

Perfect NCP-US-6.5 - Latest Braindumps Nutanix Certified Professional - Unified Storage (NCP-US) v6.5 Ppt

BONUS!!! Download part of TestBraindump NCP-US-6.5 dumps for free: <https://drive.google.com/open?id=1z6HZ2S0b37XnRjWi-wPd0ftNTdZmhMd>

Before we decide to develop the NCP-US-6.5 preparation questions, we have made a careful and thorough investigation to the customers. We have taken all your requirements into account. Firstly, the revision process is long if you prepare by yourself. If you collect the keypoints of the NCP-US-6.5 exam one by one, it will be a long time to work on them. Secondly, the accuracy of the NCP-US-6.5 Exam Questions And Answers is hard to master. Because the content of the exam is changing from time to time. But our NCP-US-6.5 practice guide can help you solve all of these problems.

In today's society, many enterprises require their employees to have a professional NCP-US-6.5 certification. It is true that related skills serve as common tools frequently used all over the world, so we can realize that how important an NCP-US-6.5 certification is, also understand the importance of having a good knowledge of it. Passing the NCP-US-6.5 exam means you might get the chance of higher salary, greater social state and satisfying promotion chance. Once your professional NCP-US-6.5 ability is acknowledged by authority, you master the rapidly developing information technology. With so many advantages, why don't you choose our reliable NCP-US-6.5 actual exam guide, for broader future and better life?

>> Latest Braindumps NCP-US-6.5 Ppt <<

NCP-US-6.5 Torrent Vce - NCP-US-6.5 Certking Pdf & NCP-US-6.5 Free Questions

Our NCP-US-6.5 exam questions are often in short supply. Every day, large numbers of people crowd into our website to browse our NCP-US-6.5 study materials. Then they will purchase various kinds of our NCP-US-6.5 learning braindumps at once. How diligent they are! As you can see, our products are absolutely popular in the market. And the pass rate of our NCP-US-6.5 training guide is high as 98% to 100%. Just buy it and you will love it!

Nutanix NCP-US-6.5 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"> • Deploy and Upgrade Nutanix Unified Storage • Perform upgrades • maintenance for Files • Objects implementations
Topic 2	<ul style="list-style-type: none"> • Given a scenario, configure shares, buckets, and or Volume Groups • Troubleshoot a failed upgrade for Files • Objects
Topic 3	<ul style="list-style-type: none"> • Configure Nutanix Objects • Describe how to monitor performance and usage
Topic 4	<ul style="list-style-type: none"> • Configure and Utilize Nutanix Unified Storage • Identify the steps to deploy Nutanix Objects
Topic 5	<ul style="list-style-type: none"> • Troubleshoot issues related to Nutanix Files • Explain Data Management processes for Files and Objects
Topic 6	<ul style="list-style-type: none"> • Troubleshoot issues related to Nutanix Objects • Troubleshoot issues related to Nutanix Volumes

Nutanix Certified Professional - Unified Storage (NCP-US) v6.5 Sample Questions (Q46-Q51):

NEW QUESTION # 46

What is the binary image extension of File Analytics?

- A. ISO
- **B. QCOW2**
- C. VMDK
- D. JSON

Answer: B

Explanation:

File Analytics is deployed as a VM, and Nutanix provides its binary image in QCOW2 format for AHV, which is the primary hypervisor for Nutanix clusters. QCOW2 is the standard disk image format for AHV, making it the correct choice for the File Analytics deployment image.

Exact Extract from Nutanix Documentation:

From the Nutanix File Analytics Deployment Guide (available on the Nutanix Portal):

"The File Analytics VM is provided as a binary image in QCOW2 format for deployment on AHV clusters.

To deploy File Analytics, download the QCOW2 image from the Nutanix Portal and import it into the cluster using Prism Central or Prism Element."

:

Nutanix File Analytics Deployment Guide, Version 4.0, Section: "Deploying File Analytics" (Nutanix Portal).

Nutanix Certified Professional - Unified Storage (NCP-US) Study Guide, Section: "Nutanix File Analytics Deployment".

NEW QUESTION # 47

An administrator wants to provide security against ransomware attacks in Files. The administrator wants to configure the environment to scan files for ransomware in real time and provide notification in the event of a ransomware attack. Which component should the administrator use to meet this requirement?

- **A. File Analytics**
- B. Syslog Server
- C. Protection Domain

- D. Files Console

Answer: A

Explanation:

Nutanix Files, part of Nutanix Unified Storage (NUS), can be protected against ransomware attacks using integrated tools. The administrator's requirement to scan files for ransomware in real time and provide notifications involves a component that can monitor file activity, detect anomalies, and alert administrators.

Analysis of Options:

* Option A (Protection Domain): Incorrect. Protection Domains in Nutanix are used for disaster recovery (DR) of VMs and Volume Groups, not for ransomware protection in Nutanix Files. Files uses replication policies (e.g., NearSync) for DR, and Protection Domains are not relevant for real-time ransomware scanning or notifications.

