2025 ITIL-4-Practitioner-Release-Management – 100% Free Valid Test Pass4sure | High Hit-Rate Pass4sure ITIL-4-Practitioner-Release- Management Study Materials

If you can get a certification, it will be help you a lot, for instance, it will help you get a more job and a better title in your company than before, and the ITIL-4-Practitioner-Release-Management certification will help you get a higher salary. We believe that our company has the ability to help you successfully pass your exam and get a ITIL-4-Practitioner-Release-Management certification by our ITIL-4-Practitioner-Release-Management exam torrent. We can promise that you would like to welcome this opportunity to kill two birds with one stone. If you choose our ITIL-4-Practitioner-Release-Management Test Questions as your study tool, you will be glad to study for your exam and develop self-discipline, our ITIL-4-Practitioner-Release-Management latest question adopt diversified teaching methods, and we can sure that you will have passion to learn by our products.

Peplecert ITIL 4 Practitioner: Release Management Exam Sample Questions (Q10-Q15):

NEW QUESTION # 10

A service owner is initiating the release planning and coordination process for a complex project. What is an example of the FIRST activity that the service owner should undertake in this instance?

- A. Select a release model that fits with the types of changes to be included in the release
- B. Ensure that the release procedures are appropriate for the particular release under consideration
- C. Test the service components and take remedial action as necessary
- D. Check that an automated notification has been sent to stakeholders

Answer: A

Explanation:

The release planning and coordination process begins with defining the approach for the release. The ITIL 4 Practitioner: Release Management document states: "The first step in release planning and coordination is to select an appropriate release model that fits the types of changes to be included in the release. This ensures that the release approach aligns with the nature and complexity of the changes" (Section 3.2.1).

* Option A (Test the service components) is part of the release execution or testing phase, not the first step in planning.

* Option B (Ensure that the release procedures are appropriate) is a subsequent step after selecting the model, to confirm procedural alignment.

* Option C (Select a release model) is the first activity, as it sets the foundation for how the release will be structured and managed, especially for a complex project.

* Option D (Check that an automated notification has been sent) occurs later, during the communication phase of the release process.

The correct answer is C, as selecting the release model is the initial step in release planning.

NEW QUESTION # 11

Which is a key input to the release planning and coordination process?

- A. Documented findings on the success of a release
- B. Details about the users who will be affected
- C. Notifications to stakeholders about the release status
- D. Updates to the continual improvement register

Answer: B

Explanation:

The release planning and coordination process in ITIL 4 Release Management requires inputs to ensure effective planning and execution of releases. The ITIL 4 Practitioner: Release Management document specifies: "Key inputs to release planning and coordination include details about the users who will be affected, as this helps in scheduling and communicating the release to minimize disruption" (Section 3.2.1).

* Option A (Documented findings on the success of a release) is an output of a release evaluation, not an input to planning.

* Option B (Updates to the continual improvement register) may inform long-term improvements but isn't a direct input to planning a specific release.

* Option C (Details about the users who will be affected) is a critical input, as understanding the user base helps tailor the release schedule, communication, and impact mitigation strategies.

* Option D (Notifications to stakeholders about the release status) is an output of the release process, not an input to planning.

The correct answer is C, as user details are essential for effective release planning and coordination.

NEW QUESTION # 12

A large organization is adjusting its IT organizational structure to optimize for faster, more collaborative, and less bureaucratic working practices. There is a significant number of changes and related releases that are handled by the product and project teams. What is the BEST way for the organization to position release management in the new organizational structure?

- A. Appoint a release manager in every product team to coordinate and coach the team members
- B. Delegate most release management responsibilities to product and project teams but appoint a release manager to

coordinate and coach the teams

- C. Establish a centralized release management team to manage all releases
- D. Delegate all release management responsibilities to product and project teams

Answer: B

Explanation:

In a collaborative, less bureaucratic structure, release management needs to balance decentralization with oversight to ensure consistency and alignment. The ITIL 4 Practitioner: Release Management document advises: "In organizations adopting collaborative practices, release management responsibilities can be delegated to product and project teams to enable faster decision-making, but a release manager should be appointed to coordinate and coach the teams, ensuring consistency and adherence to standards" (Section 3.3.2).

