Which of the following tools should a penetration tester use to crawl a website and build a wordlist using the data recovered to crack the password on the website?

- A. CeWL
- B. DirBuster

- C. Patator
- D. w3af

Answer: A

Explanation:

Explanation

CeWL, the Custom Word List Generator, is a Ruby application that allows you to spider a website based on a URL and depth setting and then generate a wordlist from the files and web pages it finds. Running CeWL against a target organization's sites can help generate a custom word list, but you will typically want to add words manually based on your own OSINT gathering efforts. <https://esgeeks.com/como-utilizar-cewl/>

NEW QUESTION # 458

Which of the following OSSTM testing methodologies should be used to test under the worst conditions?

- A. Tandem
- B. Known environment
- C. Reversal
- D. Semi-authorized

Answer: B

Explanation:

The OSSTM testing methodology that should be used to test under the worst conditions is known environment, which is a testing approach that assumes that the tester has full knowledge of the target system or network, such as its architecture, configuration, vulnerabilities, or defenses. A known environment testing can simulate a worst-case scenario, where an attacker has gained access to sensitive information or insider knowledge about the target, and can exploit it to launch more sophisticated or targeted attacks. A known environment testing can also help identify the most critical or high-risk areas of the target, and provide recommendations for improving its security posture. The other options are not OSSTM testing methodologies that should be used to test under the worst conditions. Tandem is a testing approach that involves two testers working together on the same target, one as an attacker and one as a defender, to simulate a realistic attack scenario and evaluate the effectiveness of the defense mechanisms. Reversal is a testing approach that involves switching roles between the tester and the client, where the tester acts as a defender and the client acts as an attacker, to assess the security awareness and skills of the client. Semi-authorized is a testing approach that involves giving partial or limited authorization or access to the tester, such as a user account or a network segment, to simulate an attack scenario where an attacker has compromised a legitimate user or device.
