Pegasystems Certified Pega Business Architect 24 Sample Questions (Q41-Q46):

NEW QUESTION # 41

You are configuring an accident claim case with two child cases for an automobile insurance company, as shown in the following figure:

The business requirement changes to allow the parent case to continue independently of the child case processes, what do you configure the Wait step for this requirement?

- A. Configure the step so that users can continue with the parent case process regardless of child case status.
- B. Configure the step so that only one child case must be resolved before the parent case can continue.
- C. Configure the step to continue the parent case when the child cases reach auditor approval.
- D. Configure the step to continue the parent case when the child cases reach the payment pending review status.

Answer: A

Explanation:

To configure a parent case to continue independently of its child cases, you need to adjust the Wait step settings in the parent case. By configuring the Wait step so that users can continue with the parent case process regardless of the child case status, the parent case does not need to wait for the child cases to reach a certain status or be resolved. This allows for parallel processing where the parent case progresses independently of the child cases.

Reference: Pega Academy - Wait Step: The Wait step in a case lifecycle is used to pause the processing of a case until a specific condition is met. Adjusting the wait condition allows the parent case to proceed independently of the child cases.

NEW QUESTION # 42

Determine whether the given solution is correct?

The generative AI features in Pega Platform™ the low-code application development process.

Solution:

The generative AI features in Pega Platform™ accelerate the low-code application development process.

Determine whether the given solution is correct? Response:

- A. Correct