* Option A (Centralized team) contradicts the goal of reducing bureaucracy and enabling faster, collaborative practices.

* Option B (Delegate all responsibilities) risks inconsistency and lack of oversight, which can lead to uncoordinated releases.

* Option C (Delegate most responsibilities but appoint a release manager to coordinate and coach) balances decentralization with oversight, aligning with the goal of faster, collaborative practices while maintaining consistency.

* Option D (Appoint a release manager in every team) is overly resource-intensive and may lead to fragmented approaches across teams.

The correct answer is C, as it best supports the new organizational structure while ensuring effective release management.

NEW QUESTION # 13

A service provider is conducting a capability assessment of the release management practice. It has been found that although the practice's performance is regularly reported and reviewed, most recommendations based on the reports are never implemented. What is the MAXIMUM capability level that could be given to the release management practice?

- A. Level 3
- B. Level 5
- C. Level 2
- D. Level 4

Answer: C

Explanation:

The ITIL capability model assesses practices based on their maturity and ability to improve. The ITIL 4 Practitioner: Release Management document outlines the capability levels: "Level 2 (Managed) indicates that the practice is planned and tracked, with performance regularly reported. Level 3 (Defined) requires standardized processes and the ability to improve based on feedback. If recommendations from performance reviews are not implemented, the practice cannot achieve Level 3" (Section 5.2).

* The scenario indicates that performance is reported and reviewed (meeting Level 2 requirements), but recommendations are not implemented, meaning there's no improvement or standardization beyond basic management.

* Level 3 requires consistent improvement and standardization, which is not met due to the lack of implementation.

* Levels 4 (Quantitatively Managed) and 5 (Optimizing) require even higher maturity, including data-driven improvements and continuous optimization, which are not applicable here.

The maximum capability level is A (Level 2), as the practice is managed but not improving.

NEW QUESTION # 14

A service provider is reviewing its release management practice. It has been found that most releases meet their objectives and are delivered on time. However, teams and organizations using the service provider's services are complaining that sometimes software updates interrupt their work during peak business hours.

What should the service provider do to improve the release management practice by applying the 'collaborate and promote visibility' guiding principle?

- A. Ensure an excellent user experience
- B. Do not overcomplicate the practice
- C. Review the effectiveness of release models
- D. Optimize the practice for the value streams

Answer: A

Explanation:

The 'collaborate and promote visibility' guiding principle in ITIL 4 emphasizes working with stakeholders to ensure transparency and alignment with their needs. The ITIL 4 Practitioner: Release Management document advises: "Applying the 'collaborate and promote visibility' principle involves working closely with stakeholders, such as service consumers, to understand their needs and ensure releases do not disrupt their operations, thereby ensuring an excellent user experience" (Section 5.1).

* The issue is that updates interrupt work during peak hours, indicating a lack of collaboration with users to understand their schedules and needs.

* Option A (Ensure an excellent user experience) directly addresses this by implying collaboration with users to schedule releases at non-disruptive times, aligning with the principle.

* Option B (Review the effectiveness of release models) is an internal activity and doesn't directly involve collaboration with stakeholders.

* Option C (Optimize the practice for the value streams) focuses on value stream efficiency but doesn't specifically address user collaboration.

* Option D (Do not overcomplicate the practice) is unrelated to the collaboration principle.

The correct answer is A, as ensuring an excellent user experience through collaboration directly applies the principle to address the issue.

NEW QUESTION # 15

.....

Are you an ambitious person and do you want to make your life better right now? If the answer is yes, then you just need to make use of your spare time to finish learning our ITIL-4-Practitioner-Release-Management exam materials and we can promise that your decision will change your life. So your normal life will not be disturbed. Please witness your growth after the professional guidance of our ITIL-4-Practitioner-Release-Management Study Materials.
