- B. Stores all data that has changed from the time the replication session started
- C. Runs data protection software and manages replications within and across data centers
- D. Intercepts writes to the production volume and splits each write into two copies

Answer: D

Explanation:
ACDP appliancesits in the data path and:
Intercepts all writesto the production volume.
Splits each write into two copies: one goes to the production volume, the other to the replica volume.
Maintains a journal for point-in-time recovery.

- B. Migrates data from a data center to the cloud at no cost
- C. Reduces the complexity of managing information by creating silos of storage
- D. Enables efficient and optimized storage and management of information

Answer: D

Explanation:
Intelligent storage systems incorporate advanced features like automated tiering, deduplication, and compression. These features enable efficient storage utilization and optimized management by automating data placement and reducing manual intervention.
* Option A: While intelligent systems may facilitate cloud integration, they do not guarantee cost-free migration.
* Option B: Data reduction features help, but the primary advantage is broader efficiency and optimization.
* Option C: Creating silos increases complexity; intelligent systems aim to unify and simplify storage management.

Storage devices
File systems
Ports and connectivity
It helps ensure service levels are met and detect potential issues.
* Reporting: Summarizes data (often based on monitoring data).
* Alerting: Notifies of specific events or thresholds (also uses monitoring data).

- D. To manage the backup

Answer: C

Explanation:
Astorage nodeis a component in a backup architecture that handles the actualdata movementduring the backup process:
Itorganizesthe backup data stream.
Itwritesthe data to the backup target (disk, tape, or cloud).
It does not manage policies or schedules (that's the role of the backup server or management console).
* Option A:Monitoring is done by the backup server or management tools.
* Option C:Backup management (scheduling, policies) is also handled by the backup server.
* Option D:Deduplication may be part of the process but is not theprimary roleof a storage node.

Fast and efficient for known threats.
Updated regularly by security vendors.
* Reputation-based:Looks at the trustworthiness of files/domains.
* Behavioral:Monitors actions and identifies suspicious patterns.
* Heuristic:Detects new malware based on file behaviors and patterns, useful for unknown threats.
