Fortinet FCSS - Network Security 7.4 Support Engineer Sample Questions (Q62-Q67):

NEW QUESTION # 62

Refer to the exhibit. Antivirus is unable to detect an infected file downloaded through HTTPS. Part of the configuration used for antivirus inspection is shown in the exhibit.

Which configuration changes can be performed to inspect HTTPS?

Antivirus profile configuration

```
config antivirus profile
    edit "Block"
        config http
            set av-scan block
        end
        config ftp
            set av-scan block
        end
        config imap
            set av-scan block
        end
        config pop3
            set av-scan block
        end
        config smtp
            set av-scan block
        end
    next
end
```

Firewall policy configuration

```

config firewall ssl-ssh-profile
edit "certificate-inspection"
    set comment "SSL handshake inspection."
    config https
        set ports 443
        set status certificate-inspection
        set quic inspect
    end
    config ftps
        set status disable
    end
    config imaps
        set status disable
    end
    config pop3s
        set status disable
    end
    config smtps
        set status disable
    end
    config ssh
        set ports 22
        set status disable
    end
    config dot
        set status disable
        set quic inspect
        set unsupported-ssl-version allow
    end
next
end

```

- A. Disable the emulatorsetting.
- B. Set a different antivirus database.
- C. **Enable SSL deep inspection.**
- D. Increase the maximum number of subdirectories and nested archives.

Answer: C

Explanation:

You must switch from mere certificate inspection to full SSL deep inspection on the HTTPS profile so that the FortiGate can decrypt

the traffic and pass it through the AV engine. In practice this means editing the SSL/SSH profile and setting the HTTPS inspection mode to deep-inspection (and ensuring your CA cert is installed on the clients).

NEW QUESTION # 63

Refer to the exhibit, which shows a session entry.

```
