Reliable PDII Dumps, PDII Verified Answers

Different from the common question bank on the market, PDII exam guide is a scientific and efficient learning system that is recognized by many industry experts. In normal times, you may take months or even a year to review a professional exam, but with PDII exam guide you only need to spend 20-30 hours to review before the exam. And with PDII learning question, you will no longer need any other review materials, because our study materials already contain all the important test sites. At the same time,

PDII Test Prep helps you to master the knowledge in the course of the practice. And at the same time, there are many incomprehensible knowledge points and boring descriptions in the book, so that many people feel a headache and sleepy when reading books. But with PDII learning question, you will no longer have these troubles.

To take the PDII exam, a developer must first pass the Salesforce Certified Platform Developer I (PDI) exam. The PDII exam is intended for developers who have at least two years of experience building and designing applications on the Salesforce platform. It is worth noting that the exam is constantly evolving to keep up with the latest Salesforce updates, so developers must stay up-to-date with the latest platform changes to pass.

Salesforce PDII (Salesforce Certified Platform Developer II) is an advanced-level certification program designed for experienced Salesforce developers who want to take their skills and knowledge to the next level. The PDII Certification is the second level of certification in the Salesforce Certified Platform Developer series and is recognized globally as a benchmark for excellence in Salesforce development. Salesforce Certified Platform Developer II (PDII) certification exam evaluates a candidate's ability to design, develop, and implement advanced business logic and complex programming solutions on the Salesforce platform.

Salesforce Certified Platform Developer II (PDII) Sample Questions (Q196-Q201):

NEW QUESTION # 196

Which two queries are selective SOQL queries and can be used for a large data set of 200,000 Account records? Choose 2 answers

- A. SELECT id FROM ACCOUNT WHERE Name = Null AND Customer_Number_c= 'ValueA'
- B. SELECT id FROM ACCOUNT WHERE Name = Null
- C. SELECT id FROM ACCOUNT WHERE id IN (list of Account Ids)
- D. SELECT id FROM ACCOUNT WHERE Name = ':'

Answer: C,D

NEW QUESTION # 197

Assuming the CreateOneAccount class creates one account and implements the Queueable interface, which syntax properly tests the Apex code?

```
List<Account> accts;  
System.enqueueJob( new CreateOneAccount() );  
Test.startTest();  
System.assertEquals(1, accts.size() );  
Test.stopTest();
```

- A.

```
List<Account> accts;  
Test.startTest();  
System.enqueueJob( new CreateOneAccount() );  
Test.stopTest();  
accts = [SELECT Id FROM Account];
```
- B.

```
System.assertEquals( 1, accts.size() );
```

- ```
List<Account> accts;
System.enqueueJob(new CreateOneAccount());
Test.getFlexQueueOrder();
System.assertEquals(1, accts.size());
```
- C.

```
List<Account> accts;
System.enqueueJob(new CreateOneAccount());
accts = [SELECT Id FROM Account];
System.assertEquals(1, accts.size());
```

- D.

**Answer: B**

#### NEW QUESTION # 198

A Lightning web component exists in the system and displays information about the record in context as a medal. Salesforce administrators need to use this component within the Lightning App Builder, Which two settings should the developer configure within the xml resource file?

Choose 2 answers

- A. Specify the target to be lightning\_RecordPage
- B. Specify the target to be lightning\_AppPage
- C. Set the isVisible attribute to true
- D. Set the IsExposed attribute to true.

**Answer: A,D**

Explanation:

The two settings that the developer should configure within the xml resource file are to specify the target to be lightning\_RecordPage and to set the IsExposed attribute to true. The target element defines where the component can be used, and the lightning\_RecordPage value indicates that the component can be used on a Lightning record page. The IsExposed attribute determines whether the component is available in tools such as App Builder or Experience Builder, and setting it to true exposes the component to these tools. The isVisible attribute is not a valid answer, as it is not a valid attribute for the xml resource file, and it does not affect the availability of the component. The lightning\_AppPage value is not a valid answer, as it indicates that the component can be used on a Lightning app page, not a Lightning record page. Reference: [Configure Components for Lightning Pages and the Lightning App Builder], [Lightning Web Components Developer Guide]

#### NEW QUESTION # 199

A developer is building a Lightning web component that displays quantity, unit price, and the total for an order line item. The total is calculated dynamically as the quantity multiplied by the unit price.

### JavaScript:

```
import { LightningElement } from 'lwc';
export default class OrderLineItem extends LightningElement {
 @api quantity;
 @api unitPrice;
}
```

### Template Markup:

```
<template>
 <div>
 Quantity: {quantity}

 Unit Price: {unitPrice}

 </div>
</template>
```

What must be added to display the total?

- A. Add `get total() { return quantity * unitPrice; }` to the JavaScript and `Total: {total}` in the template.
- B. Add `Total: {multiple quantity, unitPrice}` in the template.
- C. Add `calculate Total() {return quantity * unitPrice;}` to the JavaScript and `Total : {calculate Total()}` in the template.
- D. Add `Total: {quantity * UnitPrice}` in the template.

**Answer: A**

### NEW QUESTION # 200

A company notices that their unit tests in a test class with many methods to create many records for prerequisite reference data are slow.

What can a developer do to address the issue?

- A. Move the prerequisite reference data setup to the constructor for the test class.
- B. Move the prerequisite reference data setup to a `TestDataFactory` and call that from each test method.
- C. Move the prerequisite reference data setup to a static method in the test class and call that from each test method.
- D. Move the prerequisite reference data setup to a `@testSetup` method in the test class.

**Answer: B**
