PDII Valid Exam Book, PDII Most Reliable Questions

Three formats of our study material are Salesforce PDII PDF Questions, Desktop Practice Test Software, and a Web-Based Practice Exam. We understand that the learning style of every Salesforce Certified Platform Developer II (PDII) (PDII) exam applicant is different. Therefore, we offer three formats of PDII Practice Test material. Now every Salesforce Certified Platform Developer II (PDII) (PDII) exam candidate can prepare as per his style by selecting the suitable format.

The PDII certification exam covers a wide range of topics related to Salesforce development, including Apex programming, Lightning Components, and application design. Successful candidates will have a strong understanding of the Salesforce development platform and be able to design and develop complex applications that meet business requirements. The PDII Certification is highly regarded in the Salesforce developer community and is a valuable asset for developers looking to advance their careers in this field.

PDII Most Reliable Questions & PDII Latest Braindumps Ebook

As a professional website, DumpTorrent does not only guarantee you will receive a high score in your actual test, but also provide you with the most efficiency way to get success. Our PDII study torrent can help you enhance the knowledge and get further information about the PDII Actual Test. During the study and preparation for PDII actual test, you will be more confident,

independent in your industry. Dear everyone, go and choose our PDII practice dumps as your preparation material.

Salesforce Certified Platform Developer II (PDII) Sample Questions (Q106-Q111):

NEW QUESTION # 106
A developer created a Lightning web component that allows users to input a text value that is used to search for Accounts by calling an Apex method. The Apex method returns a list of AccountWrappers and is called imperatively from a JavaScript event handler.

```
01:
02: public class AccountSearcher {
03:
04:    public static List<AccountWrapper> search(String term) {
05:        List<AccountWrapper> wrappers = getMatchingAccountWrappers(term);
06:        return wrappers;
07:    }
08:
09:
10:    public class AccountWrapper {
11:        public Account ( get; set; )
12:        public Decimal matchProbability { get; set; }
13:    }
14:    // ...other methods, including getMatchingAccountWrappers implementation...
15: }
```

Which two changes should the developer make so the Apex method functions correctly?
Choose 2 answers

- A. Add @AuraEnafcle3 to line 09.
- B. Add @AuraEnat:ei to line 01.
- C. Add @AuraEnabled to line 03.
- D. Add @AuraEnabled to lines 11 and 12.

Answer: C,D

NEW QUESTION # 107
Universal Containers (UC) has an ERP system that stores customer Information, When an Account is created in Salesforce, the ERP system's REST endpoint for creating new customers must automatically be called with the Account information. If the call to the ERP system falls, the Account should still be created. Accounts in the UC org are only created, one at a time, by users in the UC customer on-boarding department.
What should a developer implement to make the call to the ERP
system's REST endpoint?

- A. Headless Quick Action
- B. Call a Queueable from a Trigger
- C. Apex Continuation
- D. REST call from JavaScript

Answer: D

NEW QUESTION # 108
A developer is building a Lightning web component that searches
for Contacts. The component must communicate the search
results to other unrelated Lightning web components, that are in
different DOM trees, when the search completes.
What should the developer do to implement the communication?

- A. Fire an application event.
- B. Publish a message on a message channel.
- C. Fire a custom component event.
- D. Publish an event on an event channel.

Answer: B

Explanation:
The developer should publish a message on a message channel to implement the communication between the Lightning web components. A message channel is a Lightning web component feature that allows the developer to communicate across the DOM between any components that are listening on the channel. The developer can use the @wire decorator to subscribe to a message channel, and use the publish() function to publish a message on the channel. The message can contain any data that the components need to share, such as the search results. The components that are subscribed to the channel will receive the message and handle it accordingly. Firing an application event will not work, as application events are a Lightning Aura component feature, not a Lightning web component feature, and they are used to communicate across the entire Lightning Experience application, not across the DOM. Publishing an event on an event channel will not work, as event channels are used to publish and subscribe to platform events, which are events that represent changes in Salesforce data or processes, not custom events that represent changes in component data. Firing a custom component event will not work, as custom component events are used to communicate between a parent and a child component in the same DOM tree, not between unrelated components in different DOM trees. Reference: [Communicate Across the DOM], [Lightning Web Components Developer Guide]

NEW QUESTION # 109

A developer is inserting, updating, and deleting multiple lists of records in a single transaction and wants to ensure that any error prevents all execution.
How should the developer implement error exception handling in their code to handle this?

- A. Use Database.setSavepoint {} and Database.rollBack with a try-catch statement.
- B. Use a try-catch statement and handle DML cleanup in the catch statement,
- C. Use Database methods to obtain lists of Database.SaveResults.
- D. Use a try-catch and use sObject.addError() on any failures.

Answer: A

Explanation:
Using Database.setSavepoint() and Database.rollback() within a try-catch statement is the recommended approach for handling transactions that involve multiple DML operations. This allows the developer to roll back all changes if an error occurs, ensuring that partial changes are not committed to the database.References:
Apex Developer Guide - Savepoint and Transaction Control

NEW QUESTION # 110

A developer created a Lightning web component that uses a lightning-record-edit-form to collect information about Leads. Users complain that they only see one error message at a time about their input when trying to save a Lead record.
What is the recommended approach to perform validations on more than one field, and display multiple error messages simultaneously with minimal JavaScript intervention?

- A. Apex trigger
- B. Validation rules
- C. Try/catch/finally block
- D. External JavaScript library

Answer: D

Explanation:
The recommended approach to perform validations on more than one field, and display multiple error messages simultaneously with minimal JavaScript intervention is to use an external JavaScript library. An external JavaScript library is a collection of reusable code that can provide additional functionality and features to the Lightning web component. The developer can use an external JavaScript library that supports form validation, such as jQuery Validation or Parsley.js, and import it into the Lightning web component. The developer can then use the library's methods and options to define the validation rules and messages for each field, and to display the errors on the component. Using a try/catch/finally block will not help, as it is used to handle exceptions and errors in the code, but it does not perform validations on the fields or display error messages. Using validation rules will not help, as they are used to enforce data quality and integrity on the server side, but they do not perform validations on the client side or display error messages on the component. Using an Apex trigger will not help, as it is used to execute logic before or after a record is inserted, updated, deleted, or undeleted, but it does not perform validations on the client side or display error messages on the component. Reference: [Use Third-Party JavaScript Libraries], [Lightning Web Components Developer Guide]

NEW QUESTION # 111
......

By gathering, analyzing, filing essential contents into our PDII training quiz, they have helped more than 98 percent of exam candidates pass the PDII exam effortlessly and efficiently. You can find all messages you want to learn related with the exam in our PDII Practice Engine. Any changes taking place in the environment and forecasting in the next PDII exam will be compiled earlier by them. About necessary or difficult questions, they left relevant information for you.
