Pass-Sure PDII – 100% Free Reliable Test Online | PDII Actual Exams

To those time-sensitive exam candidates, our high-efficient PDII actual dumps comprised of important news will be best help. Only by practicing our PDII learning guide on a regular base, you will see clear progress happened on you. Besides, rather than waiting for the gain of our PDII Practice Engine, you can download them immediately after paying for it, so just begin your journey toward success now.

Salesforce Certified Platform Developer II (PDII) Sample Questions (Q105-Q110):

NEW QUESTION # 105

A company has a web page that needs to get Account record information, such as name, website, and employee number. The Salesforce record ID is known to the web page and it uses JavaScript to retrieve the account information. Which method of integration is optimal?

- A. SOAP API
- B. Apex REST web service
- C. Apex SOAP web service
- **D. REST API**

Answer: D

Explanation:

For retrieving specific records using a known ID, the REST API is optimal due to its stateless, cacheable communications and lightweight structure. It's ideal for web applications that use JavaScript to make requests directly from the user's browser. Using the REST API, the web page can make a simple HTTP GET request to the Salesforce REST service endpoint and retrieve the account information in a format that's easily handled by JavaScript (typically JSON).

REST API Developer Guide

NEW QUESTION # 106

Consider the Apex controller below, that is called from an Aura component.

```
Line 1 public class AttributeTypes
Line 2 {
Line 3     private final String[] arrayItems;
Line 4
Line 5     @AuraEnabled
Line 6     public List<String> getStringArray() {
Line 7         String[] arrayItems = new String[] { 'red', 'green',
Line 8         'blue' };
Line 9         return arrayItems;
Line 10 }
```

What is wrong with this code?

- **A. Line 8: method must first serialize the list to JSON before returning**
- B. Line 1: class must be global
- C. Line 6: method must be static

Answer: A

Explanation:

The method defined in the Apex class must be static to be used as an Aura-enabled method. Aura-enabled methods need to be static because they are called by the Lightning framework without instantiating the class. References: Apex Developer Guide - Exposing Apex Methods to Lightning

NEW QUESTION # 107

What is a benefit of JavaScript remoting over Visualforce Remote Objects?

- A. Does not require any JavaScript code
- B. Allows for specified re-render targets
- C. Does not require any Apex code
- D. Supports complex server-side application logic

Answer: D

NEW QUESTION # 108

What type of request and payload format can be received by a static method in a global Apex class that uses the webservice keyword?

- A. SOAP/XML and REST/JSON
- B. SOAP/XML and SOAP/JSON
- C. SOAP/XML
- D. REST/JSON

Answer: C

NEW QUESTION # 109

Refer to the code snippet below:

```
public static void updateCreditMemo(String customerId, Decimal newAmount){
    List<Credit_Memo__c> toUpdate = new List<Credit_Memo__c>();
    for(Credit_Memo__c creditMemo : [Select Id, Name, Amount__c FROM Credit_Memo__c WHERE Customer_Id__c = :customerId LIMIT 50]){
        creditMemo.Amount__c = newAmount;
        toUpdate.add(creditMemo);
    }
    Database.update(toUpdate,false);
}
```

A custom object called Credit_Memo__c exists in a Salesforce environment. As part of a new feature development that retrieves and manipulates this type of record, the developer needs to ensure race conditions are prevented when a set of records are modified within an Apex transaction.

In the preceding Apex code, how can the developer alter the query statement to use SOQL features to prevent race conditions within a transaction?

- A.

[SELECT Id, Name, Amount__c FROM Credit_Memo__c WHERE Customer_Id__c = :customerId LIMIT 50]

- B.

[SELECT Id, Name, Amount__c FROM Credit_Memo__c WHERE Customer_Id__c = :customerId LIMIT 50 FOR UPDATE]

- C.

[SELECT Id, Name, Amount__c FROM Credit_Memo__c WHERE Customer_Id__c = :customerId LIMIT 50 FOR VIEW]

- D.

[SELECT Id, Name, Amount__c FROM Credit_Memo__c WHERE Customer_Id__c = :customerId LIMIT 50 FOR VIEW]

Answer: B

Explanation:

To prevent race conditions during an Apex transaction, the SOQL query can be modified to include the "FOR UPDATE" keyword. This keyword locks the records that are returned by the query, preventing other transactions from modifying them until the current transaction is complete. This ensures that the retrieved records cannot be changed by another process before the current transaction is completed, thus preventing race conditions. The correct option to use in the code snippet provided is:

[SELECT Id, Name, Amount__c FROM Credit_Memo__c WHERE Customer_Id__c = :customerId LIMIT 50 FOR UPDATE]

This will lock up to 50 records of Credit_Memo__c with the specified Customer_Id__c for the duration of the transaction.