* Option B (File Analytics): Correct. Nutanix File Analytics, integrated with Nutanix Files, provides real-time monitoring and anomaly detection for ransomware protection. It scans file activity, uses machine learning to detect unusual patterns (e.g., mass file deletions, encryption), and sends notifications to administrators in the event of a potential ransomware attack. This meets the requirement for real-time scanning and notification (as seen in Question 7, where anomaly alerts were configured in File Analytics).

* Option C (Syslog Server): Incorrect. A Syslog Server can receive logs from Nutanix Files (as noted in Question 9), including alerts, but it is not a component that scans files for ransomware in real time. It is a passive logging tool and does not provide active ransomware detection or notification capabilities.

* Option D (Files Console): Incorrect. The Files Console is the management interface for Nutanix Files, used for configuring shares, FSVs, and policies. While it can display alerts, it does not perform real-time ransomware scanning or detection—that functionality is provided by File Analytics.

Why Option B?

File Analytics is specifically designed for data analytics and security in Nutanix Files, including real-time ransomware detection. It monitors file operations, detects anomalies indicative of ransomware (e.g., rapid file modifications, deletions), and sends notifications to administrators, meeting the requirement for real-time scanning and alerts.

Exact Extract from Nutanix Documentation:

From the Nutanix File Analytics Administration Guide (available on the Nutanix Portal):

"Nutanix File Analytics provides real-time protection against ransomware by monitoring file operations and detecting anomalies, such as rapid file modifications or deletions. In the event of a potential ransomware attack, File Analytics sends notifications to administrators, allowing for quick response and mitigation."

:

NEW QUESTION # 48

An administrator has created a volume and needs to attach it to a windows host via iSCSI. The data Services IP has been configured in the MS iSCSI Initiator, but no target are visible.

What is most likely the cause this issue?

- A. The CHAP Authentication has not been configured on the client.
- B. The host's IP address is not authorized to access the volume.
- **C. The host's IQN is not authorized to access the volume.**
- D. The CHAP password configured on the client is incorrect.

Answer: C

Explanation:

Nutanix Volumes uses IQN-based authorization to control access to volumes. The administrator must specify the IQN of the host that needs to access the volume when creating or editing the volume. If the host's IQN is not authorized, it will not be able to see the target in the MS iSCSI Initiator. References: Nutanix Volumes Administration Guide

NEW QUESTION # 49

An administrator is trying to create a Distributed Share, but the Use Distributed Share/Export type instead of Standard option is not present when creating the share.

What is most likely the cause for this?

- A. The cluster only has three nodes.
- B. The cluster is configured with hybrid storage

- C. The file server resides on a single node cluster.
- D. The file server does not have the correct license

Answer: C

Explanation:

The most likely cause for this issue is that the file server resides on a single node cluster. A distributed share is a type of SMB share or NFS export that distributes the hosting of top-level directories across multiple FSVMs, which improves load balancing and performance. A distributed share cannot be created on a single node cluster, because there is only one FSVM available. A distributed share requires at least two nodes in the cluster to distribute the directories. Therefore, the option to use distributed share/export type instead of standard is not present when creating a share on a single node cluster. Reference: Nutanix Files Administration Guide, page 33; Nutanix Files Solution Guide, page 8

NEW QUESTION # 50

An administrator has been directed to configure Volumes to Nutanix's best practices for security. What should the administrator do to be compliant?

- A. Enable at-rest encryption on Volume Groups.
- B. Use data services IP for external host connectivity.
- C. Segment iSCSI traffic to a physically separate network.
- D. Configure Volume Groups to use CHAP.

Answer: D

Explanation:

Nutanix Volumes is a feature that allows users to create and manage block storage devices (volume groups) on a Nutanix cluster. Volume groups can be accessed by external hosts using the iSCSI protocol. To secure volume groups from unauthorized access, Nutanix recommends configuring CHAP (Challenge-Handshake Authentication Protocol) for each volume group in Prism Element. CHAP is a security feature that authenticates iSCSI initiators and targets before allowing access to a volume group. CHAP requires both the initiator and the target to have a shared secret (a password) that is used to generate a challenge and a response during the authentication process. CHAP can prevent unauthorized access to volume groups and protect data from malicious attacks. References: Nutanix Volumes Administration Guide, page 25; Nutanix Volumes Security Guide Nutanix's best practices for Volumes security emphasize securing iSCSI connections through authentication.

Configuring Volume Groups to use CHAP ensures that only authorized initiators can access the storage, preventing unauthorized access and aligning with security compliance requirements. This is a direct and mandatory step for securing Volumes, making it the best choice among the options.

Exact Extract from Nutanix Documentation:

From the Nutanix Volumes Administration Guide (available on the Nutanix Portal):

"To align with Nutanix best practices for security, configure Volume Groups to use CHAP (Challenge- Handshake Authentication Protocol) for iSCSI authentication. This ensures that only authorized initiators can access the Volume Group, protecting against unauthorized access and enhancing security."
